In early January, when health officials first heard about cases of unusual pneumonia in Guangdong Province, no one could have imagined what was in store for China. Each week between January and June witnessed incredible surprises—an unpredictable epidemic, many personal tragedies, nearly impossible challenges, amazing achievements and numerous acts of valor. The story of SARS in China needs to be told: there are people to be recognized, misconceptions to be clarified, and lessons to be learned. For sure, China and the rest of the world can never forget SARS.

This book, the only of its kind, tells the story faithfully and with great insight. It gives credit where credit is due: to the Chinese doctors and health officials who discovered that this disease was something never seen before; to the health care workers whose bravery and sacrifice saved many lives and prevented new infections; to journalists and newscasters, who not only reported events but helped change them as well; to the government officials who made difficult decisions with all the world watching; and to the Chinese people who suffered without losing hope but continued to fight, and eventually won. The book also acknowledges mistakes that were made—China was not prepared for SARS, but neither were other countries.

What has SARS taught us? To expect the unexpected and always be prepared, and to realize: that what began in China could have happened anywhere; that infections do not respect borders and diseases like SARS belong to the whole world; and that when countries work together, global epidemics can be stopped. China has learned that openness fosters the

trust of the people and gains the respect of the world. And China has shown that when necessary, mobilization of resources and enlisting of every citizen's help can quell raging epidemics like those in Guangdong and Beijing. The outbreak is almost over, but the work is not finished. Investing in SARS is an investment in health; investing in health is a way to contain SARS and to prepare for the next new infection that emerges.

This book has three parts. The first gives the history of the epidemic, from the first patient to where things stand now. In the second, it chronicles the work of a team of experts from the World Health Organization (WHO), their collaboration with China, and the role of WHO in the fight against SARS. The third part focuses on ten different themes, with

firsthand observations and commentary from the author, who was present for all that occurred.

This is the first book of a dedicated young journalist, who was born in Fushun City, Liaoning Province, where she grew up in humble surroundings with the support of a loving family. A graduate of Beijing University, she is the first in her family to have continued beyond high school. A reporter for Hong Kong Wenwei Newspaper, she works long, hard hours to gather information, write articles, and meet deadlines every day. During the epidemic, she also worked on this book, and had little time for sleep, let alone music, dance, and badminton—activities in which she excels.

From the time the WHO expert team began its mission in the last week of March, Zhong Xue Bing accompanied its work in Beijing, Guangdong, Shanghai
