序

恶性肿瘤已经成为我国重大的公共卫生问题,全面、准确和及时掌握人群恶性肿瘤发病与死亡及其相关因素信息是肿瘤预防和控制的基础工作。为加速推广我国肿瘤登记工作,2002年卫生部责成由中国医学科学院肿瘤研究所肿瘤医院和全国肿瘤防治研究办公室建立“全国肿瘤登记中心”,负责全国肿瘤登记资料的收集、审核和出版,编写肿瘤登记工作指导手册,开展培训,组织研讨和加强国际交流与合作。经过多年的努力,全国肿瘤登记中心于2008年开始,采用国际通用的肿瘤登记统计方法,编撰出版了《中国肿瘤登记年报2004》。《2008中国肿瘤登记年报》采用了中英文双语的版式出版,标志着我国肿瘤登记工作已迈入常规化和制度化的进程。今年《2009中国肿瘤登记年报》如期出版,必定会为我国肿瘤预防与控制政策的制定、流行病学研究以及防治措施的实施与评价提供科学依据。

Preface

Cancer has become a major public health issue in China. It is of great significance to fully, accurately and duly command information on cancer attack, death and relevant factors in cancer prevention and control. Under the request of the Ministry of Health (MOH), the Cancer Institute & Hospital of the Chinese Academy of Medical Sciences and the National Office for Cancer Prevention and Control jointly established the National Central Cancer Registry (NCCR) in 2002 to accelerate cancer registration throughout the country. NCCR is entitled to collect, examine and publish the country's cancer registration data, edit job guide manuals for cancer registration, launch training programs, sponsor seminars, and intensify international exchange and cooperation. Since 2008, NCCR has been published *China Cancer Registration Annual Report 2004*, applying the internationally generic statistics method. The publication of the bilingual *Chinese Cancer Registry Annual Report 2008* marked that Chinese cancer registry has stepped into the routinized and institutionalized process. *Chinese Cancer Registry Annual Report 2009* is now published on schedule, and we believed that the data will provide useful information for mapping out strategies of cancer prevention and control, study of cancer epidemiology, cancer control implementation and evaluation.

鸣 谢

编委会对各肿瘤登记处的相关工作人员在本次年报出版过程中给予的大力协助,尤其在整理、补充、审核登记资料,以及建档、建库等方面所做出的贡献表示感谢!同时对评审专家为本次年报提出的宝贵意见表示感谢!

Acknowledgement

The editorial committee would like to express their gratitude to all staff of cancer registries who have made a great contribution to the report, especially on cultivating the cancer registration database. Sincere thanks go to all members of the Review Group for their valuable comments on the publication.

前 言

根据卫生部疾病预防控制局的要求，全国肿瘤登记中心建立了中国肿瘤登记年报制度，于2008年首次出版《中国肿瘤登记年报2004》。2009年，登记中心开始收集全国各登记处2006年肿瘤登记数据。截止到发表前，共收到49个肿瘤登记处上报的2006年资料。通过对上报数据质量的综合审核，有34个登记处的数据入选为本次报告的资料来源，以反映2006年我国肿瘤登记覆盖地区癌症的发病与死亡水平。

入选本次报告的资料覆盖2006年人口约5957万，包括15个城市地区（约4656万人口）和19个农村地区（约1301万人口）。年报内容共分五个部分，第一部分介绍我国肿瘤登记的发展；第二部分是数据质量评价；第三、四部分列出主要分析结果；第五部分是附录，包括合计结果和选取登记处的主要结果，以及肿瘤登记工作流程、统计方法和指标。

肿瘤登记工作是一项繁杂的系统工程，人口覆盖范围还需不断扩大，登记点质量也要逐一达标，任重道远。在各级政府的支持和大家的努力下，坚信年报会越来越好。

《2009中国肿瘤登记年报》顺利出版，凝结着全国肿瘤登记处工作人员和编写人员的辛勤劳动，在此谨表衷心的感谢！

赵 平
2010年2月

Foreword

Under the stipulation of the Disease Prevention and Control Bureau, the Ministry of Health of the People's Republic of China, the NCCR set up the cancer annual registration mechanism. For the first time, it published the *China Cancer Registration Annual Report 2004* in 2008. In 2009, NCCR started to collect data across the country for cancer registration for 2006. So far, it has collected data for 2006 from 49 cancer registries. As a result of comprehensive examination of the quality of all these materials, it selected data from 34 registries as sources of the report to reflect cancer incidence and mortality in the registration areas in 2006.

In this annual report, the data covers 59.57 million people from 15 cities (about 46.56 million) and 19 rural areas (about 13.01 million). The annual report comprises five parts. Part one is the progress of cancer registration in China. Part two is the evaluation of data quality. Part three through part four list main analysis results. Part five lists the total results and main data from selected cancer registries, followed by the operation procedures of cancer registration, the statistical method and indicators.

Cancer registration is a complex systemic project. It needs to keep expanding the population coverage and improving the performances of all registration sites. Shouldering such heavy responsibilities, we are to run the annual reports better, with full supports from governments at all levels and arduous efforts of all staff workers.

The *Chinese Cancer Registry Annual Report 2009* is smoothly published. We are indebted to all staff workers at the cancer registration offices and our editorial board.

Ping Zhao
February, 2010

1 概 述

自 20 世纪 70 年代以来,我国恶性肿瘤的发病及死亡一直呈明显上升趋势,目前已成为我国居民第二位死因,城市居民的首位死因,对我国国民经济、社会发展、人民健康、卫生服务与经济负担造成极大影响。肿瘤预防与控制已成为全球卫生战略的重点,而癌情信息是制定卫生事业发展规划、肿瘤防治策略,制定科研方向的主要依据。

1.1 中国肿瘤登记的发展

1 Introduction

Since the 1970s, cancer incidence and mortality have been significantly increasing and cancer mortality has become the second leading cause of death in Chinese population and No.1 killer for people in urban areas. It has seriously affected the national economy, social development, people's health and health services. Cancer prevention and control has become the emphasis of global health strategies. Cancer information is the main basis of making plans for health development, cancer prevention and control strategies and guiding scientific research.

1.2 肿瘤登记建设规划

1.2.1 建设目标

● 总体目标: 建立健全符合我国社会经济水平的国家一级肿瘤登记报告系统,反映我国整体癌症流行情况,以及不同地区、不同人群的肿瘤发病、死亡和生存状态及其发展趋势,提供满足我国肿瘤防治需求的基础信息。

● 阶段目标:

i)系统化建设阶段——2010 年,对全国肿瘤登记中心及现有肿瘤登记系统工作状态进行综合评价、整合现有资源、继续加强登记网点的建设,每个省(自治区、直辖市)至少建立一个城市点和一个农村点,使登记网点覆盖所有的省份,覆盖全国人口 10%。

ii)规范化管理阶段——2015 年,加强规范化建设,所有登记处工作流程制度化,登记资料质量达到全国肿瘤登记规范要求。

iii)可持续发展阶段——2020 年,在登记点的数量增加和质量提高的基础上,使登记数据具有全国代表性和区域代表性。

1.2.2 卫生部肿瘤登记项目

2009 年中央财政安排肿瘤登记专项经费对登记点调研、人员培训、癌症发病、死亡和人口信息收集、数据整理给予补助。在 2004 年登记点基础上新增 52 个登记点,肿瘤登记覆盖全国 31 个省(自治区、直辖市)的 95 个市县,人口约 1 亿 1 千万。2010 年,在 2009 年的基础上又新增登记点 54 个,总登记点数达到 149 个,覆盖人口超过全国人口的 10%。

1.2 Plan to improve cancer registration

1.2.1 Objectives

● General objectives: To establish cancer registration reporting system and make it perfect in country level suitable to China's socioeconomic status and actual situation which reflect cancer epidemic trend, the different cancer incidence, mortality and survival in different areas and different regions, and also provide enough information to meet the requirement of cancer prevention and control.

● Stage objectives:

i)Systematic construction phrase— Till 2010, every province has at least two cancer registries, one in urban area and one in rural area, covering all provinces and 10% of national population after comprehensive evaluation of NCCR and current state of the work of cancer registration system and integration of existing resources by continuously enhancing registry construction.

ii)Standardized management phrase—Till 2015, workflow in all cancer registries should be standardized and institutionalized. The data quality should meet regulatory requirements in national level.

iii)Sustainable development phrase—Till 2020, on the basis of increase of cancer registries and improvement of data quality, the cancer registration data should be representative for country and regions.

1.2.2 Cancer registration program

In 2009, the central government earmarked special funds for cancer registration in China. The program included investigation for cancer registries, training courses, data collections, data sort and analysis etc. On the basis of recent cancer registries, 52 counties or cities were selected to be new cancer registries covering all 31 provinces in China with population over 110 millions. In 2010, 54 cancer registries will be established on the basis of work in 2009, covering more than 10% of national population.

1.3 本次肿瘤登记年报数据

1.3.1 覆盖地区

49个登记处分布在19个省(区、市),其中地级以上城市21个,县和县级市28个。城市地区登记覆盖范围一般为城区,如北京市登记处覆盖范围为8个城区,上海市为9个中心城区,广州市为6个城区,武汉市覆盖范围为全部城区,哈尔滨市覆盖范围为南岗区、道里区;其它县或县级市均为覆盖全县(市)范围。(图1-1)

1.3 Data in this cancer registry annual report

1.3.1 Coverage area

The 49 cancer registration areas are distributed in 19 provinces (autonomous regions and municipalities), comprising 21 cities and 28 counties. Cancer registration in urban areas largely covers central districts but not suburbs, except for Nangang District and Daoli District covered in Harbin cancer registry. Cancer registries in rural areas cover all areas in the county. (Figure 1-1)

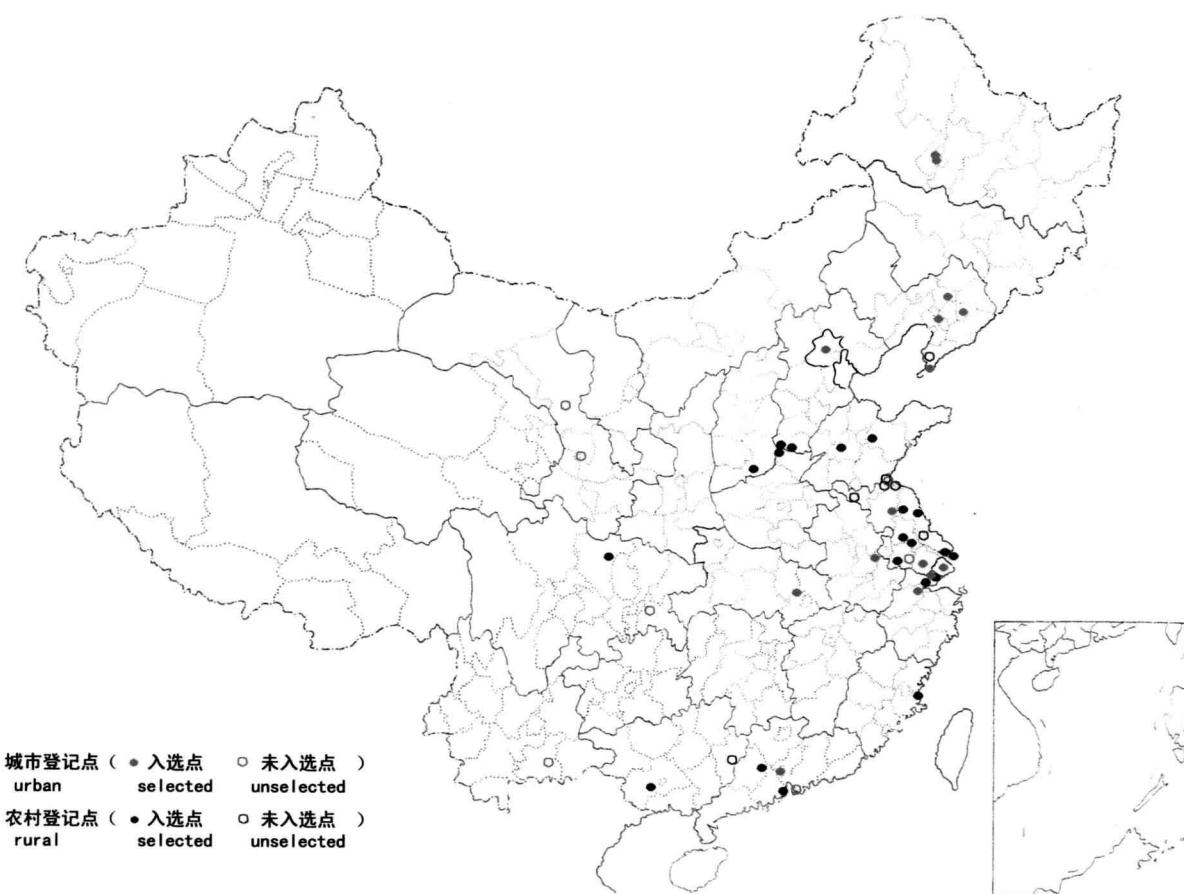

图 1-1 全国肿瘤登记地区的地理分布

Figure 1-1 Distribution of the cancer registries in China

1.3.2 时间范围

上报的发病死亡资料为 2006 年 1 月 1 日至 2006 年 12 月 31 日全年的发病和死亡数据,以及各年龄段的年中人口数据。

1.3.3 覆盖人群

全国 49 个肿瘤登记处 2006 年覆盖人口为 76 209 748 人,其中男性 38 470 829 人,女性 37 738 919 人,占全国 2006 年年末人口数的 5.80%。选择 34 个肿瘤登记处的数据进行合并,人口共 59 567 322 人,其中男性 30 013 718 人,女性 29 553 604 人,占全国 2006 年年末人口数的 4.53%。

1.3.4 登记质量

全国肿瘤登记中心根据《中国肿瘤登记工作指导手册》,并参照国际癌症研究中心(IARC)/国际癌症登记协会(IACR)《五大洲癌症发病率第 9 卷》对登记质量的有关要求,使用数据库软件 MS-FoxPro、MS-Excel 以及 IARC/IACR 的 IARC-ergTools 软件,对这些地区 2006 年的原始登记资料进行审核、整理,对资料质量的完整性和可靠性作了评估。登记中心对审核过程中发现的质量问题,及时反馈给各肿瘤登记处,并根据各登记处再次提交的核实情况,对数据进行了重新整理。本次年报最终选取 34 个登记处的数据作为合并的数据库。

1.3.5 本书内容

本书汇总了肿瘤登记覆盖地区 2006 年恶性肿瘤的发病、死亡及人口资料,包括中国人口标准化率、世界人口标准化率和累积率,各年龄段分性别的发病率和死亡率,以及死亡发病比例,病理诊断比例等数据。

1.3.2 Time scope

Cancer clinical information and personal information of patients who diagnosed or died in cancer from 1st January to 31st December 2006 were collected with registry's population data together stratified by age group and sex in mid-year.

1.3.3 Patient coverage

Total covered populations of 49 cancer registries in 2006 were 76 209 748, including 38 470 829 males and 37 738 919 females, accounted for 5.80% of whole national population in 2006. Pooled database from 34 qualified cancer registries covered 59 567 322 of populations, including 30 013 718 males and 29 553 604 females, accounted for 4.53%.

1.3.4 Registration quality

Completeness and reliability of submitted data were checked and evaluated by NCCR based on "Guideline for Chinese Cancer Registration" and referring to relevant data quality criterion of "Cancer Incidence in Five Continents Volume IX" by IARC/IACR. Software such as MS-FoxPro, MS-Excel and IARC/IACR tools IARC-ergTools were used for data collection, sorting and check and evaluation. Found quality problems were timely feedback to registries, and revised data were resubmitted. Finally, NCCR accepted the data to be pooled for national estimation from 34 cancer registries.

1.3.5 Contents

The annual report summarized and analyzed cancer new cases and deaths in registered areas in 2006, with variables such as incidence rate, mortality, China age-standardized rate (national population structure in 1982), world age-standardized rate (Segi's world standardized population), cumulative rate, age-specific rate, mortality incidence rate ratio, percentage of morphology verification etc.

2 2006年肿瘤登记资料评价

2.1 病理诊断比例,只有死亡证明书比例,死亡发病比

病理诊断比例(MV%)是评价登记资料完整性和有效性的重要指标。除无锡市、金坛市未报诊断依据编码,广西苍梧县因只报告了鼻咽癌病例,MV%比例最高,其次是阳城县、个旧市、涉县、北京市、盐亭县、杭州市、武威市、林州市、深圳市等9个登记处MV%在75%以上;有15个登记处MV%在50%以下,其中广州市为49.24%,与前几年相比有较大幅度的下降。启东市、扶绥县、海门市、大丰市等为肝癌高发区,是MV%比例低的原因之一。

只有死亡证明书比例(DCO%)也是评价登记资料完整性和有效性的重要指标。重庆市九龙坡区DCO%比例高达61.26%,其次为东海县、四会市、大连市、本溪市、广州市,DCO%在5.01%~7.97%之间。一些登记处如长乐市、淮安市楚州区、兰州市、武汉市、深圳市、涉县未报告DCO病例,其它登记处DCO%在0.05%~4.99%之间。

死亡/发病比(M/I)是评价登记资料完整性的重要指标,预后较差的癌症,M/I接近于1。若M/I大于1,提示新发病例有漏报,若M/I过低,提示发病有重卡或死亡有漏报。江苏省连云港市、铜山县、甘肃省兰州市、武威市、广东省深圳市、云南省个旧市等6个登记处因未报告或仅报告了部分的死亡病例,无法比较;江苏省海安县M/I为1.79,死亡数大于发病数。除上述7个登记处外,M/I在0.60~0.80之间的有31个登记处,武汉市、大连市、哈尔滨市道里区、灌云县、广州市M/I在0.48~0.52之间。泰兴市、临朐县、扶绥县、东海县、金坛市、肥城市M/I大于0.81。

(表2-1)

2 Indicators of data quality in 2006

2.1 Percentage of morphologically verified cases (MV%), Death certificate only cases(DCO%), Mortality/Incidence ratio (M/I)

Percentage of morphologically verified cases (MV%) is an important indicator for completeness and validity of data from cancer registries. The MV% was highest in Cangwu, Guangxi because only nasopharyngeal carcinoma cases was reported there, and followed by Yangcheng, Gejiu, Shexian, Beijing, Yanting, Hangzhou, Wuwei, Linzhou and Shenzhen where the MV% was over than 75%. Among 15 cancer registries with MV% less than 50%, Guangzhou showed the MV% of 49.24% with a decrease compared with before. MV% was lower in Qidong, Fusui, Haimen and Dafeng which are high-risk areas for liver cancer.

Percentage of death certificate only cases (DCO%) is another important indicator for completeness and validity of data from cancer registries. It was 61.26% in Jiulongpo, Chongqing followed by Donghai, Sihui, Dalian, Benxi and Guangzhou ranging between 5.01%~7.97%. However, DCO% in other cancer registries were relatively low and ranged from 0.05% to 4.99%. DCO was not reported in Changle, Chuzhou District, Huai'an, Lanzhou, Wuhan, Shenzhen and Shexian.

Mortality/ incidence ratio (M/I) is an indicator evaluating the completeness of the data from cancer registries. In general, the closer an M/I value is to 1.0 the worse is the expected outcome. It means under-reporting of incidence if M/I is greater than 1. Conversely, it means duplication of incidence or under-reporting of death if M/I is too low. M/I ratio couldn't be calculated because the death numbers were not reported or only reported partly in Lianyungang, Tongshan, Lanzhou, Wuwei, Shenzhen and Gejiu. While in Hai'an of Jiangsu, M/I ratio was as high as 1.79, indicated a higher numbers of death than the occurrence. M/I ratio ranged 0.60~0.80 in 31 cancer registries, 0.48~0.52 in Wuhan, Dalian, Daoli District, Harbin, Guanyun and Guangzhou, and more than 0.81 in Taixing, Linqu, Fusui, Donghai, Jintan and Feicheng.

(Table 2-1)
