# 内容提要

基于同名的 Cisco 全球培训课程，针对 CCNA 考试，本书内容涵盖了 ICND 课程的所有主题。全书分为五大部分：

- Cisco 网络基础，包括设备的装配、布线、操作、配置和管理；
- Catalyst 交换机互连，主要讲述基本交换操作与 VLAN 配置；
- Cisco 路由器互连，包括 TCP/IP、IP 路由、流量管理以及 IPX 配置；
- 将网络扩展成 WAN，包括序列对等连接、ISDN BRI、帧中继 PVC 连接；
- 附录，包括 AppleTalk、超级终端、Cisco700 系列路由器、口令恢复技术。

另外，每章最后配有复习题，帮助你更好地理解关键概念。

本书可以帮助读者顺利通过 Cisco CCNA 认证考试，也可以作为网络互联领域工作的参考书籍。

---

# About the Editor

**Steve McQuerry**, CCIE No. 6108, is a certified Cisco Systems instructor who works as a contract instructor and consultant throughout the U.S., teaching networking professionals how to configure and integrate Cisco equipment into their networks. Steve also holds CNE, MCSE, MCT, CCNP, and CCNA certifications. He has worked in the networking industry for over 10 years and has experience with multiple protocols in small and large networks, including TCP/IP and IPX. Steve currently teaches the Cisco courses ICND, ACRC, CIT, and CLSC with Global Knowledge.

## About the Technical Reviewers

**Elan Beer**, CCIE No. 1837. As president and founder of Synaptic Solutions Inc., for the past 14 years, Elan has held several key positions within the telecommunications industry, including senior telecommunications consultant, project manager, and telecommunications instructor, as well as Canadian training manager with GeoTrain Corporation, a multinational training and consulting organization. Through his global consulting and training engagements, Elan is recognized internationally as a telecommunications industry expert. Elan's strong technical skills have enabled him to attain several top-level industry certifications.

As one of the first product-based public certified Cisco instructors in the world, Elan has utilized his expertise in multiprotocol internetworking, LAN, WAN, and MAN technology, network management, and software engineering to provide training and consulting services to many of Canada's top companies. As a senior trainer and course developer, Elan has designed and presented intensive public and implementation-specific technical courses for clients in North America, Europe, Australia, Africa, Asia, and Scandinavia.

**Shawn Coville**, a double CCIE (CCIE No. 4432) in Routing and Switching and ISP-Dial, is a consultant and instructor for Chesapeake Computer Consultants, where he regularly teaches several Cisco router courses, including ICND, ACRC, BCRAN, and MCNS, as well as Check Point Firewall courses. In his consulting position, Shawn has gained extensive, practical experience in the installation and configuration of Cisco routers, PIX Firewall, and Cisco AS5200 access servers. Before joining Chesapeake, Shawn worked as a senior computer specialist for the U.S. Information Agency, where he was responsible for a worldwide Lotus Notes deployment and local-area network support, as well as Internet access installation.

**David Hucaby**, CCIE No. 4594, is a senior network consultant for The Information Connection, where he provides consulting and troubleshooting services for a variety of clientele. He has extensive design, implementation, and management experience with switched and routed enterprise networks using Cisco Catalyst switches, routers, firewalls, VPNs, and IP telephony products. He has implemented network operations center services for multiple clients. Prior to his current position, David designed, implemented, and maintained networks for the University of Kentucky Hospital using Cisco routers and switches and IBM devices. David has a B.S. and M.S. in Electrical Engineering from the University of Kentucky.

**Stephen Wisniewski** has a master's degree in telecommunications management from Stevens Institute of Technology. His numerous network certifications include Microsoft MCSE, Novell CNE, Cisco CCNA, and Cisco CCNP. Stephen teaches telecommunications part-time at Devry Institute in North Brunswick, New Jersey, and he travels the world installing Cisco WAN networking implementations for Net2Phone Inc. Stephen resides in East Brunswick, New Jersey, with his wife, Ellen.

---

# Dedications

I would like to dedicate this work to Becky, Katie, Logan, and Cameron, for the love, support, and understanding that only a family could offer.

# Acknowledgments

I would like to acknowledge all of those who have been instrumental in making this book possible:

Cisco WWT and the course developers: Keith Serrao, Ilona Serrao, Pat Lao, Joe Bagg, Gary Hauser, and Diane Teare.

Everyone at Cisco Press, especially Amy Lewis, Brett Bartow, and Chris Cleveland, for all the patience they showed and guidance they offered during this process.

The technical editors—Elan Beer, Shawn Coville, Dave Hucaby, and Steve Wisniewski—for all their comments and suggestions. Their expertise and sharp eyes have been critical in providing a “sanity check” for me during the editing of this book.

All the students and instructors I have had the pleasure of teaching and working with over the past few years. Your questions, comments, and challenges offered many of the tips, cautions, and questions for this book.

My family, for their patience and understanding during this project and all of my projects.

God, for giving me the skills, talents, and opportunity to work in such a challenging and exciting profession.

---

# Foreword

*Interconnecting Cisco Network Devices* is a Cisco authorized, self-paced learning tool that helps you understand foundation concepts covered on the Cisco Certified Network Associate (CCNA) exam. This book was developed in cooperation with the Cisco Internet Learning Solutions group, the team within Cisco responsible for the development of the CCNA exam. As an early-stage exam preparation product, this book presents detailed and comprehensive coverage of the tasks that network engineers need to perform to build and support small- to medium-sized networks. Whether you are studying to become CCNA certified or are simply seeking to gain a better understanding of the products, services, and policies that enable you to build multirouter, multigroup Internetworks, you will benefit from the information presented in this book.

Cisco Systems and Cisco Press present this material in text-based format to provide another learning vehicle for our customers and the broader user community in general. Although a publication does not duplicate the instructor-led or e-learning environment, we acknowledge that not everyone responds in the same way to the same delivery mechanism. It is our intent that presenting this material via a Cisco Press publication will enhance the transfer of knowledge to a broad audience of networking professionals.

Cisco Press will present other books in the Certification Self-Study Series on existing and future exams to help achieve Cisco Internet Learning Solutions Group's principal objectives: to educate the Cisco community of networking professionals and to enable that community to build and maintain reliable, scalable networks. The Cisco Career Certifications and classes that support these certifications are directed at meeting these objectives through a disciplined approach to progressive learning.

In order to succeed with Cisco Career Certifications and in your daily job as a Cisco certified professional, we recommend a blended learning solution that combines instructor-led training with hands-on experience, e-learning, and self-study training. Cisco Systems has authorized Cisco Learning Partners worldwide, which can provide you with the most highly qualified instruction and invaluable hands-on experience in lab and simulation environments. To learn more about Cisco Learning Partner programs available in your area, please go to [www.cisco.com/go/authorizedtraining](http://www.cisco.com/go/authorizedtraining).

The books Cisco Press creates in partnership with Cisco Systems will meet the same standards for content quality demanded of our courses and certifications. It is our intent that you will find this and subsequent Cisco Press certification self-study publications of value as you build your networking knowledge base.

Thomas M. Kelly  
Vice-President, Internet Learning Solutions Group  
Cisco Systems, Inc.  
December 2002

# Introduction

Since the introduction of the personal computer in the early 1970s, businesses have found more uses and applications for technology in the workplace. With the introduction of local-area networks, file sharing, and print sharing in the 1980s, it became obvious that distributed computing was no longer a passing fad. By the 1990s, computers became less expensive, and innovations such as the Internet allowed everyone to connect to computer services worldwide. Computing was becoming big and distributed. The days of punch cards and greenbar paper are behind us, and a new generation of computing experts is being asked to keep this distributed technology operational. These experts are destined to have a new set of issues and problems to deal with, the most complex of them being connectivity and compatibility between differing systems and devices.

The primary challenge with data networking today is to link multiple devices' protocols and sites with maximum effectiveness and ease of use for the end users. Of course, this must all be accomplished in a cost-effective way. Cisco Systems offers a variety of products to give network managers and analysts the ability to face and solve the challenges of internetworking. As networking professionals begin working with this equipment to create solutions, they must understand how to use and configure these devices. Cisco Worldwide Training (WWT) develops courses to help networking professionals learn the fundamentals of configuring and installing Cisco products. This book is based on the Cisco WWT course Interconnecting Cisco Network Devices (ICND). ICND is a combination of and replaces two Cisco Courses: CRLS (Cisco Routers and LAN Switches) and ICRC (Introduction to Cisco Router Configuration). It also draws from CLSC (Cisco LAN Switch Configuration). ICND results in a single course that covers Cisco switches and routers in a realistic environment.

This book is based on the course materials. It presents the concepts, commands, and practices required to configure Cisco switches and routers in multiprotocol internetworks. You will find information that will help you identify and recommend the best Cisco solutions for small to medium-sized businesses. You will be introduced to all the basic configuration procedures required to build a multirouter, multigroup internetwork that uses LAN and WAN interfaces for the most commonly used routing and routed protocols. ICND provides the installation and configuration information that technical support people require to install and configure Cisco products.

This is an introductory-level book designed for people who have one to three years of internetworking experience, who are familiar with basic internetworking concepts, and who have some experience with the TCP/IP protocol. This book is useful for those who are pursuing the CCNA (Cisco Certified Networking Associate) certification. Also, network administrators responsible for implementing and managing small and medium-sized business networks might find the information in this book helpful. Network support staff who perform a help desk role in a medium- or enterprise-sized company will find this a valuable resource. Finally, Cisco customers or channel resellers and network technicians entering the internetworking industry who are new to Cisco products can benefit from the contents of this book.

## Goals

Readers can expect to gain the knowledge needed to select, connect, and configure Cisco devices. You will learn the structure and terminology of the Cisco IOS (Internetwork Operating System). You will be introduced to the basic concepts of routing and Layer 2 switching, and you will learn how to select and configure Cisco devices to fill these roles in your data networks.

This book also helps you prepare for the CCNA certification, because it covers many of the topics associated with that test.

**NOTE**

Readers interested in the CCNA certification should consult the Cisco web site at <http://www.cisco.com/warp/public/10/wwtraining/certprog/lan/programs/ccna.html> for more information. To schedule a Cisco certification test, contact Sylvan Prometric at 800 204-EXAM or on the web at [www.2test.com](http://www.2test.com).

## Chapter Organization

This book is broken up into five parts. This book is designed to be read in order, because many chapters build on content from a previous chapter.

Part I “Getting Started with Cisco Networks,” includes chapters that contain an overview of networking and Cisco devices. Chapter 1, “Internetworking Concepts Overview,” reviews some basic internetworking concepts. Chapter 2, “Assembling and Cabling Cisco Devices,” explores the physical connections needed to assemble network devices. Chapter 3, “Operating and Configuring a Cisco IOS Device,” explains the concepts and structure of the Cisco Internetwork Operating System. Chapter 4, “Managing Your Network Environment,” discusses topics such as Telnet, configuration file management, and Cisco Discovery Protocol, which help you control and manage network devices.

Part II, “Interconnecting Catalyst Switches,” explores the operation and configuration of the Catalyst 1900 switch. Chapter 5, “Catalyst 1900 Switch Operations,” discusses basic switch theory, including IEEE 802.1 Spanning-Tree Protocol. This chapter also discusses basic switch configuration. Chapter 6, “Extending Switched Networks with Virtual LANs,” explores the theory and operation of virtual LANs and interswitch VLAN configurations. This chapter includes discussions of Inter-Switch Link (ISL) trunking and the Virtual Trunking Protocol (VTP).

Part III, “Interconnecting Cisco Routers,” looks at the interconnectivity between networks using Layer 3 protocols such as TCP/IP and IPX. Chapter 7, “Interconnecting Networks with TCP/IP,” provides an overview of the TCP/IP protocol suite, including discussions of basic IP subnetting. This chapter also details how to configure IP addresses on your router interfaces. In Chapter 8, “Determining IP Routes,” you learn how a router provides connectivity between the different networks in an internetwork. You also learn how routers exchange and maintain routing information using distance vector routing protocols such as the Routing Information Protocol (RIP) and Cisco’s Interior Gateway Routing Protocol (IGRP). Chapter 9, “Basic IP Traffic Management with Access Lists,” discusses the control of IP traffic. This chapter discusses the need to effectively manage IP traffic in the internetwork and shows you how access lists provide traffic management on Cisco routers. The final chapter in this part, Chapter 10, “Configuring Novell IPX,” looks at the operation and configuration of Novell’s Internetwork Packet Exchange (IPX) protocol. This chapter discusses IPX addressing, routing, and traffic control.

Part IV, “Extending the Network to WANs,” looks beyond the local-area network (LAN) and discusses connecting devices across wide geographic locations. Chapter 11, “Establishing Serial Point-to-Point Connections,” provides an overview of wide-area networking (WAN) connectivity. This chapter discusses methods of connecting to remote sites using leased lines with protocols such as PPP (Point-to-Point Protocol) and HDLC (High-Level Data Link Control). This chapter also discusses PPP options such as authentication. In Chapter 12, “Completing an ISDN BRI Call,” you learn how to establish a dial-on-demand circuit to a remote site using Integrated Services Digital Network (ISDN) circuits. This chapter shows how this digital technology can be used to provide on-demand access to and from remote sites. Finally, in Chapter 13, “Establishing a Frame Relay PVC Connection,” you learn how to connect remote sites through Frame Relay services. This chapter discusses the Frame Relay terminology, concepts, and parameters required to allow connectivity between remote locations.

Part V, “Appendixes,” is the final part of this book. It begins with Appendix A, “Configuring AppleTalk,” which discusses addressing, routing, and configuring routers connected to an AppleTalk network. Appendix B, “Establishing

a HyperTerminal Session,” walks you through the process of connecting your router to a PC or laptop for configuration purposes. Appendix C, “Cisco 700 Series Routers,” examines the configuration and operation of the Cisco 700 series Small Office/Home Office (SOHO) router. In Appendix D, “Password Recovery,” you learn how the configuration register is used to restore administrative control for a router. Finally, Appendix E, “Answers to Review Questions,” provides answers to the review questions at the end of each chapter.

## Features

This book features actual router and switch output to aid in the discussion of the configuration of these devices. There are also many notes, tips, and cautions spread throughout the text. In addition, you will find many references to standards, documents, books, and web sites that will help you understand networking concepts. At the end of each chapter, your comprehension and knowledge are tested by review questions prepared by a Cisco Certified Systems Instructor.

---

### NOTE

The operating systems used in this book are Cisco IOS Version 12.0 for the routers and Cisco Catalyst 1900/2820 Enterprise Edition Software Version V8.01.01 for the switch.

# Contents

<b>Part I</b>	Getting Started with Cisco Networks	2
<b>Chapter 1</b>	Internetworking Concepts Overview	4
	Defining Network Components	5
	Mapping Business Needs to a Hierarchical Model	7
	Access Layer	8
	Distribution Layer	9
	Core Layer	9
	OSI Reference Model Overview	10
	Upper Layers	10
	Lower Layers	11
	Communicating Between OSI Reference Model Layers	12
	Physical Layer Functions	14
	Physical Media and Connectors	15
	Collision/Broadcast Domains	16
	Data Link Layer Functions	18
	MAC Sublayer Frames	19
	LLC Sublayer Frames	20
	Data Link Layer Devices	21
	Network Layer Functions	24
	Network Layer Addresses	24
	Router Operation at the Network Layer	26
	Transport Layer Functions	28
	OSI Lower Layer Review	30
	Selecting Cisco Products	32
	Cisco Hub Products	34
	Catalyst Switch Products	35
	Cisco Router Products	36
	Summary	38
	Review Questions	38
<b>Chapter 2</b>	Assembling and Cabling Cisco Devices	40
	Cabling the LAN	41
	LAN Physical Layer Implementations	43
	Positioning Ethernet in the Campus	44

Comparing Ethernet Media Requirements	45
Differentiating Between Connections	46
UTP Implementation	47
Cabling the Campus	52

Cabling the WAN	53
WAN Physical Layer Implementations	55
Differentiating Between WAN Serial Connections	55
Cabling Routers for Serial Connections	57
Cabling Routers for ISDN BRI Connections	62
Setting Up Console Connections to Cisco Devices	64
Summary	65
Review Questions	65

## **Chapter 3**      Operating and Configuring a Cisco IOS Device    66

Basic Operation of Cisco IOS Software	67
Operations upon Router/Switch Startup	68
Router/Switch Configuration Locations	68
IOS Command Modes	69
What Happens When You Start a Switch	70
Catalyst Switch Status LEDs	71
Logging On to a 1900 Switch After Startup	74
Keyboard Help in Switch Command-Line Interface	75
Context-Sensitive Help for Switches	76
Console Error Messages for Switches	77
Command History Buffer for Switches	77
Commands to Get Basic Switch Information	78
<b>show version</b> Command	78
<b>show running-configuration</b> Command	79
<b>show interfaces</b> Command	80
<b>show ip</b> Command	82
Configuring the Switch from the Command Line	82
What Happens When You Start a Router	83
Initial Router Configuration	84
Modifying Router Configuration	89
Keyboard Help in Router Command-Line Interface	91
Context-Sensitive Help for Routers	92
Console Error Messages for Routers	92
Command History Buffer for Routers	93

- Using CLI Help Features Example 94
- Enhanced Editing Mode: Editing Key Functions 96

- Commands to Get Basic Router Information 98
  - show version** Command 98
  - show running-configuration** and **show startup-configuration** Commands 98

- Configuring a Router from the Command Line 99
  - Additional Useful Console Commands 104
  - Configuring Router Interfaces 104

Summary 110

Review Questions 110

## **Chapter 4** Managing Your Network Environment 112

- Getting Information About Neighboring Devices 113
  - Displaying General Information About Neighboring Devices 115
  - Displaying CDP Information About a Device 115
  - Displaying CDP Information About Neighboring Devices 116
  - Displaying Detailed CDP Information About Neighboring Devices 118
  - Displaying Information About Device Traffic 119
  - Displaying Configuration Information and Interface Status for a Device 120

- Getting Information About Remote Devices 120
  - Establishing a Telnet Session to a Remote Device 120
  - Verifying and Displaying Active Telnet Sessions 121
  - Suspending, Re-Establishing, and Ending Active Telnet Sessions 122

Documenting the Network with the ping and traceroute Commands 123

- Router Booting Sequence and Verification Commands 124
  - Router Booting Sequence 124
  - Router Components 125
  - ROM Microcode 126
  - Loading/Running the Router Configuration 131
  - Managing Router Configurations with copy Commands 132
  - IOS File System 135
  - Moving/Managing Router Configuration Files 136

- Managing IOS Images 137
  - Backing Up Your IOS Image File 138
  - Loading a New IOS Image File from the Network Server 139
