## Lesson 1

# Everything Happens for the Best

### Guidance

*Whenever you face disappointment, or meet with difficulty, what do your parents do to you? Here is the story about Ronald Wilson Reagan, the 40th President of the USA, which can be of great benefit to you.* 每当你遇到挫折或者困惑时，你的父母会如何处置？下面这则故事讲的是美国第 40 任总统罗纳德·威尔逊·里根的经历，它定会给你很大的启示。

1 “Everything happens for the best,” my mother said whenever I faced disappointment. “If you carry on, one day something good will happen. And you’ll realize that it wouldn’t have happened if not for that **previous** disappointment.”

2 Mother was right, as I discovered after graduating from college in 1932, I had decided to try for a job in radio, then work my way up to a sports announcer. ① I **hitchhiked** to Chicago and knocked on the door of every station—and got turned down every time.

3 In one studio, a kind lady told me that big stations couldn’t risk hiring an **inexperienced** person. “Go out **in the sticks** and find a small station that’ll give you a chance,” she said.

4 I **thumbed** home to Dixon, Illinois. While there were no radio-announcing jobs in Dixon, my father said Montgomery Ward had opened a store and wanted a local athlete to manage its sports department. Since Dixon was where I had played high school football, I applied. ② The job sounded just right for me. But I wasn’t hired.

5 My disappointment must have shown. ③ “Everything happens for the best.” Mom reminded me. Dad offered me the car to hunt a job. I tried WOC Radio in Davenport, Iowa. The program director, a wonderful Scotsman named Peter MacArthur told me they had already hired an announcer.

6 As I left his office, my **frustration** boiled over. I asked aloud, “How can a fellow get to be a sports announcer if he can’t get a job in a radio station?”

7 I was waiting for the elevator when I heard MacArthur calling, “What was that you said about sports? Do you know anything about football?” Then he stood me before a **microphone** and asked me to broadcast an **imaginary** game. ④ The **preceding** autumn, my team had won a game in the last 20 seconds with a 65-yard run. I did a 15-minute build-up to that play, and Peter told me I would be broadcasting Saturday’s game!

8 On my way home, as I have many times since, I thought of my mother’s words: “If you carry on, one day something good will happen. Something wouldn’t have happened if not for that previous disappointment.” I often wonder what direction my life might have taken if I’d gotten the job at Montgomery Ward. ⑤

# Driverless Cars

### Guidance

*When will fully driverless cars arrive on the roads? We are looking forward to their presence in our life.* 无人驾驶汽车何时上路? 我们正在期盼它们的出现。

- 1 It is becoming a car industry game to predict when fully driverless cars will arrive on the roads.
- 2 Audi chairman Rupert Stadler, whose company just topped a record of 149mph with a fully self-driving RS7 **sportback**, says drivers will be able to take their hands off the wheel by 2016. A year later, Volvo will put 100 self-driving cars on the streets of Gothenburg, Sweden, with the aim of getting a fully **autonomous** vehicle on the market by 2020.
- 3 Research group Gartner says that, by 2030, autonomous-enabled vehicles will make up about 25 percent of passenger cars in mature markets. Consultancy Roland Berger says “wide **adoption**” could follow soon after, creating a market worth \$60bn for car makers, parts suppliers and tech companies.
- 4 But Stefano Aversa, co-president at the Alix Partners consultancy, says completely autonomous vehicles will never happen. “You cannot think of

something that is fully autonomous in any situation—you would never be able to cover varieties of possibilities,” he says. “You have a pedestrian coming from your left, a bicycle on your right, a kid, a cat... or simply a speed bump or a hole in the ground.”

5 Self-driving cars have been considered as the answer to problems from boring roads and **congestion** to traffic accidents—more than 90 percent of which are caused by human error. Numerous companies and cities have conducted **trials**. Google has completed almost 1m miles of testing on public roads in the US and four cities in the UK will host projects early in 2015.

6 But technical and legal experts are increasingly concerned that the excitement surrounding the technology is obscuring the significant **obstacles** that lie in the way of the introduction of autonomous vehicles. ①

7 For a start, driverless vehicles are only allowed on the road in four US states. They are also outlawed in Europe.

8 But road traffic laws still require the driver to be able to take control of the vehicle and ignore autonomous **functions**.

9 One way of keeping the driver alert even in autonomous mode is to use eye and head-tracking smart **sensors** in the cabin, something being worked on by General Motors. ②

10 But this and other parts of autonomous vehicles raise questions about data protection. **Dashboard cameras**, for instance, are banned in Germany, where the sharing of footage is seen as a **violation** of other road users’ privacy.

11 Would drivers own the data produced by the vehicles, or would **manufacturers**? Could data collected by onboard “black boxes” be sold to **insurers**? “Who will be permitted to take the data out of the black box?” asks Mr Appt.

12 Technical experts also think mainstream manufacturers are further off developing the systems that would **facilitate** a fully autonomous car than the media would suggest. ③ Numerous so-called advanced driver assistance systems have already been combined in cars, such as automatic braking and adaptive cruise control—which adjusts speed according to the car in front.

13 But the leap to being completely autonomous is a step beyond. Some industry insiders say the carmakers, though investing large amounts of capital, will have to buy in the technology or form **joint ventures** if they wish to achieve their hopes for driverless cars. ④

14 The quality of the technology is of vital importance, because cars, as advanced computers, could meet with hackers.

15 Hugh Boyes, cyber **security** expert at the UK’s Institution of Engineering and Technology, says: “If we have a hacker community starting to target vehicles, you can imagine a fair amount

of trouble. You just have to look at what happens in London when one vehicle breaks down on a main road of the city.

## Notes

- ① But technical and legal experts are increasingly concerned that the excitement surrounding the technology is obscuring the significant obstacles that lie in the way of the introduction of autonomous vehicles. 然而, 技术和法律专家日益担心, 围绕该项技术产生的兴奋, 掩盖了引入自动驾驶汽车过程中的重大障碍。
