5. 编写细致:无论从课文的选材、注解到练习的编写,都能看出作者编写过程中的细致入微,练习尤为明显。练习的编写本着辅助理解课文为目标,充分考虑到中国学生的思维方式、对英语的理解局限性,题目充满启发性。练习内容覆盖课文的所有角落,如果练习能够回答准确,就说明学生对课文已经基本理解了。这与某些阅读教程只是粗泛地出几道回答问题就算完的做法大不相同。
6. 定位准确:鉴于以上提到的细致风格,本教材特别适用于高职高专层次的学生。

本教材结构如下:

1. 课文：为适应高职高专学生的层次，课文长度几乎都在 600～800 字之间，难度由浅入深排列；课文中出现的学生有必要掌握的常用术语均用加粗字体标出。

2. 注解：注解内容包括语言点和知识点两部分，语言点有别于传统的英语精读教学，只选择最新的语言现象、常用的新闻或时事英语来注解；所举例句内容丰富、信息量大、权威性强——均取材于英国词典或因特网。

3. 练习：练习有以下几种形式：

(1) 术语翻译：目的是让学生掌握大量的商务、时事术语。

(2) 根据课文回答问题：本题是我们精心设计的题目，针对课文的内容、语言等各方面知识要点，通过选择、填空、判断对错、翻译等多样的形式进行提问，这对学生理解课文起着重要的作用。它是本书的重头戏。

(3) 句子翻译：考察学生的信息传达能力和对课文中重要语言现象的掌握程度。

(4) 补充阅读：提供跟本文所属的大类别有关的文章，让学生进一步接触并熟悉本类别的相关知识。

Lesson One

A New Window on China's Growth

*The country's much-anticipated, more accurate **economic census** indeed reveals a nation that's economically healthier than most thought.*

By David Rocks

Business Week, DECEMBER 20, 2005

The guessing is over—sort of. China-watchers had been in a tizzy recently over news that Beijing was set to revise its economic **statistics**. On Dec. 20, the new numbers were released, showing a big jump in **gross domestic product**, though the increase was more modest than some economists had expected.

The new numbers show that GDP is \$ 1.93 trillion or 16.8% bigger than previously believed. That means China is the world's sixth-biggest national **economy**, up from No. 7 before the revision (it jumped ahead of Italy). Many economists had been expecting a 20% increase in GDP, which would have put China nearly neck-and-neck with France for the No. 5 spot. Either way, China appears set to overtake both France and Britain in 2006.

The new numbers come from a just-finished economic census. The survey, released on Dec. 20, revealed more accurately the size of the **private sector**—especially **services**. As China has moved quickly toward a **market economy** over the past two decades, the real impact of new businesses had gotten harder and harder to assess. A big problem was underreporting, to avoid taxes, among business owners.

NOT AS GRAVE. The new survey sought to improve the number-

gathering. The millions of poll-takers who participated in the initiative offered owners of restaurants, massage parlors, car-repair shops, and the like a promise of confidentiality in exchange for real data. The guarantee—which appears to have been honored—allowed Beijing to take a much more accurate snapshot of the roaring economy.

That picture revealed more than just the real size of China's economy. As it turns out, the Mainland is also in much better health economically than had been believed. Services **accounted for** 93% of the increase in GDP, so the improved data show that the services sector represents nearly 41% of China's output, up from 32% last year using the old data. And **per-capita GDP** was increased to \$1,490 from \$1,276. That's good because Beijing has long sought to boost **consumer spending** and limit reliance on **export-oriented** manufacturing.

China's banking sector also looks better. **Nonperforming loans** fell to 10.7% of GDP from 12.5%, according to **brokerage** Nomura International. While that's still a big problem, it's not quite as grave as had previously been thought. Similarly, China's ratio of **external debt** to GDP falls to about 11.8% in 2005, from 13.8% at the end of last year. "From a macro point of view, the [financial sector] is healthier than we originally assumed," Nomura economist Yasuo Sone wrote in a Dec. 20 report.

"CLEARER PICTURE." Granted, China's economic statistics remain far from perfect. There's still tremendous incentive for provincial officials and business owners to both underreport and exaggerate their numbers for various reasons. But the **statistics bureau** also says it plans to publish revised historical data, which will likely give economists a better handle on trends and improve their ability to forecast future growth.

And the survey yielded a far more comprehensive **database** of China's companies, especially in services. "Although China's statistical system still has flaws," Sone writes, the new database "should help paint a clearer picture of the economy." That's a picture analysts have been lining up to see. Chinese Economy Posts Growth of 9.9% in 2005

January 25, 2006, The Los Angeles Times

SHANGHAI—China's economy grew 9.9% in 2005, the government said Wednesday. The expansion slightly exceeded unofficial estimates.

The full-year growth matched fourth-quarter growth of 9.9% from a year earlier. The country's gross domestic product in full-year 2005 was 18.23 trillion yuan (\$2.26 trillion), the National Bureau of Statistics said in a statement.

Strong export growth and foreign investment helped to underpin that robust expansion, despite efforts by the communist leadership to curb excessive investments in construction and redundant factories that have strained transportation networks and supplies of energy and other resources.

What many economists forecast as China's "soft landing" was barely a landing at all, although it was a slight decline from the 10.1% economic
