Notebook computers are also called laptop computers. They are small enough to be put on your lap or in your briefcase. People may carry them around, but they are usually more expensive than desktop computers.

Tablet personal computers are usually shortened as tablets. They have neither mouses nor keyboards. People touch or slide on the screen with their fingers to operate tablets and use pop-up keyboard for typing. Tablets are typically larger than smartphones. They are very popular among young people.

Text B

Pre-reading questions

1. Do you know which part of a computer is the most important?
2. What do the letters of CPU stand for?

What Is a CPU?

If you want to buy a new computer, it is necessary to understand what a CPU is. The letters of CPU stand for Central Processing Unit, which is the “brain” of your computer. Without the CPU, you would not be able to play games, type research papers, or surf the Internet.

Sometimes people believe the case of a computer is the CPU. In fact, you cannot see a CPU from the outside. You have to see inside to get a good look.

The first CPUs were used in the early 1960s. They were made as part of a larger computer. Once engineers figured out how to mass produce the CPU, personal computers became less expensive for the Americans.

Since the CPU is one of the most important parts of a computer, no wonder that it is also the most expensive. If your computer is more than three years old, you may want to upgrade it to a new one. A newer, faster CPU will often enable you to be a better user.

Do You Know?

世界上第一台数字电子计算机

ENIAC常常被认为是世界上第一台数字电子计算机，它是全球首先采用电子技术实现的数字计算机，但因没有采用二进制数操作和存储程序控制，所以还不具备现代电子计算机的主要特征。ENIAC是在1946年2月由美国宾夕法尼亚大学莫尔学院研制成功的。它有18 800余只电子管，运算速度达到当时继电器式计算机的1 000倍。

冯·诺依曼计算机

根据冯·诺依曼原理设计的计算机，由控制器、运算器、存储器、输入输出设备和电源五部分组成。冯·诺依曼原理的重要思想是他在1946年提出的“存储和程序”原理。世界上第一台二进制数现代电子数字计算机EDSAC于1949年制成，它就是按照冯·诺依曼原理研制的。
