Advisory Committee

Honorary Chairman

Sun Fuling, Vice-President, CPPCC

Chairman

Du Qinglin, Minister, Ministry of Agriculture (MOA), P. R. China

Vice Chairmen

Fan Xiaojian, Vice-Minister (MOA)

Liu Yanhua, Vice-Minister, Ministry of Science and Technology (MOST)

Lu Liangshu, Academician, Former Vice-President, Chinese Academy of Engineering

Zhai Huqu, President, Chinese Academy of Agricultural Sciences (CAAS)

Suh Kyu-yong, Administrator, Rural Department Administration (RDA), Korea

Jiang Shuren, President, China Agricultural University (CAU)

Wang Maohua, Academician, China Agricultural University (CAU)

Yasushi Hashimoto, President, Japanese Society of Agricultural Information(JSAI)

V.C.Patil, President, Indian Society of Agricultural Information Technology (INSAIT)

International Organizing Committee

Chairman

Mei Fangquan, Elected President of AFITA (China)

Vice Chairmen

Seishi Ninomiya Secretary-General of AFITA (Japan)

Bambang Pramudya, Vice-President, AFITA (Indonesia)

Yoo-Han Song, Vice-President, AFITA (Korea)

Jia Shangang, Member of AFITA (China)

Rick Sutton, Officer of FAO (Rome)

Pisuth Paiboonrat, NECTEC (Thailand)

Kamarudin Saadan, MARDI (Malaysia)

International Academic Committee:

Chairman

Weon-sik Hahn, President of AFITA (Korea)

Vice Chairmen

Byong-Lyol Lee, Secretary-General of AFITA (Korea)

Shen Zuorui, Vice-President of AFITA (China)

Jane Lin, Vice-President of AFITA (Taiwan, China)

Takemi Machida, Vice-President, AFITA (Japan)

Xu Shiwei, Director-General, SDIC/CAAS (China)

Yon-Chan Choi, Secretary of KSAI (Korea)

Felino P. Lansigan, UPLB (Philippines)

Preface

The Third Asian Conference of Federation for Information Technology in Asia (AFITA) jointly organized by the Chinese Academy of Agricultural Sciences(CAAS) and AFITA is a great assembly of totally more than 200 experts in information technology and information management in agriculture from over 30 countries in Asia and other continents. This grand occasion will surely produce far-reaching influence on the research and development of information science in agriculture.

In recent years, the amazing development of information and communication technologies (ICTs) has greatly changed the ways we do our business and the environment we live. The constant innovation and development of Internet resource controlling and searching systems, expert systems, GIS, RS, GPS, precision agriculture, simulation models, DSS, and data mining, database technology, digital libraries, as well as E-commerce are all important contributions to the world agricultural economy. ICTs in developing countries in Asia has achieved significant progresses while in developed countries it has reached a higher level in some major areas and obtained rich experiences. In such a favorable developmental environment, AFITA 2002 Conference has been an important opportunity for exchanging views and experiences on ICT and information/knowledge management, and for facilitating stronger collaboration among Asian countries as well as others.

The more and more newly produced methods and means in IT and IM by various countries need revelation and extension for their effectively and efficient use. From the enthusiasm of all the participants, we may see that the significance of the conference and the necessity of cooperation in the fields.

The conference proceedings cover 114 papers within comprehensive areas in IT and IM. The invited keynote speeches have given overall introductions in the development of main fields in IT and IM that are representative contributions from agricultural sector to the information society. From the dedicated papers of the conference and real practice of various countries, I would like to put further to stress that IT and IM are indeed strategic partners for innovation, progress, and success in the electronic and knowledge age emphasizing "global economy". I hope that this partnership will be strongly enhanced among various countries.

I really feel honored to be entrusted by the AFITA to organize this meeting and sincere appreciations should be given to friends and colleagues who helped to make the conference to be successful. I agree with the view that we are fortunate to live in such exciting times when there are so many technological tools available for us to experiment and use. The progress in information technology has truly transformed every aspect of our lives particularly in agricultural areas. And both challenges and opportunities facing us are many and we need to work together more closely to make further achievements to the development of agricultural economy in the future.

Prof. Mei Fangquan
Elected Chairman of AFITA

Contents

Preface

Keynote Speeches

A Study on the Grain and Food Security and Early Warning System in China <i>Mei Fangquan</i> , China.....	(3)
Development of IT in Agriculture in Korea <i>Weon-Sik Hahn</i> , Korea.....	(9)
Effective Information Management and Dissemination in the Electronic Era <i>Elizabeth Dodsworth</i> , CABI.....	(14)
A Normative Model for Agricultural Research Information System <i>Ajit Maru</i> , ISNAR.....	(19)
Network Computing for Agricultural Information Systems -GRID for Agricultural Decision Support <i>Seishi Ninomiya</i> , Japan.....	(26)
A Comprehensive Framework for Building Multilingual Domain Ontologies: Creating a Prototype Biosecurity Ontology <i>Boris Lauser, Tanja Wildemann, Allison Poulos, Frehwot Fisseha and Johannes Keizer</i> , FAO.....	(31)
IT for Rural Agriculture and Rural Development <i>Pisuth paiboonrat</i> , Thailand.....	(42)

Part I Policy and Strategy for IT in Agriculture

<i>Jia Shangang</i> , China.....	(59)
The Innovation in Developmental Strategy of Agri-Information Service Industry (AISI) in China Joining WTO <i>Hu Haiyan</i> , China.....	(62)
ICT Capacity-building for Development and Poverty Alleviation Enhancing the Role of Agricultural Universities in China <i>Royal D. Colle</i> , USA and <i>Liu Yonggong</i> , China.....	(67)
Present Status of Agricultural Information Technology Systems and Services in Bangladesh <i>M. A. Zaman</i> , Bangladesh.....	(75)
Using ICTs in Ethiopian Agriculture: An Issue of both Development and Survival <i>Yared Mammo</i> , Ethiopia.....	(84)
The Development and Prospect of China's Agriculture Information Service <i>Miao Xiaoyan and Niu Wenjuan</i> , China.....	(87)
Thinking about "the Rural Internet Project" <i>Ding jianhua, Xin xianjie, Zhang ping, Sun supeng and Shao wenzhao</i> , China.....	(92)
France and its Agriculture: Advancing towards Informationization <i>Chen Guoxiu</i> , China.....	(96)
Case Analysis and Development Direction of Agricultural Informatization in Southwest China's National Minority Regions <i>Li Xiao, Qiu Dunlian and Song Xia</i> , China.....	(101)
How to Enable Peasants to Span Numeral Gap <i>Sun Sufen, Liu Yuexian, Luo Changshou, Guo Jianxin and Zhang Junfeng</i> , China.....	(105)
Measurements for Levels of the Local Information, and Taking-Over of Digital Divide <i>Norihito Nakamura</i> , Aikoku Gakuen University, Yotsukaido, Japan.....	(109)
Risk Information and Eventual Learning of Smallholder Farmers in Eastern Ethiopia <i>Belaineh Legesse</i> , Ethiopia.....	(114)
The Strategies for Building Agriculture Web Sites <i>Zheng Ye Lu, Huang Liang, Zhou Can Fang, Xu Yi Fei, Li Jun Sheng and Hou Jian Guo</i> , China.....	(132)
Information seeking and utilisation among agricultural researchers in Nigeria <i>Oladele, Idowu</i> , Nigeria.....	(137)
On the Current Situation of Agri-Information Network Construction in Henan Province and its Development Suggestion	

<i>Zhang Lian-hong and Ren Jinkai, China</i>	(142)
Developments and Applications of Agricultural Information Technology of China <i>Xia Tongshui and Zhao Yuanfeng, China</i>	(146)
Practice and explore on shrinking disparity of a great gulf fixed of number between developing peasants and developed peasants <i>Jiang Yu-mei, Yang Feng and Li Yi-xian</i> China.....	(152)
The Research and Practical Use of Modern Distance Education Technology in Beijing Agrotechnical Extending and Information Service for Rural Area <i>Guo Jianxin and Sun Sufen, China</i>	(155)
WTO & Information Agriculture <i>Jiang Hongtao, Tan Ping and Shi Weiwei, China</i>	(161)
Pondering on Development of Agricultural Information in China <i>Wang Youmin and Gao Fei, China</i>	(163)
Suggestions on the Construction of the New Agricultural Service System in 21 st Century by means of Informatization <i>Li Yong, China</i>	(168)
Analysis and Design of Knowledge Management System A Case Study — Analysis and Design of Knowledge Management System in SDIC/CAAS <i>Li Sijing, China</i>	(172)

Part II Information Resource and Database

Orientation of Topic Selection for Agricultural Database & Principle of Building Up the Database <i>Gao Fei and Miao Xiaoyan, China</i>	(181)
Construction of Marine Resource Database for Empowering Small Scale Fishermen <i>Setyo Pertiwi, John Haluan and T. Ersti Yulika Sari, Indonesia</i>	(185)
Information System of Fish Germplasm Resources in China <i>Yang Ningsheng, Ge Chanshui and Ouyang Haiying, China</i>	(190)
Construction of Information Resource and Database on Pesticide and Pest Control <i>Wen-Chi Fei, Taiwan, China</i>	(194)
Construction of Sustainable Collection of Free Web Resources <i>Li Yunjing, Xue Ximei, Pei Xinyong and Guo Suqing, China</i>	(198)
A Study on Development and Use of Internet-based Agricultural Information Resources <i>Zhang Yu-e, China</i>	(203)
On Exploitation Strategy of Information Resources at Agricultural Universities Libraries <i>Su Pasha, China</i>	(208)
Construction and Management of Agricultural Information Network <i>Zhao Yuanfeng and Xia Tongshui, China</i>	(212)
Construction of Data Resources and Design and Application of Search System in Chinese Feed Network Database <i>Xiong Ben-hai, Luo Qing-yao and Peng Zhi-hong, China</i>	(217)
Strategy and Management of Information/Knowledge in Agriculture: The UPLiBNet Experience <i>Anday, V. G. Tallada, J. G. and Saul, C. dL. Philippines</i>	(222)
Analysis on the Key Factors of Making Use of Agricultural Sci-tech Information <i>Zhan Huilong and Liu Yan, China</i>	(226)
Using XML Encoding Agricultural Resource Data for Sharing and Interoperability <i>Wencai Du, China</i>	(230)
Construction and Management of Sci-tech Information Resources System in Provincial Academy of Agricultural Sciences <i>Gao Chun-xin, Zhang Ying, Zhang Du-ling, Wang Jian-fei and Qin Lei-lei, China</i>	(234)
The Construction and Management of Agricultural Science and Technology Database in China <i>Meng Xianxue, China</i>	(239)
Discussion on Establishment of Agricultural Information System of Henan Province <i>Xue Ximei and Zhang Ying, China</i>	(242)
Optimization of the Functions of Web Database of Chinese Journals <i>Xing Yonghua, China</i>	(246)

The Function of Multi-medium and Internet in the Rural Information Services in the Developing Country <i>Zhang Cheng-gang, Zhao Na, Gu Tian and Yue Yu-lan, China</i>	(250)
--	-------

Part III Modeling and Decision Support System

Studies on the Cotton Production Management System based on the CottonPlus model for Xinjiang and Huang-Huai-Hai cotton regions in China <i>Qiu Jianjun, Xiao Yingnan, and Dai Yiming, China</i>	(257)
Estimating rooting day of transplanted paddy rice for prediction of developmental stage <i>Ryoji Sameshima, Japan</i>	(262)
Growth Prediction of a Transplant Population Using Artificial Neural Networks Combined with Image Analysis <i>He Dongxian, China, M. Hirafuji and T. Kozai, Japan</i>	(266)
Decision Support System for Nitrogen Fertilizer Optimization Using Rice Growth Simulation Model <i>Ri-Xian Cui, China; Anh T. Nguyen, Min-Ho Kim, Dong-Yun Lee, Jin-Dong Fu and Byun-Woo Lee, Korea</i>	(272)
Maize Cultivational Simulation-Optimization-Decision Making System, MCSODS <i>Zheng GuoQing, Duan ShaoFen and Zhang RuiLing, China</i>	(278)
DEMBroker - Consistent Access for Software Applications to Digital Elevation Models <i>Matthew Laurensen and Seishi Ninomiya, Japan</i>	(285)
Framework for Constructing Agricultural Models using Java <i>Kei Tanaka, Matthew Laurensen and Masayuki Hirafuji, Japan</i>	(289)
Development of Decision Support System Using GP Modelbase for Rural Food Processing Enterprises <i>Chung-Sil Kim and Jae-Hwa Park, Korea</i>	(293)
Systems approach to exploratory analysis of agricultural land use options in Ilocos Norte Philippines <i>Felino P. Lansigon, Philippine</i>	(297)
Feasibility Study on Highly Value-added Cropping Systems in Snowy Cold Areas <i>Shintaroh Ohashi, Kazuhiro Nakano and Yoshitaka Motonaga, Japan</i>	(304)
A Web Application for Soil Nitrogen Balance Estimation <i>Sugahara, Koji, Yoshiharu Ueda, Takashi Kusaba and Kenzo Miura, Japan</i>	(309)
Development of Virtual Food Concept Based on Multi-Layer Consciousness and its Role in Food Consumption <i>Jae Kun Chun, Korea</i>	(312)
Information Aspects of Manufacturing, Registering and Distributing the Antiparasitic Avermectin Drugs for Veterinary and Crop Protection Use <i>Alexander Victorov and Victor Drinyaev, Russia</i>	(316)
The Research of Agriculture Knowledge Service System Based on Internet <i>Zhou Guomin, Qiu yun and Zhou Yitao, China</i>	(320)
Web-based Agricultural ScienTech Information Services Fundamental Platform <i>Ping Qian, China</i>	(322)
The development of the DSS based on GIS for regional agricultural management <i>Cheng Yongzheng, China</i>	(327)

Part IV Expert System

Development of Improved Crop Coefficients for Precise Estimates of Wheat Evapotranspiration <i>Raj Vir Singh and S.R. Bhakar, India</i>	(333)
A Study On Development Of Intelligent Irrigation Systems For Melon Cultivation In Greenhouse <i>Kazuhiro Nakano and Takako Aida, Japan</i>	(338)
Integrated Information System for Farm Management Consulting <i>Park, Seok-young, Korea</i>	(343)
KISAN: An Expert System for Soil Nutrient Management <i>Rajkishore Prasad, B.R.Ambedkar Bihar and A.K Sinha, India</i>	(346)
Preliminary Research on the Method of Identifying Accuracy of Agricultural Expert System	

<i>Zhang Liping</i> , China.....	(354)
Use of Personal Digital Assistants (PDAs) in Agricultural Extension Programs <i>Fedro S. Zazueta, Pete Vergot and Howard Beck</i> , USA.....	(358)
A Study on Animal Feed Formulation System Based on Internet Remote and Interaction <i>Xiong Ben-hai, Luo Qing-yao and Pang Zhi-hong</i> , China.....	(363)
Achieving IPM by IT: State-of-the-Art and Prospects <i>ZuoRui Shen</i> , China.....	(368)
Information Consulting Service under Network Environment <i>Zhang Xiaoqing</i> , China.....	(371)
T-Vet: An Tele-Diagnosis System for Fish Disease <i>Daoliang Li, Tao Hu and Zetian Fu</i> , China.....	(374)
Knowledge Warehouse: A web-based Integrated Information System for Fresh Water Aquaculture <i>Daoliang Li and Zetian Fu</i> , China, <i>Yanqing Duan</i> , UK.....	(379)
Applications of Aquaculture Expert System and its Developing Prospects <i>Wang Ruimei, Fu Zetian and Mu weisong</i> , China.....	(384)
Evaluation of the Water Quality of Aquaculture Pond Expert System <i>Wang Ruimei, He Youyuan and Fu Zetian</i> , China.....	(390)
Study on Construction of Knowledge Base in Fish Disease Diagnosis Expert System <i>Zhang Xiaoshuan, Fu Zetian and Wen Jiwen</i> , China.....	(398)

Part V Field Data Acquisition and Record

Architecture of Field Monitoring Servers <i>Masayuki Hirafuji and Tokihiro Fukatsu</i> , Japan.....	(405)
Field Server Gateway: Gateway box for Field Monitoring Servers <i>Takuji Kiura</i> , Japan.....	(410)
Massively Distributed Monitoring System Application of Field Monitoring Servers using XML and Java Technology <i>Tokihiro Fukatsu, Masayuki Hirafuji and Takuji Kiura</i> , Japan.....	(414)
A Study on the Development of Kit Connecting the Measuring Instruments to the Internet <i>Ryouei Ito and Takashi Mishima</i> , Japan.....	(418)
Sensing and Information System for Cultivation Traceability in the Farm <i>Takaharu Kameoka and Atsushi Hashimoto</i> , Japan.....	(421)
Development of a New System to Accumulate On-Site and Real-Time Farming Database <i>Kazunari Yokoyama, Masayuki Hirafuji and Hiroyuki Yoshida</i> , Japan.....	(426)
Studies on the Automatic Journal System for Field Work by using GPS Work Identification by Fuzzy Theory <i>Takahiro Kamiya and Takemi Machida</i> , Japan.....	(429)
Studies on Development of Work Journal Supporting Systems with Speech Recognition <i>Kazunari Matsumoto and Takemi Machida</i> , Japan.....	(434)
Mid-Infrared Spectroscopic Quantification of Ionic Dissociative Materials in Living Body <i>Tao Pan, Kenichi Nakanishi, Atsushi Hashimoto and Takaharu Kameoka</i> , Japan.....	(439)
Automatic Grain Quality Inspection with Learning Mechanism <i>Ye.-Nu. Wan</i> , Taiwan, China.....	(445)

Part VI Information Mapping and GIS

Using GIS for Facilitating Sediment Yield Estimation <i>I.Sumathi and S. Santhana Bosu</i> , India.....	(453)
Local Level Agricultural Planning Using GIS <i>Md Bilal Hossain, Anwar Sadat and A. F. M. Mesbah Uddin</i> , Bangladesh.....	(457)
Agricultural Disaster Management System <i>Ling Sun, Zhiqing Jin, Yu Liu and Jilin Zhang</i> , China.....	(463)
Development of Spatial Distribution Maps in a Grid of 50 m for Weather Resources Using the Weather Data of an Agricultural Network System in Conjunction with the Geographical Factors <i>Makoto Kawai</i> , Japan.....	(468)

Developing an Agricultural, Environmental, and Natural Resources Mapping and Decision Support system (DSS) for Southeast Asia <i>David B. Hannaway & Christopher Daly et al., USA, Alan Cooper & Roger Kraynick, Thailand</i>	(473)
Remote Sensing, Geographical Information System and Precision Farming in India: Opportunities and Challenges <i>V.C.Patil, Ajit Maru, G.B.Shashidhara and U.K.Shanwad, India</i>	(478)
Scalable and Interoperable Agriculture Products Information System Based on WebGIS Using XML and SVG Technologies <i>Wencai Du and Han Yong, China</i>	(484)
Towards a Web-Based Watershed-Level Rural Land Use Planning <i>J. Adinarayan, India; Matthew Laurensen and Seishi Ninomiya, Japan</i>	(489)
Generality for Precision Agriculture and Practice in China <i>Liu Jintong, Cai Hong and Xie Gaodi, China; Seishi Ninomiya, Japan</i>	(491)
Study on the interpretation of the cropping area of winter wheat in Henan province based on 3S technology <i>Liu Ting, Cheng Yongzheng and Ren, Yinling, China</i>	(496)
Agriculture & Precision Agriculture <i>Ma Guilian, Jiang Hongtao and Zhang Qin, China</i>	(500)

Part VII Digital Library and Multilingual Translation and Thesaurus

Digital Libraries and Knowledge Management: Basis for Agricultural Scitech Innovation <i>Pan Shuchun, China</i>	(507)
A Case Study on the Digital Library Initiatives in Zhejiang University <i>Zhao Jihai, China</i>	(510)
Development of E-mail System for Informational Exchange Among Farmer, Researcher, and Extension Worker <i>Keun-Seop Shim, Weon-Shik Hahn and Cheol-Hee Lee, Korea</i>	(514)
Internet-Based Summarization and Translation for Agricultural Information <i>Asanee Kawtrakul, Prachya Boonkwan Sunt and Dechapakorn, Thailand</i>	(518)
Development of Japanese Morphological Analysis Server cooperating with Agricultural Thesaurus Server <i>Daisuke Horyu, Tokihiro Fukatsu, Akira Otuka, Takuji Kiura, Seishi Ninomiya and Masayuki Hirafuji, Japan</i>	(523)
The Translation of Agricultural Multilingual Thesaurus <i>Chang Chun and Lu Wenlin, China</i>	(526)
On the Characteristics of the Digital Library and the Influence to the Work of Reader Service <i>Wu Baohua, Miao Xiaoyan and Gao Fei, China</i>	(529)
Bridging the Digital Divide inside China <i>Wang Wensheng, China</i>	(533)

Part VIII Pattern Recognition and Visualization and E-Commerce

Visualization of Forest Landscapes by VRML <i>Tsuyoshi Honjo and En-Mi Lim, Japan</i>	(549)
WTO and Agricultural E-Commerce <i>Chen Yu-He, Qin Su-Ping and Li Chun-hua, China</i>	(555)
E-commerce in the Czech Agriculture <i>Jiřina Šlaisová and František Vaníček, Czech</i>	(559)
Developing Agricultural Market through a Regional Information System: the IFDC-Africa experience in Africa <i>Raoul A. Klutse, Togo</i>	(564)

Information System of Agriculture for Supporting Market and Trade Promotion in Agriculture and Forest Production <i>Tran Thi Ngan Hoa and Nguyen Hong Son, Vietnam</i>	(573)
A Decision-Oriented Market Information System for Forest and Agro-Forest Products in India <i>Vasant P. Gandhi, India</i>	(578)
Shape Evaluation by Digital Camera for Grape Leaf <i>Hiroya Kondou, Hatuyoshi Kitamura, Yutaka Nishikawa, Yoshitaka Motonaga, Atsushi Hashimoto, Kenichi Nakanishi and Takaharu Kameoka, Japan</i>	(586)
Measuring Geometrical Features of Insect Specimens using Image Analysis <i>Xinwen Yu & Zuorui Shen, China; Seishi Ninomiya, Japan</i>	(591)
Identification of Beef Cattle by Analyzing Images of their Muzzle Patterns Lifted on Paper <i>H. Minagawa, T. Fujimura, M. Ichiyonagi and K. Tanaka, Japan</i>	(596)
Study on Web-based Agricultural Information System Development Method <i>Ruixue Zhao, China</i>	(601)

KEYNOTE SPEECHES

A Study on China's Grain and Food Security and Early Warning System

Prof. Mei Fangquan *

Honourable Director-General, Institute of Information, MOA, China

Honourable Director-General, Sciencetech Documentation and Information Center (CAAS)

Vice-President, State Food and Nutrition Consultant Committee (SFNCC), China

President, Chinese Association of Agricultural Sciencetech Information (CAASI)

Elected President, Asian Federation of Information Technology in Agriculture (AFITA)

Abstract: China's grain and food security is a priority area that is focused by Chinese people and government as well as all over the world. The first prototype early warning system for grain and food security in China was researched and developed by this Study. Food security and early warning system contains basic theory analysis, database system, forecasting simulation model system, sign warning system. A soft system based on Internet was developed, and the function of food security early warning was realized basically, and then to prevent risk and solve problems by implementing the short forecasting and dialog between person and computer.

Keywords: China; Grain and Food Security; Early Warning System

Food security and early warning system in China is always the important work for Chinese government, it is also the focus of the international concern. It takes significant role to establish the grain and food security and early warning system when the management function of government has changed and China's agriculture has faced new situations.

In the research, food security and early warning system contains basic theory analysis, database system, forecasting simulation model system, sign warning system and internet for system function. The purpose of this research is to recognize the situations of the food security and to warn early.

I. The Methodology of the Food Security and Early Warning System

1. Systematical analysis on the theory of the food security and early warning system.
2. Select index of situation in food security (or insecurity) and set up the index system.
3. Determine the warning limit of the degree of food insecurity (every degree is defined in upper limit and lower limit) .
4. Select and decide the signal index of food security or insecurity, that is, the forerunner or synchronous index of warning situations.
5. Forecast or simulate the index of food security situation
6. Analysis on the index of food security situation and overall index and estimate the degree of food security or insecurity, then use the different signal (red, yellow, green white and blue light) to forecast the degree of warning.
7. When there has been or potentially exist the risk, especially serious risk in food security, trace back to the sign indicators and the tendency of related variables, seek the reasons to cause the food insecurity (or unbalance in food demand and supply), find alternative measurement and policy, and then, simulate and forecast the result of implement of the policy, so to avoid the situation that influence on the food security.

* Team members: Zhang Xianshu, Huang Jikun, Fang Yu, Li Zhiqian, Zhou Guoming, Nie Fengying, Zhang Qiao, Qing Fu, Li Weike, Ma Jiujie, etc.

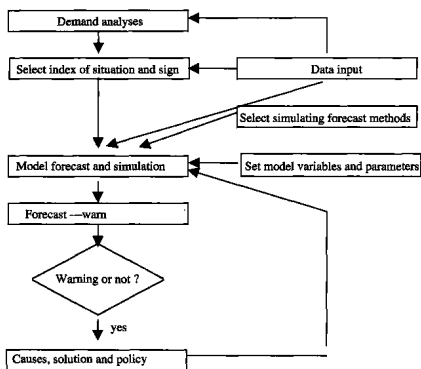

Figure1. Framework of Layout and Methodology in Food Security and Early Warning

Methodology:

1. In the index of food security, the qualitative method is used to analyze the concept of grain and food security, measuring index and warning index, and descriptive statistics to determine the warning limits.

2. The cluster analysis, matrix analysis, time trend analysis, auto-regression moving average, sector equilibrium model and food balance sheet are used in the warning models. C++ language is applied to write the software, which can have various functions such as analysis on different variables, sorting, policy stimulation, forecasting and warning. The expert questionnaire is used to analyze the condition of production of grain and prosperity.

3. In the data warehouse and network, TNG, firewall and safety inspecting technology are applied. Data is transformed and integrated in clear way and data base is programmed again according to criterion of data warehouse. The data relationship are change into star type of data structure.

4. Multimedia technique is applied to establish food security and early warning system and software, provide a platform with a friendly interface.

There are four parts in the grain and food security and early warning system: basic theory of the grain and food security and early warning system, warning index system, warning modeling and database and network for warning.

II. Basic Theory of Grain and Food Security and Early Warning System

In this part, the concept of food security is defined. The food security can be classified as long term and short term food security, macro and micro food security, production and marketing food security.

There are four characteristics in food security: historic, regional, variable and systematic. According to the characteristics, food security index can be divided into two groups: one is called basic quantitative index (e.g. balance between demand and supply), another is degree qualitative one (e.g. production variability).

There are various patterns of food security in the world. Four alternatives can be chose to achieve the goal of food security: total independency model, total free trade model, mainly independency model and
