编者的话

2001年夏,上海外语音像出版社约我讲授“现代语言学”课程,讲课分为10次进行,讲课内容由何兆熊教授和我两人合编的全国高等教育自学考试英语专业本科段指定教材《现代语言学》。上海外语音像出版社拍摄了这10次讲课的实况,并制作成10张VCD出版,以供全国各地自学考试助学单位和英语专业自考者使用。

为了便于学习者更好地使用这套光盘,提高学习效果,我在何兆熊教授的支持下,将这10次讲课内容整理成文字书稿,交付上海外语教育出版社出版。鉴于本书稿与原教程相比更为简明易懂,故将此书定名为《现代语言学简明教程》。

《现代语言学简明教程》对原书进行了全面梳理,简化了部分繁杂的章节,剔除了一些含糊的内容,删去了其中繁冗的表述,更正了若干误印之处,并按需要对某些章节作了适量增补。为了便于使用者理解和检索本书中的语言学专用术语,我们将原书的术语词表改为附有相关章节的索引词表。此外,《现代语言学简明教程》还含有两套符合“现代语言学”全国自考题型要求的模拟考卷,供学习者自测之用。

《现代语言学简明教程》的编写和出版自始至终得到了上海外语教育出版社和上海外语音像出版社的支持,值此教程出版之际,我谨向这两家出版社的总编和责任编辑致以诚挚的谢意。

Contents

CHAPTER 1 INTRODUCTION	1
1 What is linguistics?	1
1.1 Definition	1
1.2 The scope of linguistics	2
1.3 Some important distinctions in linguistics	5
2 What is language?	9
2.1 Definitions of language	9
2.2 Design features	13
Review questions	17
Suggested answers	17
CHAPTER 2 PHONOLOGY	20
1 The phonic medium of language	20
2 Phonetics	21
2.1 What is phonetics?	21
2.2 Organs of speech	22
2.3 Orthographic representation of speech sounds	23
2.4 Classification of English speech sounds	26
3 Phonology	31
3.1 Phonology and phonetics	31

3.2	Phone, phoneme, and allophone	33
3.3	Phonemic contrast, complementary distribution, and minimal pair	35
3.4	Some rules in phonology	36
3.5	Suprasegmental features — stress, tone, intonation	38
	Review questions	41
	Suggested answers	43
CHAPTER 3 MORPHOLOGY		46
1	Definition	46
2	Morpheme	47
2.1	Morpheme: the smallest meaningful unit of language	47
2.2	Types of morphemes	49
3	Compounding	54
3.1	Types of compound words	55
3.2	Features of compounds	56
	Review questions	58
	Suggested answers	59
CHAPTER 4 SYNTAX		63
1	Syntax as a system of rules	64
2	Sentence structure	65
2.1	The basic components of a sentence	65

2.2	Types of sentences	66
2.3	The linear and hierarchical structures of sentences	69
3	Syntactic categories	72
3.1	Lexical categories	73
3.2	Phrasal categories	73
4	Grammatical relations	74
5	Combinational rules	76
5.1	Phrase structure rules	77
5.2	X-bar theory	79
6	Syntactic movement and movement rules	81
6.1	NP-movement	81
6.2	WH-movement	82
6.3	AUX-movement	83
6.4	D-structure and S-structure	83
6.5	Move α — a general movement rule	84
7	Toward a theory of universal grammar	84
7.1	The General principles of Universal Grammar	85
7.2	The parameters of Universal Grammar	86
	Review questions	87
	Suggested answers	89

CHAPTER 5 SEMANTICS 94

1	What is semantics?	94
2	Some views concerning the study of meaning	94

2.1	The naming theory	95
2.2	The conceptualist view	95
2.3	The contextualist view	96
2.4	The behaviorist view	98
3	Lexical meaning	98
3.1	Sense and reference	99
3.2	Major sense relations	100
4	Sense relations between sentences	107
5	Analysis of meaning	109
5.1	Componential analysis — a way to analyze lexical meaning	109
5.2	Predication analysis — a way to analyze sentence meaning	110
	Review questions	113
	Suggested answers	115
 CHAPTER 6 PRAGMATICS		 117
1	What is pragmatics?	117
1.1	Definition	117
1.2	Pragmatics vs. Semantics	118
1.3	Context	119
1.4	Sentence meaning vs. utterance meaning	119
2	Speech act theory	121
3	Principle of conversation	127
	Review questions	130

Suggested answers	131
-------------------------	-----

CHAPTER 7 HISTORICAL LINGUISTICS 133

1 The purpose and significance of the historical study of language	133
2 The nature of language change	134
3 The historical development of English	135
3.1 Major periods in the history of English	135
3.2 Linguistic change of English	139
4 Language family	155
4.1 Classifying genetically related languages	156
4.2 The Indo-European language family	158
5 The causes of language change	159
5.1 Sound assimilation	160
5.2 Rule simplification and regularization	161
5.3 Internal borrowing	162
5.4 Elaboration	163
5.5 Sociological triggers	164
5.6 Cultural transmission	164
5.7 Children's approximation toward the adult grammar ...	165
Review questions	166
Suggested answers	168

CHAPTER 8 SOCIOLINGUISTICS 172

1 Language variation	172
----------------------------	-----

1.1	Speech community	173
1.2	Speech variety	174
1.3	Regional variation	175
1.4	Social variation	175
1.5	Stylistic variation	176
1.6	Idiolectal variation	177
2	Standard and nonstandard language	177
2.1	The nature of standard and nonstandard language	178
2.2	Lingua franca	179
2.3	Pidgin	180
2.4	Creole	181
3	Diglossia and bilingualism	181
3.1	Diglossia	182
3.2	Bilingualism	183
4	Ethnic dialect	184
5	Social dialect	186
5.1	Education varieties	186
5.2	Age varieties	187
5.3	Gender varieties	188
5.4	Sexist language	189
5.5	Register varieties	191
5.6	Address terms	194
5.7	Slang	196

5.8 Linguistic taboo	197
5.9 Euphemism	199
Review questions	201
Suggested answers	203

CHAPTER 9 PSYCHOLINGUISTICS 207

1 The biological foundations of language	207
1.1 The human brain	208
1.2 Brain lateralization	209
2 Linguistic lateralization	210
2.1 Left hemispheric dominance for language	210
2.2 Dichotic listening research	211
3 The language centers	212
3.1 Broca's area	212
3.2 Wernicke's area	213
3.3 The angular gyrus	214
3.4 Language perception, comprehension and production	214
4 The critical period for language acquisition	215
5 Language and thought	217
5.1 Early views on language and thought	217
5.2 The Sapir-Whorf hypothesis	218
5.3 Arguments against the Sapir-Whorf hypothesis	220
5.4 Understanding the relationship of language and thought	224

Review questions	228
Suggested answers	230

CHAPTER 10 LANGUAGE ACQUISITION 234

1 First language acquisition	235
1.1 The biological basis of language acquisition	235
1.2 Language acquisition as the acquisition of grammatical rules	236
1.3 The role of input and interaction	237
1.4 The role of instruction	238
1.5 The role of correction and reinforcement	239
1.6 The role of imitation	241
2 Stages of first language acquisition	242
2.1 The prelinguistic stage	243
2.2 The one-word stage	244
2.3 The two-word stage	245
2.4 The multiword stage	247
3 The development of the grammatical system	249
3.1 The development of phonology	249
3.2 The development of syntax	250
3.3 The development of morphology	251
3.4 The development of vocabulary and semantics	252
4 Second language acquisition	253
4.1 Acquisition versus learning	254
4.2 Transfer and interference	255

4.3	Error Analysis and the natural route of SLA development	257
4.4	Interlanguage and fossilization	258
4.5	The role of input	259
4.6	The role of formal instruction	260
4.7	Individual learner factors	261
	Review questions	265
	Suggested answers	267
	Model Test A	274
	Model Test A — Suggested Answers	280
	Model Test B	285
	Model Test B — Suggested Answers	292
	An English-Chinese Glossary	297

CHAPTER 1

INTRODUCTION

1 What is linguistics?

1.1 Definition

Linguistics is generally defined as the scientific study of language.

The word *language* preceded by the zero article in English implies that linguistics studies not any particular language, e. g. , English, Chinese, Arabic, and Latin, but languages in general.

The word *study* does not mean “learn” but “investigate” or “examine”.

The word *scientific* refers to the way in which language is studied.

A scientific study of language is based on the systematic investigation of data, conducted with reference to some general theory of language structure. In order to discover the nature of the underlying language system, what linguists have to do first is to study language facts, i. e. , to see how language is actually used; then they formulate some hypotheses about the language

structure. But the hypotheses thus formed have to be checked repeatedly against the observed facts. In linguistics, as in any other discipline, data and theory stand in a dialectical complementation; that is, a theory without the support of data can hardly claim validity, and data without being explained by some theory remain a muddled mass of things.

Thus the process of linguistic study can be summarized as follows: first certain linguistic facts are observed, and generalizations are made about them; next, based on these generalizations, hypotheses are formulated to account for the facts; and then the hypotheses are tested by further observations; and finally a linguistic theory is constructed about what language is and how it works.

The process of linguistic study:

- 1) linguistic facts observed;
- 2) generalizations made about the linguistic facts;
- 3) hypotheses formulated to account for the linguistic facts;
- 4) the hypotheses tested by further observations;
- 5) linguistic theories of language constructed.

1.2 The scope of linguistics

The study of language as a whole is often called **general linguistics**. This deals with the **basic concepts, theories, descriptions, models and methods** applicable in any linguistic study, in contrast to those branches of study that relate linguistics to the research of other areas.

Language is a complicated entity with multiple layers and facets, so it is hardly possible for the linguists to deal with it all at once. They have to concentrate on one aspect of it at a time.

What first drew the attention of the linguists were the sounds used in languages. The **study of sounds** used in linguistic communication led to the establishment of a branch of linguistics called **phonetics**.

Then, as linguists became interested in **how sounds are put together and used to convey meaning in communication**, they developed another branch of study related to sounds called **phonology**.

While sounds are primary in linguistic communication, they are represented by certain symbols, i. e. , words and even smaller components called morphemes. The study of the way in which these **symbols are arranged to form words** has constituted the branch of study called **morphology**.

The **combination of these words to form permissible sentences** in languages is governed by rules. The study of these rules constitutes a major branch of linguistic studies known as **syntax**.

But the ultimate objective of language is not just to create grammatically well-formed sentences, but to convey meaning. So the **study of meaning** was gradually developed and became known as **semantics**.

Language communication does not occur in a vacuum. It always occurs in a context, i. e. , it always occurs at a certain time and place, and between participants with particular intentions. When the study of meaning is conducted, not in isolation, but **in the context of use**, it becomes another branch of lin-

guistic study called **pragmatics**.

Some linguists are particularly concerned with the historical development of languages and the processes involved in language change. The **study of language change** over various periods of time and at various historical stages is known as **historical linguistics**.

The study of all these aspects of language forms the core of linguistics. Then, language is not an isolated phenomenon. Naturally, in the course of time the study of language has established close links with other branches of social studies, resulting in **interdisciplinary branches of linguistic study**.

Language and society are closely connected. The language a person uses often reveals his or her social background, and there exist social norms that determine the type of language to be used on a certain occasion; and language changes are often caused by social changes. The study of all these **social aspects of language and its relation with society** form the core of the branch called **sociolinguistics**.

Psycholinguistics, on the other hand, **relates the study of language to psychology**. It aims to answer such questions as how the human mind works when we use language, how we as infants acquire our mother tongue, how we memorize, and how we process the information we receive in the course of communication.

Findings in linguistic studies can often be applied to the research of how children acquire their native language and adults acquire their second language. The **study of language acquisition** is generally known as **applied linguistics**. In particular, **applied linguistics**
