Acknowledgments

First, we would like to collectively thank those who agreed to examine earlier drafts of the book—anatomists, educators, and student members of the editorial review board from around the world. Your input was invaluable.

We'd also like to thank Richard Tibbitts and Paul Richardson for their skill in turning our visual ideas into a reality that is not only a foundation for the acquisition of anatomical knowledge, but also is beautiful.

Thanks must also go to Bill Schmitt, Rebecca Gruliow, Frank Morales and all the team at Elsevier for guiding us through the preparation of this book.

We'd also like to thank Professor Richard A. Buckingham of the Abraham Lincoln School of Medicine, University of Illinois for the provision of Fig. 8.109B. Finally, because we worked separately, distanced by, in some cases, thousands of miles, there are various people who gave local support, whom we would like to make mention of individually. We've gratefully listed them here:

Dr Leonard Epp, Dr Carl Morgan, Dr Robert Shellhamer, and Dr Robert Cardell who profoundly influenced my career as a scientist and an educator.

Richard L. Drake
Dr Sydney Friedman, Dr Elio Raviola, and Dr Charles Slonecker, for their inspiration and support, and for instilling in me a passion for the discipline of Anatomy;

Dr Murray Morrison, Dr Joanne Matsubara, Dr Brian Westerberg, Laura Hall, and Jing Cui, for contributing images for the chapter on the head and neck; and Dr Bruce Crawford and Logan Lee, for help with images for the surface anatomy of the upper limb.
Professor Elizabeth Akesson and Dr Donna Ford, for their enthusiastic support and valuable critiques.

A. Wayne Vogl
Anne Gayle, for her unsurpassed secretarial support; Professor Philip Gizhen, for help in sourcing images, and his general support; Dr Dominic Blunt and Chrissie Hill, for assistance in providing images;

Dr Mareesh Patel, for help with reading manuscripts and with the clinical questions;

Radiology SpRs and radiographers at the Charing Cross Hospital;

Radiographers at the Wellington Hospital;

Dr Anwar Padhani, at the Mount Vernon Hospital;

Dr Alison Graham and Dr Paul Tait, at the Hammer-smith Hospital; and

Mr Andrew Williams, at the Chelsea and Westminster Hospital.

Dr Neil Fraser, Dr Martin Watson, Dr Kim Fox, Dr Jerry Healy, Dr James Jackson, and Mr Ian Franklin also deserve my thanks.

Adam W. M. Mitchell

Dedications

To my wife, Cheryl,
who has supported me;
and my parents who have guided me.

Richard L. Drake

To my family,
to my professional colleagues
and role models,
and to my students—
this book is for you.

A. Wayne Vogl

To Cathy, Max (Adder),
and Elsa (ZaZa).

Adam W. M. Mitchell

Preface

The first edition of *Gray's Anatomy for Students* accomplished many of the goals we had established for this textbook, including our primary goal of helping students learn anatomy. However, we realized from the many suggestions, comments, and kind advice we received from colleagues and students around the world that there were modifications and changes that would improve this textbook. So keeping in mind the goals and objectives of the first edition, we began work on the second edition by evaluating all of the input from our readers, assessing changes occurring in the educational environment, and doing our best to predict the future direction of anatomy education. The result is the second edition of *Gray's Anatomy for Students*, which builds on the past and looks toward the future.

One of the most significant changes in the second edition of our textbook occurs in Chapter 1. This chapter has been retitled “The Body” and not only includes the material from Chapter 1 of the first edition, such as “What is anatomy?” and “Imaging” but also has a new section, entitled “Body systems.” This new section provides students with an overview of the skeletal system, skin and fascias, the muscular system, the cardiovascular system, the lymphatic system (material moved from Chapter 4 of the previous edition), and the nervous system (material moved from Chapter 2 of the first edition). The information is concise in its presentation, and its clinical significance is emphasized by the addition of numerous examples of common clinical problems.

Another significant change in this edition involves the presentation of clinical material. While “In the Clinic”

boxes are still presented throughout the textbook, usually at the end of a section of material so as not to destroy the readability of the textbook, we have also highlighted clinically relevant information throughout the textual material. This technique, while maintaining the book's readability, provides the student with a rapid locator of clinical “pearls of wisdom.” Thus, throughout the textbook, material in “pastel green,” whether in boxes or text, signals clinical information—pay particular attention.

Finally, the index has been completely restructured and provides the reader with a more convenient and useful tool for finding information. We have also added a concise table of contents at the beginning of each chapter to further assist the reader in the location of specific topics. Additionally, a large number of the clinical images and pictures used in the first edition have been upgraded. Many of them have been replaced with higher quality examples and imaging from newly emerging technologies. Smaller changes in this second edition include modifying some of the artwork, adding some new artwork, and moving the 10 short questions at the end of each chapter to Student Consult online.

We feel that with these changes the second edition of *Gray's Anatomy for Students* is a much improved version of the first edition, and we hope that the book will continue to be a valuable learning resource for students.

January 2009

About the book

The idea

In the past 20 years or so, there have been many changes that have shaped how students learn human anatomy in medical and dental schools and in allied health programs, with curricula becoming either more integrated or more systems based. In addition, instructional methods focus on the use of small group activities with the goals of increasing the amount of self-directed learning, and acquiring the skills for the life-long acquisition of knowledge. An explosion of information in every discipline has also been a force in driving curricular change as it increases the amount to be learned without necessarily increasing the time available. With these changes, we felt it was time for a new text to be written that would allow students to learn anatomy within the context of many different curricular designs, and within ever-increasing time constraints.

We began in the fall of 2001 by considering the various approaches and formats that we might adopt, eventually deciding upon a regional approach to anatomy with each chapter having four sections. From the beginning, we wanted the book to be designed with multiple entry points, to be targeted at introductory level students in a broad spectrum of fields, and to be a student-oriented companion text for *Gray's Anatomy*, which is aimed at a more professional audience. We wrote the text first and subsequently constructed all the artwork and illustrations to complement and augment the words. Preliminary drafts of chapters, when complete, were distributed to an international editorial board of anatomists, educators, and anatomy students for review. Their comments were then considered carefully in the preparation of the final book.

The text is not meant to be exhaustive in coverage, but to present enough anatomy to provide students with a structural and functional context in which to add further detail as they progress through their careers. *Gray's Anatomy* was used as the major reference, both for the text and for the illustrations, during the preparation of this book, and it is the recommended source for acquiring additional detail.

The book

Gray's Anatomy for Students is a clinically oriented, student-friendly textbook of human anatomy. It has been prepared

primarily for students in a variety of professional programs (e.g., medical, dental, chiropractic, and physical therapy programs). It can be used by students in traditional, systemic, combined traditional/systemic, and problem-based curricula and will be particularly useful to students when lectures and laboratories in gross anatomy are minimal.

Organization

Using a regional approach, *Gray's Anatomy for Students* progresses through the body in a logical fashion, building on the body's complexities as the reader becomes more comfortable with the subject matter. Each chapter can be used as an independent learning module, and varying the sequence will not affect the quality of the educational experience. The sequence we have chosen to follow is back, thorax, abdomen, pelvis and perineum, lower limb, upper limb and head and neck.

We begin with the back because it is often the initial area dissected by students. The thorax is next because of its central location and its contents (i.e., the heart, the great vessels, and the lungs). This also begins a progression through the body's cavities. The abdomen and pelvis and perineum follow logically in sequence from the thorax. Continuing downward toward the feet, the lower limb is next, followed by the upper limb. The last region discussed is the head and neck. This region contains some of the most difficult anatomy in the body. Covering all other regions first gives the student the opportunity to build a strong foundation from which to understand this complex region.

Content

Each regional anatomy chapter consists of four consecutive sections: conceptual overview, regional anatomy, surface anatomy, and clinical cases.

The conceptual overview provides the basis on which information in the later sections is built. This section can be read independently of the rest of the text by students who require only a basic level of understanding and can also be read as a summary of important concepts after the regional anatomy has been mastered.

The regional anatomy section provides more detailed anatomy along with a substantial amount of relevant clinical correlations. It is not an exhaustive discussion

but instead provides information to a level that we feel is necessary for understanding the organization of the region. Throughout this section, two levels of clinical material are provided. Clinical hooks are fully integrated with the main anatomical text and function to relate (“hook”) the anatomy discussed directly to a clinical application without taking students out of their train of thought and without disrupting the flow of the text. Although fully integrated with the anatomical text, these passages are differentiated from it by the use of green highlighting. “In the Clinic” summaries provide students with useful and relevant clinical information demonstrating how applying anatomical knowledge facilitates the solving of clinical problems. These are spread throughout the text close to the most relevant anatomical discussion.

Surface anatomy assists students in visualizing the relationship between anatomical structures and surface landmarks. This section also provides students with practical applications of the anatomical information, combining visual inspection with functional assessment, as occurs during any type of patient examination.

The final section of each chapter consists of clinical cases. These cases represent the third level of clinical material in the book. In these cases the clinical problem is described, and a step-by-step process of questions and answers leads the reader to the resolution of the case. The inclusion of these cases in each chapter provides students with the opportunity to apply an understanding of anatomy to the resolution of a clinical problem.

Illustrations are an integral part of any anatomy text. They must present the reader with a visual image that brings the text to life and presents views that will assist in the understanding and comprehension of the anatomy. The artwork in this text accomplishes all of these goals. The illustrations are original and vibrant, and many views are unique. They have been designed to integrate with the text, present the anatomy in new ways, deal with the issues that students find particularly difficult, and provide a conceptual framework for building further understanding. To ensure that the illustrations of the book work together and to enable students to cross-refer from one illustration to another, we have used standard colors throughout the book, except where indicated otherwise.

artery

vein

nerve

lymphatic

sympathetic fiber

parasympathetic fiber

preganglionic fiber (solid)

postganglionic fiber (dotted)

The position and size of the artwork was one of the parameters considered in the overall design of each page of the book.

Clinical images are also an important tool in understanding anatomy and are abundant throughout the text. Examples of state-of-the-art medical imaging, including MRIs, CTs, PETs, and ultrasound as well as high-quality radiographs, provide students with additional tools to increase their ability to visualize anatomy in vivo and, thus, increase their understanding.

What the book does not contain

Gray's Anatomy for Students focuses on gross anatomy. While many curricula around the world are being presented in a more integrated format combining anatomy, physiology, histology, and embryology, we have focused this textbook on understanding only the anatomy and its application to clinical problems. Except for some brief references to embryology where necessary for a better understanding of the anatomy, material from other disciplines is not included. We felt that there are many outstanding textbooks covering these subject areas, and that trying to cover everything in a single book would produce a text of questionable quality and usefulness, not to mention enormous size!

Terminology

In any anatomical text or atlas, terminology is always an interesting issue. In 1989, the Federative Committee on Anatomical Terminology (FCAT) was formed and was charged with developing the official terminology of

the anatomical sciences. The *Terminologia Anatomica* (Thieme, Stuttgart/New York, 1998) was a joint publication by this group and the 56 member associations of the International Federation of Associations of Anatomists (IFAA). We have chosen to use the terminology presented in this publication in the interest of uniformity. Other terminology is not incorrect; we just felt that using terminology from this single, internationally recognized source would be the most logical and straightforward approach.

Although we use anatomical terms for orientation as much as possible, we also use terms such as “behind” or “in front of” occasionally to make the text more readable. In these cases, the context clarifies the meaning.

Anatomical use of adverbs

During the writing of this book, we had many long discussions about how we were going to describe anatomical relationships as clearly as possible, but maintain the readability of the text. One issue that arose continually in our discussions was the correct use of the “-ly” adverb form of anatomical orientation terms, such as anterior, posterior, superior, inferior, lateral, and medial. We reached the following consensus:

-ly adverbs *e.g., anteriorly, posteriorly*, have been used to modify (describe) verbs in passages where an action or direction is mentioned. For example, “The trachea passes inferiorly through the thorax.”

circumstantial adverbs, *e.g., anterior, posterior*, have been used to indicate the fixed location of an anatomical feature. For example, “The trachea is anterior to the esophagus.”

Furthermore, both usages may occur in the same passage. For example, “The trachea passes inferiorly through the thorax, anterior to the esophagus.”

We have very much enjoyed the process of putting this book together. We hope that you enjoy using it to the same degree.

Index of clinical content

1 The body

In the Clinic

- Determination of skeletal age 16
- Bone marrow transplants 17
- Bone fractures 18
- Avascular necrosis 18
- Osteoporosis 19
- Epiphyseal fractures 20
- Degenerative joint disease 24
- Joint replacement 26
- The importance of fascias 27
- Muscle paralysis 28
- Muscle atrophy 28
- Muscle injuries and strains 28
- Atherosclerosis 29
- Varicose veins 30
- Anastomoses and collateral circulation 30
- Lymph nodes 33
- Dermatomes and myotomes 40
- Referred pain 52

Clinical Case

- Appendicitis 53

2 Back

In the Clinic

- Spina bifida 76
- Vertebroplasty 77
- Scoliosis 77
- Kyphosis 78
- Variation in vertebral numbers 78
- The vertebrae and cancer 79
- Osteoporosis 79
- Back pain 81
- Herniation of intervertebral discs 81
- Joints 82
- Ligamenta flava 84
- Vertebral fractures 84
- Pars interarticularis fractures 85
- Surgical procedures on the back 86
- Spinal fusion 86

- Nerve injuries affecting superficial back muscles 101

- Lumbar cerebrospinal fluid tap 108

- Herpes zoster 110

- Back pain—alternative explanations 111

Clinical Cases

- Sciatica versus lumbago 118

- Cervical spinal cord injury 118

- Psoas abscess 119

- Dissecting thoracic aneurysm 119

- Sacral tumor 121

3 Thorax

In the Clinic

- Breast cancer 139
- Cervical ribs 147
- Collection of sternal bone marrow 147
- Rib fractures 147
- Surgical access to the chest 156
- Chest drain (tube) insertion 156
- Imaging the lungs 174
- High-resolution lung CT 174
- Bronchoscopy 174
- Lung cancer 175
- Pericarditis 179
- Pericardial effusion 179
- Constrictive pericarditis 180
- Valve disease 191
- Clinical terminology for coronary arteries 194
- Coronary artery disease 196
- Common congenital heart defects 197
- Cardiac auscultation 197
- Cardiac conduction system 200
- Ectopic parathyroid glands in the thymus 206
- Venous access for central and dialysis lines 208
- Using the superior vena cava to access the inferior vena cava 209
- Coarctation of the aorta 210
- Thoracic aorta 210
- Aortic arch and its anomalies 211

Abnormal origin of great vessels 211
 The vagus nerves, recurrent laryngeal nerves, and hoarseness 214
 Esophageal cancer 217
 Esophageal rupture 217
Clinical Cases
 Cervical rib 233
 Lung cancer 234
 Chest wound 234
 Myocardial infarction 235
 Broken pacemaker 238
 Coarctation of the aorta 238
 Aortic dissection 239
 Pneumonia 240
 Esophageal cancer 241
 Venous access 242

4 Abdomen

In the Clinic

Surgical incisions 269
 Cremasteric reflex 288
 Masses around the groin 290
 Inguinal hernias 290
 Femoral hernias 291
 Umbilical hernias 291
 Incisional hernias 291
 Other hernias 291
 Peritoneum 294

 Diaphragmatic hernias 354
 Hiatus hernia 355
 Urinary tract stones 361
 Urinary tract cancer 361
 Nephrostomy 363
 Kidney transplant 364
 Investigation of the urinary tract 366
 Abdominal aortic stent graft 369
 Inferior vena cava filter 371
 Retroperitoneal lymph node surgery 373

Clinical Cases

Traumatic rupture of the diaphragm 391
 Chronic thrombosis of the inferior vena cava 391
 Liver biopsy in patients with suspected liver cirrhosis 392
 Hodgkin's lymphoma 393
 Inguinal hernia 394
 Ureteric stone 395
 Intra-abdominal abscess 395
 Complications of an abdominoperineal resection 396
 Carcinoma of the head of the pancreas 398
 Caval obstruction 399
 Diverticular disease 400
 Endoleak after endovascular repair of abdominal aortic aneurysm 401
 Gastrointestinal bleed 401
 Metastatic lesions in the liver 403

5 Pelvis and perineum

In the Clinic

Locating the position of the femoral artery 421

Using the femoral artery for angiography and endovascular procedures 421

Using the femoral vein for pulmonary angiography 421

Bone marrow biopsy 424

Pelvic fracture 426

Common problems with the sacro-iliac joints 428

Pelvic measurements in obstetrics 433

Defecation 435

Episiotomy 439

Digital rectal examination 439

Carcinoma of the colon and rectum 441

Bladder stones 443

Suprapubic catheterization 443

Bladder cancer 444

Bladder infection 446

Urethral catheterization 447

Testicular tumors 448

Vasectomy 450

Prostate problems 451

Ovarian cancer 455

Imaging the ovary 455

Hysterectomy 456

Tubal ligation 457

Carcinoma of the cervix and uterus 457

The recto-uterine pouch 460

Pudendal block 466

Prostatectomy and impotence 471

Abscesses in the ischio-anal fossae 480

Hemorrhoids 482

Urethral rupture 490

Clinical Cases

Varicocele 504

Sciatic nerve compression 505

Pelvic kidney 505

Left common iliac artery obstruction 506

Iatrogenic ureteric injury 507

Ectopic pregnancy 508

Uterine tumor 509

6 Lower limb

In the Clinic

Pelvic fractures 528

Blood supply to the femoral head and neck 532

Femoral neck fractures 532

Femoral shaft fracture 532

Varicose veins 544

Deep vein thrombosis 544

Vascular access to the lower limb 547

Intramuscular injections 553

Muscle injuries to the lower limb 569

Peripheral vascular disease 572

Chronic leg ischemia 572

Acute on chronic ischemia 572

Critical limb ischemia 572

Soft tissue injuries to the knee 582

Degenerative joint disease/osteoarthritis 582

Examination of the knee joint 583

Neurological examination of the legs 592

Fracture of the talus 606

Midfoot fractures 606

Ankle fractures 608

Bunions 611

Morton's neuroma 626

Clinical Cases

Varicose veins 638

Knee joint injury 639

Fracture of neck of femur 642

Deep vein thrombosis 643

Ruptured calcaneal tendon 644

Popliteal artery aneurysm 645

Anterior talofibular ligament tear 646

7 Upper limb

In the Clinic

Fracture of the proximal humerus 668

Fractures of the clavicle and dislocations of the acromioclavicular and sternoclavicular joints 673

Dislocations of the glenohumeral joint 674

Rotator cuff disorders 675

Quadrangular space syndrome 682

Damage to the long thoracic nerve 690

Imaging the blood supply to the upper limb 698

Trauma to the arteries of the upper limb 699

Fracture of rib I 699

Anterior dislocation of the humeral head 699

Subclavian pinch-off syndrome 699

Injuries to the brachial plexus 709

Breast cancer 711

Rupture of biceps tendon 716

Blood pressure measurement 720

Radial nerve injury in the arm 724

Median nerve injury in the arm 724

Elbow joint injury 727
 Supracondylar fracture of the humerus 728
 Transection of the radial or ulnar arteries 728
 Pulled elbow 728
 Fracture of the head of radius 728
 Epicondylitis 728
 Elbow arthritis 729
 Ulnar nerve injury 729
 Construction of a dialysis fistula 731
 Fractures of the radius and ulna 734
 Fracture of the scaphoid and avascular necrosis of the proximal scaphoid 756
 Carpal tunnel syndrome 758
 Snuffbox 759
 Allen's test 770
 Venipuncture 770
 Ulnar nerve injury 772
 Radial nerve injury 774

Clinical Cases

Shoulder problem after falling on an outstretched hand 786
 Winged scapula 786
 Brachial plexus nerve block 787
 Complication of a fractured first rib 787
 Carpal tunnel syndrome 788
 Immobilizing extensor digitorum 789
 Torn supraspinatus tendon 789
 How to examine the hand 790
 Shoulder joint problem 791

8 Head and neck

In the Clinic

Medical imaging of the head 828
 Fractures of the skull vault and extradural hematoma 829
 Depressed skull fractures 829
 Compound fractures 829
 Pterion fractures 829
 Hydrocephalus 834
 Meningitis 835
 Brain tumors 835
 Stroke 839
 Intracerebral aneurysms 840

Head injury 845
 Types of intracranial hemorrhage 845
 Clinical assessment of patients with head injury 847
 Treatment of head injury 847
 Cranial nerve lesions 855
 Parotid gland 865
 Facial nerve [VII] palsy (Bell's palsy) 872
 Central lesions 872
 Lesions at and around the geniculate ganglion 872
 Lesions at and around the stylomastoid foramen 872
 Trigeminal neuralgia 873
 Scalp laceration 877
 Horner's syndrome 882
 Surgically-induced Horner's syndrome 882
 Examination of the eye 892
 Loss of innervation of the muscles around the eye 892
 Glaucoma 899
 Cataracts 899
 Ophthalmoscopy 900
 Examination of the ear 905
 Tympanic membrane perforation 906
 Mastoiditis 909
 Lingual nerve injury 935
 Dental anesthesia 937
 Fascial planes of the head and neck 952
 Central venous access 953
 Jugular venous pulse 961
 Thyroid gland 967
 Thyroidectomy 967
 Thyroid gland pathology 968
 Clinical lymphatic drainage of the head and neck 985
 Tracheostomy 1009

Clinical Cases

Multinodular goiter 1071
 Parotid duct calculus 1072
 Extradural hematoma 1073
 Stenosis of the internal carotid artery 1074
 Posterior communicating artery aneurysm 1075
 Recurrent epistaxis 1076
 Complication of orbital fracture 1077
 Brainstem tumor 1078
 Pituitary macroadenoma 1079
