**清华大学出版社
北京**

内 容 简 介

本书采用中、英文对照编排形式,结合近年来“机械设计”课程教学改革的特点编写而成,立足培养面向 21 世纪的高级工程应用型人才,并紧紧围绕以“学”为中心,以“素质提高”为目的的指导思想,力求简明精练、覆盖面广。

本书可以作为普通高等院校机械类本科生或者专科生的双语教材,也可供工程技术人员学习和参考。

Foreword

The bilingual teaching is becoming a trend for our higher education to interface with the world and to face various challenges of the new century. The reform in bilingual teaching is a strategic choice for our higher education in the twenty-first century. This book provides a solid base for bilingual teaching and meets the immediate needs of our higher education reform for interfacing with the world.

This book was written based on the current practices and needs of education reform in teaching machine design. It targets for fostering application-oriented talents for the twenty-first century. The development of the book is focused on center learning activities and aims at quality education. The contents of the book cover selected topics simplified and extracted for a wide range of readers. The book has the following characteristics:

(1) The bilingual edition represents the outcomes of higher education reform in teaching materials and curriculum development for the 21st century. It emphasizes on the training of application-oriented talents with international views and quality education in basic engineering subjects.

(2) This book is targeted for practical applications with a particular emphasis on the applicability. It emphasizes on basic theory closely related to practical engineering applications. At the end of each chapter, a typical example of design is given. It also emphasizes on comprehensive training in the development of methodologies, bilingual capability and quality education.

(3) The book adopts the newly published national standards.

The figures quoted by the Chinese part of this book are not drawn repeatedly. Please refer to the corresponding English part.

The authors of this book are: PAN Chengyi (Chapter 1, Chapter 2, Chapter 3, Chapter 5, Chapter 6, Chapter 7, Chapter 11, Chapter 12, Chapter 13, Chapter 14 and Appendix), XIANG Jingzhong (Chapter 4 and Chapter 10) and SONG Xin (Chapter 8 and Chapter 9).

Due to various limitations, this book may contain mistakes and all critics and corrections from all experts and readers are welcome.

前　　言

双语教学是我国高等教育与国际接轨、迎接新世纪挑战和教育改革发展的必然趋势，也是中国高等教育在 21 世纪必须作出的战略选择。本教材的编写为双语教学创造了一个良好的条件，及时地满足了高等教育与国际接轨这一教育改革形式发展的需要。

本书是结合近年来“机械设计”课程教学改革的特点编写而成的。它立足培养面向 21 世纪的高级工程应用型人才，紧紧围绕以“学”为中心，以“素质提高”为目的的指导思想，力求简明精练、覆盖面广。本教材具有如下特点：

(1) 采用中、英文对照编排形式，充分体现高等教育面向 21 世纪教学内容和课程体系改革的成果，立足于与国际接轨的高级应用型人才培养的特点，重视基本工程素质教育。

(2) 以实用为主导，突出实用性，重点突出了与工程应用密切相关的基本理论，每章末都提供了典型设计例题，重视方法、双语能力、技能等综合素质的培养。

(3) 全书采用了最新颁布的国家标准。

本书中文部分所引插图没有另行绘制，均请参照相应英文部分。

本书的作者有：潘承怡（第 1 章、第 2 章、第 3 章、第 5 章、第 6 章、第 7 章、第 11 章、第 12 章、第 13 章、第 14 章及附录），向敬忠（第 4 章、第 10 章），宋欣（第 8 章、第 9 章）。

由于编者水平有限，书中难免有错误和疏漏，敬请各位专家及广大读者批评指正。

Contents(目录)

Chapter 1	Introduction	1
1. 1	Subjects of This Course	1
1. 2	Features of This Course	1
1. 3	Nature of This Course	2
1. 4	The Process of Machine Design	2
1. 5	Design Criteria of Machine Elements	3
1. 6	Standardization of Machine Elements	6
1. 7	Machine Designer's Responsibility	6
第1章	绪论	8
1. 1	本课程的研究对象	8
1. 2	本课程的特点	8
1. 3	本课程的性质	8
1. 4	机械设计的程序	9
1. 5	机械零件的设计准则	9
1. 6	机械零件的标准化	11
1. 7	机械设计人员的责任	11
Chapter 2	Threaded Joints	13
2. 1	Overview	13
2. 1. 1	Thread Manufacturing	13
2. 1. 2	Thread Elements	13
2. 2	Principal Types of Screw Joints and Screw Fasteners	15
2. 2. 1	Principal Types of Screw Joints	15
2. 2. 2	Screw Fasteners	16
2. 2. 3	Materials and Capacity Grades of Screw Fasteners	17
2. 3	Screw Tightening and Locking	18
2. 3. 1	Screw Tightening	18
2. 3. 2	Locking of Screw Joints	19
2. 4	Strength Calculations for Screw Joints	21
2. 4. 1	Strength Calculations for Tension-Loaded Bolted Joints	21
2. 4. 2	Strength Calculations for Bolted Joints Loaded in Shear	24
2. 5	Load Analyses of Bolt Groups	24
2. 6	Methods for Increasing the Strength of Bolted Joints	29

第 2 章 螺纹连接	31
2.1 概述	31
2.1.1 螺纹的形成	31
2.1.2 螺纹的要素	31
2.2 螺纹连接的主要类型和螺纹紧固件	32
2.2.1 螺纹连接的主要类型	32
2.2.2 螺纹紧固件	32
2.2.3 螺纹紧固件的材料和性能等级	33
2.3 螺纹的拧紧和防松	33
2.3.1 螺纹的拧紧	33
2.3.2 螺纹连接的防松	34
2.4 螺纹连接的强度计算	35
2.4.1 受拉伸载荷螺栓连接的强度计算	35
2.4.2 受剪切载荷螺栓连接的强度计算	37
2.5 螺栓组连接的受力分析	37
2.6 提高螺栓连接强度的措施	40
Chapter 3 Key Joints	41
3.1 Parallel Key Joints	41
3.2 Woodruff Key Joints	42
3.3 Taper Key Joints	43
3.4 Joints with Tangent Double-Taper Keys	44
3.5 Strength Calculations of Parallel Key Joints	44
第 3 章 键连接	47
3.1 平键连接	47
3.2 半圆键连接	47
3.3 楔键连接	48
3.4 切向键连接	48
3.5 平键连接强度计算	48
Chapter 4 Belt Drives	51
4.1 Overview	51
4.2 V-belts and V-belt Pulleys	52
4.2.1 Specification for Standard Series V-belts	52
4.2.2 V-belt Pulleys	53
4.3 Forces and Stresses in Belts	55
4.3.1 Forces in Belts	55
4.3.2 Stresses in Belts	56
4.4 Creep and Speed Rate in Belt Drives	57

4.4.1 Creep of Belt Drives	57
4.4.2 Speed Rate of Belt Drives	58
4.5 V-belt Drive Design	58
4.5.1 Failure and Design Criteria of Belt Drives	58
4.5.2 Strength Calculation of V-belt Drives	58
4.5.3 Design Procedure and Factor Choice for V-belt Drives	60
4.5.4 Tensioning Device of V-belt Drives	64
第4章 带传动	67
4.1 概述	67
4.2 V带与V带轮	67
4.2.1 标准系列V带的规格	67
4.2.2 V带轮	68
4.3 带传动的受力与应力分析	69
4.3.1 带传动的受力分析	69
4.3.2 带传动的应力分析	70
4.4 带传动的弹性滑动与传动比	70
4.4.1 带传动的弹性滑动	70
4.4.2 带传动的传动比	71
4.5 V带传动的设计	71
4.5.1 带传动的失效形式与设计准则	71
4.5.2 V带传动的强度计算	71
4.5.3 V带传动的设计步骤与参数选择	73
4.5.4 V带传动的张紧装置	76
Chapter 5 Chain Drives	78
5.1 Overview	78
5.1.1 Features of Chain Drives	78
5.1.2 Principal Types of Chains	79
5.1.3 Principal Types of Power Transmission Chains	79
5.2 Roller Chains	79
5.3 Kinematic Characteristics of Chain Drives	81
5.3.1 Average Chain Velocity and Speed Ratio	81
5.3.2 Instantaneous Chain Velocity and Speed Ratio	81
5.3.3 Impact Loads in Chain Drives	82
5.4 Design of Chain Drives	83
5.4.1 Types of Failure and Rated Power of Chain Drives	83
5.4.2 Principal Parameters Selection of Chain Drives	85
5.4.3 Forces Acting on the Shafts of Chain Drives	85
5.5 Lubrication of Chain Drives	85

第 5 章 链传动	88
5.1 概述	88
5.1.1 链传动特点	88
5.1.2 链的主要种类	88
5.1.3 传动链的主要类型	88
5.2 滚子链	89
5.3 链传动的运动特性	89
5.3.1 链的平均速度与平均传动比	89
5.3.2 链的瞬时速度与瞬时传动比	90
5.3.3 链传动的动载荷	90
5.4 链传动的设计	90
5.4.1 链传动的失效形式与额定功率	90
5.4.2 链传动主要参数的选择	92
5.4.3 链传动中作用于轴上的力	92
5.5 链传动的润滑	93
Chapter 6 Toothed Gearing	95
6.1 Overview	95
6.2 Principal Types of Toothed Gearing	95
6.3 Types of Tooth Failure and Design Criteria	96
6.3.1 Types of Tooth Failure	96
6.3.2 Design Criteria of Gearing	98
6.4 Gear Materials	98
6.5 Force Analysis for Gearing	99
6.5.1 Force Analysis for Spur Gears	99
6.5.2 Force Analysis for Helical Gears	100
6.5.3 Force Analysis for Bevel Gears	101
6.5.4 Design Load	102
6.6 Strength Calculations for Spur Gearing	104
6.6.1 Contact Strength Calculations for Spur Gears	104
6.6.2 Bending Strength Calculations for Spur Gears	107
6.7 Strength Calculations for Helical Gearing	110
6.7.1 Contact Strength Calculations for Helical Gears	110
6.7.2 Bending Strength Calculations for Helical Gears	111
6.8 Strength Calculations for Bevel Gearing	112
6.8.1 Contact Strength Calculations for Bevel Gears	112
6.8.2 Bending Strength Calculations for Bevel Gears	112
6.9 Accuracy of Toothed Gearing	113
6.10 Structure of Gears	113

第 6 章 齿轮传动	118
6.1 概述	118
6.2 齿轮传动的主要类型	118
6.3 轮齿的失效形式与设计准则	118
6.3.1 轮齿的失效形式	118
6.3.2 齿轮传动的设计准则	119
6.4 齿轮材料	120
6.5 齿轮传动的受力分析	121
6.5.1 直齿轮受力分析	121
6.5.2 斜齿轮受力分析	121
6.5.3 圆锥齿轮受力分析	122
6.5.4 计算载荷	122
6.6 直齿圆柱齿轮传动的强度计算	123
6.6.1 直齿圆柱齿轮的接触强度计算	123
6.6.2 直齿圆柱齿轮的弯曲强度计算	126
6.7 斜齿圆柱齿轮传动的强度计算	127
6.7.1 斜齿轮接触强度计算	127
6.7.2 斜齿轮弯曲强度计算	127
6.8 圆锥齿轮传动的强度计算	128
6.8.1 圆锥齿轮接触强度计算	128
6.8.2 圆锥齿轮弯曲强度计算	128
6.9 齿轮传动的精度	129
6.10 齿轮的结构	129
Chapter 7 Worm Gearing	133
7.1 Characteristics and Types of Worm Gearing	133
7.1.1 Characteristics of Worm Gearing	133
7.1.2 Types of Worm Gearing	133
7.2 Principal Parameters and Geometrical Calculations of Cylindrical Worm Gearing	135
7.2.1 The Proper Meshing Condition of Cylindrical Worm Gearing	135
7.2.2 Principal Parameters of Cylindrical Worm Gearing	136
7.2.3 Geometrical Calculations of Cylindrical Worm Gearing	138
7.3 Types of Failure, Design Criteria and Materials of Ordinary Cylindrical Worm Gearing	139
7.3.1 Types of Failure	139
7.3.2 Design Criteria	139
7.3.3 Materials	140
7.4 Strength Calculations of Worm Gearing	140

7.4.1 Force Analysis of Worm Gearing	140
7.4.2 Strength Calculations of Worm Gearing	141
7.5 Efficiency, Lubrication and Calculation of Heat Balance	144
7.5.1 Efficiency of Worm Gearing	144
7.5.2 Lubrication of Worm Gearing	146
7.5.3 Heat Balance of Worm Gearing	146
7.6 Structure of Worms and Worm Gears	147
第 7 章 蜗杆传动	151
7.1 蜗杆传动的特点与类型	151
7.1.1 蜗杆传动的特点	151
7.1.2 蜗杆传动的类型	151
7.2 圆柱蜗杆传动的基本参数与几何计算	152
7.2.1 圆柱蜗杆传动的正确啮合条件	152
7.2.2 圆柱蜗杆传动的基本参数	152
7.2.3 圆柱蜗杆传动的几何计算	154
7.3 普通圆柱蜗杆传动的失效形式、设计准则及材料	155
7.3.1 失效形式	155
7.3.2 设计准则	155
7.3.3 材料	155
7.4 蜗杆传动的强度计算	155
7.4.1 蜗杆传动的受力分析	155
7.4.2 蜗杆传动的强度计算	156
7.5 蜗杆传动的效率、润滑及热平衡计算	158
7.5.1 蜗杆传动的效率	158
7.5.2 蜗杆传动的润滑	159
7.5.3 蜗杆传动的热平衡	160
7.6 蜗杆和蜗轮的结构	160
Chapter 8 Shafts	164
8.1 Overview	164
8.1.1 Types of Shafts	164
8.1.2 Shaft Materials	166
8.2 Structural Design of Shafts	166
8.2.1 Functional Requirements	167
8.2.2 Technological Requirements	168
8.2.3 Improving the Strength of Shafts	170
8.3 Strength Calculations of Shafts	171
8.3.1 Calculation of Shafts for Only Shear Stress	171

8.3.2 Calculation of Shafts for Combined Bending and Torsional Stress	172
8.3.3 Fatigue Strength Calculation of Shafts	173
第8章 轴.....	178
8.1 概述	178
8.1.1 轴的分类.....	178
8.1.2 轴的材料.....	179
8.2 轴结构设计	179
8.2.1 使用要求.....	179
8.2.2 工艺性要求.....	180
8.2.3 提高轴的强度	181
8.3 轴的强度计算	181
8.3.1 只承受剪切应力的轴计算.....	181
8.3.2 既承受弯曲应力又承受剪切应力的轴计算.....	182
8.3.3 轴的疲劳强度计算.....	183
Chapter 9 Rolling Bearings	186
9.1 Overview	186
9.1.1 Configuration of Rolling Bearings	186
9.1.2 Materials for Rolling Bearings	187
9.1.3 Advantages and Shortcomings of Rolling Bearings	187
9.2 Types of Rolling Bearings	187
9.3 Codes of Rolling Bearings (by Chinese Standard)	190
9.4 Load Distribution, Failure and Design Criteria of Rolling Bearings	191
9.4.1 Load Distribution Among the Rolling Elements	191
9.4.2 Failure Modes of the Rolling Elements	192
9.4.3 Design Criteria of the Rolling Elements	192
9.5 Rolling Bearings Life Calculations	193
9.5.1 Fatigue Life of the Rolling Bearings	193
9.5.2 Basic Rating Life, Basic Dynamic Load Rating and Basic Static Load Rating	193
9.5.3 Equivalent Dynamic Load and Equivalent Static Load	194
9.5.4 Rolling Bearings Life Calculations	195
9.5.5 Analysis of Forces Exerted on Angular-Contact Rolling Bearings	196
9.6 Design Arrangements, Lubrication and Sealing Devices for Rolling Bearings	200
9.6.1 Design Arrangements for Rolling Bearings	200
9.6.2 Preloading for Rolling Bearings	203

9.6.3 Rolling Bearings Lubrication and Sealing Devices	204
9.6.4 Mounting and Dismounting Bearings	205
第9章 滚动轴承.....	207
9.1 概述	207
9.1.1 基本构造和特点.....	207
9.1.2 滚动轴承的材料.....	207
9.1.3 滚动轴承的优缺点.....	207
9.2 滚动轴承的类型	208
9.3 滚动轴承代号(中国标准)	210
9.4 滚动轴承的载荷分布、失效与设计准则.....	211
9.4.1 滚动体间的载荷分布.....	211
9.4.2 滚动轴承的失效形式.....	211
9.4.3 滚动轴承的设计准则.....	212
9.5 滚动轴承寿命计算	212
9.5.1 滚动轴承的疲劳寿命.....	212
9.5.2 基本额定寿命、基本额定动载荷与基本额定静载荷	212
9.5.3 当量动载荷和当量静载荷	213
9.5.4 滚动轴承寿命计算.....	214
9.5.5 角接触滚动轴承的力分析.....	215
9.6 滚动轴承的组合设计、润滑与密封装置.....	217
9.6.1 滚动轴承的组合设计.....	217
9.6.2 滚动轴承的预紧.....	218
9.6.3 滚动轴承的润滑和密封装置.....	218
9.6.4 滚动轴承的装拆.....	219
Chapter 10 Sliding Bearings	220
10.1 Introduction	220
10.1.1 Types of Sliding Bearings	220
10.1.2 Field of Application	221
10.2 Constructions of Radial Sliding Bearings	221
10.2.1 Solid Bearings	221
10.2.2 Split Bearings	222
10.2.3 Automatic Center Regulating Bearings	222
10.2.4 Construction of Bushings	223
10.3 Bearing Materials	224
10.4 Lubricants	225
10.5 Calculations of Boundary-Lubricated Bearings	226
10.6 Principle of Hydrodynamic Lubrication	227
10.7 Calculations of Hydrodynamic-Lubricated Bearings	229

10.7.1 Geometrical Relations	229
10.7.2 Supporting Capacity and Load Factor	230
10.7.3 Determine the Minimum Thickness of the Oil Film	231
10.7.4 Calculation of Heat Balance	232
第 10 章 滑动轴承	235
10.1 绪论	235
10.1.1 滑动轴承的类型	235
10.1.2 滑动轴承的应用范围	235
10.2 径向滑动轴承的结构	236
10.2.1 整体式轴承	236
10.2.2 剖分式轴承	236
10.2.3 自动调心轴承	236
10.2.4 轴瓦的结构	236
10.3 轴承材料	237
10.4 润滑剂	238
10.5 边界润滑轴承计算	238
10.6 液体动力润滑原理	239
10.7 液体动力润滑轴承的计算	241
10.7.1 几何关系	241
10.7.2 承载能力与载荷系数	241
10.7.3 最小油膜厚度的确定	242
10.7.4 热平衡计算	242
Chapter 11 Couplings and Clutches	245
11.1 Introduction	245
11.2 Couplings	246
11.2.1 Rigid Couplings	246
11.2.2 Flexible Couplings	247
11.3 Clutches	250
11.3.1 Mechanically Controlled Clutches	250
11.3.2 Safety Clutches	252
第 11 章 联轴器与离合器	254
11.1 绪论	254
11.2 联轴器	254
11.2.1 刚性联轴器	254
11.2.2 挠性联轴器	255
11.3 离合器	256
11.3.1 机械操纵离合器	257
11.3.2 安全离合器	258

Chapter 12 Springs	259
12.1 Functions and Types of Springs	259
12.1.1 Functions of Springs	259
12.1.2 Types of Springs	259
12.2 Stresses and Deflection of Helical Compression and Extension Springs	259
12.2.1 Stresses in Springs	259
12.2.2 Deflection of Springs	261
12.3 Characteristic Curves of Helical Springs	261
12.4 Spring Materials and Allowable Stresses	262
12.5 Geometric Dimensions of Helical Springs	264
第 12 章 弹簧	266
12.1 弹簧的功用和类型	266
12.1.1 弹簧的功用	266
12.1.2 弹簧的类型	266
12.2 圆柱压缩、拉伸螺旋弹簧的应力与变形	267
12.2.1 弹簧中的应力	267
12.2.2 弹簧的变形	267
12.3 圆柱螺旋弹簧的特性线	268
12.4 弹簧的材料及许用应力	268
12.5 圆柱螺旋弹簧的几何尺寸	269
Chapter 13 Other Kinds of Joints	271
13.1 Pin Joints	271
13.2 Interference Fit Joints	273
13.3 Shaped Joints	275
13.4 Riveted Joints	276
13.4.1 Characteristics and Applications of Riveted Joints	276
13.4.2 Rivets and Types of Riveted Joints	277
13.4.3 Failure Types of Riveted Joints and Strength Calculations	278
13.5 Welded Joints	280
13.5.1 Types, Characteristics and Applications of Welded Joints	280
13.5.2 Styles of Welds	282
13.5.3 Strength Calculations of Welds	283
13.6 Adhesive Bonding	284
第 13 章 其他连接	287
13.1 销连接	287
13.2 过盈配合连接	288
13.3 成形连接	289

13.4 铆接.....	289
13.4.1 铆接特点及应用.....	289
13.4.2 铆钉及铆钉连接的型式.....	290
13.4.3 铆钉连接的破坏形式及强度计算.....	290
13.5 焊接.....	292
13.5.1 焊接类型、特点及应用	292
13.5.2 焊缝的式样.....	292
13.5.3 焊缝的强度计算.....	293
13.6 胶接.....	294
Chapter 14 Reducers	296
14.1 Main Types and Characteristics of Reducers	296
14.1.1 Cylindrical Gear Reducers	296
14.1.2 Bevel Gear Reducers	297
14.1.3 Worm Reducers	297
14.1.4 Planetary Gear Reducers	298
14.2 Distribution of Speed Ratio	299
14.3 Structure of Gear Reducer	302
14.4 Lubrication of Gear Reducer	303
第 14 章 减速器	305
14.1 减速器的主要型式及特点.....	305
14.1.1 圆柱齿轮减速器.....	305
14.1.2 圆锥齿轮减速器.....	305
14.1.3 蜗杆减速器.....	305
14.1.4 行星齿轮减速器.....	306
14.2 传动比分配.....	306
14.3 减速器的结构.....	308

Chapter 1 Introduction

1.1 Subjects of This Course

Machines consist of parts. Machine parts are components of machines that are manufactured without resorting to assembly operations, such as gears, band pulleys, bolts, nuts, shafts, keys and springs. There may be dozens of parts in a complex machine and even hundreds of thousands. For example, automobiles have over 15 000 parts.

Some parts are united insofar as they usually serve a single purpose. These parts operate together and structurally make up a unit, and are called units or assemblies. Typical examples of such units are couplings, clutches and bearings in their own housings.

Most types of parts are common to all machinery, and called common elements. Few parts considered as specifically designed for the machines of various purposes in which they are found, are called specific parts.

The subjects of the course “Design of Machine Elements” are the basic or more common elements. This book deals with the design and necessary calculations of components of machinery for general engineering application, as well as with certain general problems of machine design.

1.2 Features of This Course

The main features of this course are the following:

(1) Cross nature This course is a cross disciplinary subject that integrates engineering drawing, mathematics, engineering-mechanics science, materials science, machine theory, fits and tolerances, manufacturing technology, etc.

(2) Engineering nature It is an engineering subject which has a close connection with mechanical engineering, and requires continuous integration with engineering regulations and methodologies. Through the learning of the knowledge of this course, one is trained with serious working attitude, meticulous working style and their persistence in complying with related national standards.

(3) Practice nature It is a widely used practical subject integrating both theory and engineering practices. The study enables students to develop their spirit of exploration and innovation, and abilities in design with creativity.

(4) Design nature Machine design is an iterative process. Because of the many affecting factors and the complex calculations, the design cannot be solved directly. Thus it
