# 说 明

本书由中国人民解放军海军司令部航海保证部委托中国科学院紫金山天文台编算。

(一)本书主要供航海天文定位及计算日月出没时刻等之用。所载数据的精度,与六分仪观测所能达到的精度相适应。

(二)本书包括天象纪要、天体位置、太阳出没、晨光昏影和月亮出没时刻、恒星视位置、北极星高度求纬度及北极星方位角等表。

(三)天象纪要载有:节气、月相、日月食、金星和木星的合、留和金星大距等。四星纪要载有:每月金、火、木、土四星可以看见的大概时间和所在的星座及每月月中的星等。中天时刻图载有:太阳以及水、金、火、木、土五星的中天时刻曲线,并可查出它们的赤经或共轭赤经的近似值。所列时刻除中天时刻图系地方平时外,均为东经 $120^{\circ}$ 标准时,即通称的北京时间。

(四)天体位置表在每两页上列出三天的数据。

每页表头印有日期、积日、星期及农历日期。

双页:刊载每小时的太阳、金星、火星、木星和土星的格林尼治时角(简称格林时角,向西计量)和赤纬,精度为 $0'.1$ 。太阳及行星的每小时时角超差( $\vartriangle$ )和赤纬差数( $\triangle$ ),每天列一值。太阳半径每三天列一值,排在太阳栏表首。

单页:载下列数据。

(1)每小时的春分点格林时角,月亮的格林时角和赤纬,以及月亮每小时的时角超差和赤纬差数。

(2)太阳出没和晨光昏影表,载有在 $0^{\circ}$ 经线上南纬 $56^{\circ}$ 至北纬 $70^{\circ}$ 地方的太阳出没、航海晨光昏影和民用晨光昏影的地方平时,精度为 $1^m$ 。太阳出没时刻每天一载,晨光始、昏影终时刻三天共用一值。□表示太阳不落,■表示太阳不出,■■表示通夜有微光。

(3)月亮出没表,载有在 $0^{\circ}$ 经线上南纬 $56^{\circ}$ 至北纬 $70^{\circ}$ 地方的月亮出没的地方平时,精度为 $1^m$ 。为了便于内插,除每天列一数据外,并列出前一天数据。□表示月亮不落,■表示月亮不出,--表示当天没有月出或月没。

(4)在单页右下侧表中还载有:太阳和行星的中天时刻,视差及行星赤经,每三天一载;时差每天一载;每天月亮上、下中天时刻,--表示当天没有上中天或下中天;月亮的半径和视差每半天(世界时 $0^h$ 、 $12^h$ )一载。

(五)恒星视位置表,载有159颗较亮恒星的星号、星名、专名、赤经、共轭赤经、赤纬、星等等项,按赤经增加的次序排列。所列赤经为一年平均值,共轭赤经和赤纬为每月月中的值。航海上常用的44颗恒星,另列一表,印成活页,以便使用。

(六)北极星高度求纬度表,包括第一、第二、第三改正值,精度均为 $0'.1$ 。

(七)北极星方位角表,纬度使用范围为北纬 $0^{\circ}$ 至 $60^{\circ}$ ,精度为 $0'.1$ 。

(八)计算常用的表及星图另编成册,作为航海天文历附表,以便常年使用。

附表中的主要篇幅是:“时角、赤纬内插表”。在表的左部从 $00^m01^s$ 至 $59^m60^s$ ,每隔一秒列一时角基本变量,其中太阳和行星共用一栏。在表的右部,列有 $\vartriangle$ 或 $\triangle$ 所对应的订正值。

## Introduction

This Almanac is compiled by Purple Mountain Observatory Academia Sinica under the superintendence of the Navigation Guarantee Department of the Chinese Navy Headquarters.

( I ) This Almanac is mainly devised for navigators to determine their positions by the method of astronomical orientation and to calculate the times of sunrise, sunset, moonrise and moonset. The accuracy of the provided data is comparable to that of sextant.

( II ) This Almanac includes the tables named, respectively, *Summary of Astronomical Phenomena*, *Planetary Information*, *Hourly Astronomical Elements of Sun, Moon and Planets*, *Sidereal Hour Angle and Declination of Stars*, *For Determining Latitude from Altitude of Polaris*, and *Azimuth of Polaris*, etc.

( III ) The table *Summary of Astronomical Phenomena* contains the information of solar terms, lunar phases, solar and lunar eclipses, conjunctions and stationaries of Venus and of Jupiter, and the greatest elongation of Venus, etc. The table *Planetary Information* contains information regarding to navigational planets, i. e., Venus, Mars, Jupiter and Saturn. The provided information includes approximate times and constellations at which these planets can be observed in each month, and their magnitudes at the middle of each month. *Local Mean Time of Meridian Passage* shows, in graphical forms, the local mean times of meridian passage of the Sun, Mercury, Venus, Mars, Jupiter and Saturn. Using this diagram, one can also approximately obtain the right ascension and sidereal hour angle of these celestial bodies. Apart from the time used in *Local Mean Time of Meridian Passage*, which is expressed in local mean time, the given times are the standard time for 120° meridian, i. e., the so called Beijing Time.

( IV ) The table *Hourly Astronomical Elements of Sun, Moon and Planets* lists data for three days on every two pages. At the top of each page are date of the Julian Calendar, day of year, day of week and date of the Chinese Calendar.

On even pages, there list, with accuracy 0'.1, Greenwich Hour Angles (abbreviated as G. H. A. s and measured westward) and declinations of the Sun, Venus, Mars, Jupiter and Saturn at each integral hour. And, the hourly exceeded differences of hour angle ( $\bar{\Delta}$ ) and the hourly differences of declination ( $\Delta$ ) of the above-mentioned celestial bodies are given for each day. Also provided is the apparent radius of the Sun, which is valid for three days.

On odd pages, the following data are tabulated.

(1) G. H. A. of the First Point of Arises ( $\gamma$ ), G. H. A. and declination of the Moon, and,  $\bar{\Delta}$  and  $\Delta$  of the Moon.

(2) The sub-table *Sunrise and Sunset* and *Nautical and Civil Twilights*. The times for these phenomena to be observed at points on 0° meridian with latitude ranging from 56°S to 70°N are given in local mean time with accuracy 1<sup>m</sup>. The times of sunrise and sunset are given for every day. The times of nautical and civil twilights, valid for three days, are given for every three days. ■, □ and ▨ indicate the Sun continuously below horizon, the Sun continuously above horizon and continuous twilight, respectively.

(3) The sub-table *Moonrise and Moonset*. The times for these two phenomena to be observed at points on 0° meridian with latitude ranging from 56°S to 70°N are given in local mean time with accuracy 1<sup>m</sup>. For the convenience of interpolation, the data for the previous day are also printed side by side. ■, □ and -- stand for the Moon continuously below horizon, the Moon continuously above horizon and both of the phenomena not occurring in the very day, respectively.

(4) The sub-table in the lower right corner. One part of this sub-table contains the times of meridian passage and parallaxes of the Sun and navigational planets, and right ascensions of the navigational planets. The above data are given for every three days. The contents of another part of the sub-table are equation of time, and the times of upper and lower meridian passages of the Moon. The above data are given for all the days having both upper and lower passages of the Moon, and, -- indicates that one of the passages does not occur in the corresponding day. The remaining part of the sub-table gives for every half day (at 0<sup>h</sup> and 12<sup>h</sup> U.T., respectively) the apparent radius and parallax of the Moon.

(V) There involved 159 brighter stars in the table *Sidereal Hour Angle and Declination of Stars*. The provided information, arranged in the sequence of increasing right ascension of the stars, includes star sequence number, star name, right ascension, Sidereal Hour Angle (S.H.A.), declination, and magnitude, etc. The listed right ascensions are the yearly mean values, and, the S.H.A.s and declinations are the values at the middle of every month. For those 44 stars frequently used in navigation, a separated table on movable pages is provided for convenient use.

(VI) The table *For Determining Latitude from Altitude of Polaris* includes the first, second and third correction values, all of which are given with accuracy 0'.1.

(VII) The table *Azimuth of Polaris* can be used in the latitude range 0° – 60°N. The accuracy of the tabulated data is 0'.1.

(VIII) Tables frequently used in calculations and star maps are separately compiled as supplementary tables and maps to the Almanac. These tables and maps can be used for long.

The main space in the supplementary booklet is occupied by the table *Interpolation Table for Hour Angle and Declination*. In the left part of this table, the values of basic variation in hour angle are listed for every second from 00<sup>m</sup>01<sup>s</sup> to 59<sup>m</sup>60<sup>s</sup>, in which the Sun and navigational planets occupy the same column. And, In the right part of the table, correction values regarding to either  $\bar{\Delta}$  or  $\Delta$  are tabulated.

## 日 月 食

(一)3月4日，月全食。这次全食，在北美洲东大部、南美洲、太平洋极东南部、南极洲小部、北冰洋、大西洋、欧洲、非洲、亚洲(除极东部)、印度洋、大洋洲极西部可以看到。食分1.237，半影食始4时16分，初亏5时30分，食既6时44分，食甚7时21分，生光7时58分，复圆9时12分，半影食终10时25分。

(二)3月19日，日偏食。这次日食，在亚洲(除西南部及东南亚地区)、北冰洋大部、北美洲极西部可以看到偏食。

(三)8月28日，月全食。这次全食，在亚洲东部、印度洋东部、大洋洲、太平洋、北美洲西大部、南美洲(除极东端)、南极洲、北冰洋小部可以看到。食分1.481，半影食始15时52分，初亏16时51分，食既17时52分，食甚18时37分，生光19时23分，复圆20时24分，半影食终21时22分。

(四)9月11日，日偏食。这次日食，在南美洲南部、南极洲部分地区、太平洋极东南部、大西洋西南部可以看到偏食。

## Eclipses

**Mar. 4, Total Eclipse of the Moon.** The eclipse is visible from the mos. eastern part of North America, South America, the extreme southeastern part of the Pacific Ocean, part of Antarctic, the Arctic Ocean, the Atlantic Ocean, Europe, Africa, Asia except the extreme east, the Indian ocean and the extreme western Oceania. The magnitude of the eclipse is 1.237. The penumbral eclipse begins at 4h16m and ends at 10h25m. The partial eclipse begins at 5h30m and ends at 9h12m. The total eclipse begins at 6h44m and ends at 7h58m. The maximum eclipse occurs at 7h21m.

**Mar. 19, Partial Eclipse of the Sun.** The eclipse is visible from Asia except the southwest and southeast, the most part of the Arctic Ocean and the extreme western part of North America.

**Aug. 28, Total Eclipse of the Moon.** The eclipse is visible from eastern Asia, the eastern Indian Ocean, Oceania, the Pacific Ocean, the most western part of North America, South America except the extreme east, Antarctic, the part of the Arctic Ocean. The magnitude of the eclipse is 1.481. The penumbral eclipse begins at 15h52m and ends at 21h22m. The partial eclipse begins at 16h51m and ends at 20h24m. The total eclipse begins at 17h52m and ends at 19h23m. The maximum eclipse occurs at 18h37m.

**Sept. 11, Partial Eclipse of the Sun.** The eclipse is visible from South America except the extreme north, the part of Antarctic, the extreme southeastern part of the Pacific Ocean and the southwestern part of the Atlantic Ocean.

三月	昏星；由宝瓶座入双鱼座。 -4.0	日出前见于东天；由人马座入摩羯座。 +1.2	日出前见于东天；在蛇夫座。 -2.1	日没后见于东天；在狮子座。 +0.1
四月	昏星；由双鱼座经白羊座入金牛座。 -4.1	日出前见于东天；由摩羯座入宝瓶座。 +1.1	半夜见于东天；在蛇夫座。 -2.4	日没后见于东天；在狮子座。 +0.3
五月	昏星；由金牛座入双子座。 -4.2	日出前见于东天；由宝瓶座入双鱼座。 +0.9	整夜可见；在蛇夫座。 -2.6	日没后见于西天；在狮子座。 +0.4
六月	昏星；由双子座入巨蟹座。 -4.3	日出前见于东天；在双鱼座。 +0.8	日没后见于东天；在蛇夫座。 -2.6	日没后见于西天；在狮子座。 +0.5
七月	晨星；由巨蟹座入狮子座。 -4.5	半夜见于东天；由双鱼座入白羊座。 +0.6	日没后见于东天；在蛇夫座。 -2.5	日没后见于西天；在狮子座。 +0.6
八月	月初昏星；在狮子座，然后接近太阳，不能观测。 月末晨星；在狮子座。 -4.1	半夜见于东天；由白羊座入金牛座。 +0.4	日没后见于东天；在蛇夫座。 -2.3	月初，日没后见于西天；在狮子座，然后接近太阳，不能观测。 +0.6
九月	晨星；由狮子座入巨蟹座。 -4.5	半夜见于东天；在金牛座。 +0.2	日没后见于西天；在蛇夫座。 -2.1	月初，接近太阳，不能观测，然后日出前见于东天；在狮子座。 +0.7
十月	晨星；由巨蟹座入狮子座。 -4.5	半夜见于东天；由金牛座入双子座。 -0.2	日没后见于西天；在蛇夫座。 -1.9	日出前见于东天；在狮子座。 +0.8
十一月	晨星；由狮子座入室女座。 -4.3	整夜可见；在双子座。 -0.1	日没后见于西天；在蛇夫座。 -1.8	日出前见于东天；在狮子座。 +0.8
十二月	晨星；由室女座入天秤座。 -4.1	整夜可见；在双子座。 -1.6	月初，日没后见于西天；在蛇夫座，然后接近太阳，不能观测。 -1.8	半夜见于东天；在狮子座。 +0.7

## PLANETARY INFORMATION, 2007

Month	Venus	Mars	Jupiter	Saturn
January	Evening star, from Sgr to Cap. Mag. : - 3.9	Visible in the eastern sky before sunrise, from Sco to Sgr. Mag. : + 1.4	Visible in the eastern sky before sunrise, in Sco. Mag. : - 1.8	Visible in the eastern sky from the midnight, in Leo Mag. : + 0.1
February	Evening star, from Cap to Aqr. - 3.9	Visible in the eastern sky before sunrise, in Sgr. + 1.3	Visible in the eastern sky before sunrise, from Sco to Oph. - 2.0	Visible throughout the night, in Leo. 0.0
March	Evening star, from Aqr to Psc. - 4.0	Visible in the eastern sky before sunrise, from Sgr to Cap. + 1.2	Visible in the eastern sky before sunrise, in Oph. - 2.1	Visible in the eastern sky after sunset, in Leo. + 0.1
April	Evening star, from Psc to Ari then to Tau. - 4.1	Visible in the eastern sky before sunrise, from Cap to Aqr. + 1.1	Visible in the eastern sky from the midnight, in Oph. - 2.4	Visible in the eastern sky after sunset, in Leo. + 0.3
May	Evening star, from Tau to Gem. - 4.2	Visible in the eastern sky before sunrise, from Aqr to Psc. + 0.9	Visible throughout the night, in Oph. - 2.6	Visible in the western sky after sunset, in Leo. + 0.4
June	Evening star, from Gem to Cnc. - 4.3	Visible in the eastern sky before sunrise, in Psc. + 0.8	Visible in the eastern sky after sunset, in Oph. - 2.6	Visible in the western sky after sunset, in Leo. + 0.5
July	Evening star, from Cnc to Leo. - 4.5	Visible in the eastern sky from the midnight, from Psc to Ari. + 0.6	Visible in the eastern sky after sunset, in Oph. - 2.5	Visible in the western sky after sunset, in Leo. + 0.6
August	Evening star at the beginning of the month, in Leo, then too close to the Sun for observation. Morning star at the end of the month, in Leo. - 4.1	Visible in the eastern sky from the midnight, from Ari to Tau. + 0.4	Visible in the eastern sky after sunset, in Oph. - 2.3	Visible in the western sky after sunset at the beginning of the month, in Leo, then too close to the Sun for observation. + 0.6
September	Morning star, from Leo to Cnc. - 4.5	Visible in the eastern sky from the midnight; in Tau. + 0.2	Visible in the western sky after sunset, in Oph. - 2.1	Too close to the Sun for observation at the beginning of the month, then visible in the eastern sky before sunrise, in Leo. + 0.7
October	Morning star, from Cnc to Leo. - 4.5	Visible in the western sky from the midnight, from Tau to Gem. - 0.2	Visible in the western sky after sunset, in Oph. - 1.9	Visible in the eastern sky before sunrise, in Leo. + 0.8
November	Morning star, from Leo to Vir. - 4.3	Visible in the western sky from the midnight, in Gem. - 0.1	Visible in the western sky after sunset, in Oph. - 1.8	Visible in the eastern sky before sunrise, in Leo. 0.8
December	Morning star, from Vir to Lib. - 4.1	Visible throughout the night, in Gem. - 1.6	Visible in the western sky after sunset at the beginning of the month, then too close to the Sun for observation. - 1.8	Visible in the eastern sky from the midnight, in Leo. + 0.7
