## 宝天曼简介

## Brief introduction to Bao Tianman

为了推动宝天曼自然保护区的对外开放和发挥其应有的社会职能，宝天曼已开发了“原始森林探幽游”、“化石尖奇山险峰游”、“曼顶河水瀑布游”、“七星潭景区游”、“天心洞溶洞游”等旅游线路。

Henan Bao Tianman National Nature Reserve is situated in the northern mountain area of Neixiang county, on the south slope of Funiu Mountain in West Henan. Its total area is 3,000 hectares. The length from north to south is 28.5 kilometres and 26.5 kilometres from east to west. The geographic coordinate of the Reserve is from east longitude  $111^{\circ}47'$  to  $112^{\circ}04'$ , north latitude  $33^{\circ}20'$  to  $33^{\circ}36'$ . It's near to Ningxi Railway and National Road 312.

It is the first Natural Reserve established in Henan province under the approval of People's Government of Henan Province in April, 1980. It became the National Nature Reserve under the approval of State Council in May, 1988. In July, 1993, the National Committee of China's People and Biosphere accepted Bao Tianman into the network of China's Biosphere Reserves. In september, 2001, the UNESCO proved Bao Tianman into the network of World Biosphere Reserves. Till then, it became the first World Biosphere Reserve in Henan Province.

Henan Bao Tianman National Nature Reserve is located in the transitional region between the north subtropical zone and the south warm temperate zone. The types of its protection are the transitional forest ecosystem and precious, rare wild animals and plants. There are tens and thousands of rare animals and plants in the forest of the Reserve. The natural forest still remains the primitive outlook of the transitional mountain ecosystem. According to the discoveries of the scientific research, there are 256 families, 1054 genuses, 2911 species of senior plants, namely 80 percent of the total plants in Henan province. Among them, there are 29 National Protected plants which account 88 percent of importantly protected plants in Henan province. There are 201 terrestrial animals with spine, among which the birds are 116 species. In the Reserve, the butterflies are 162 species, dragonflies are 58 species and spiders 108 species. Many of them are rare and endemic types. It is called as "the Treasure Hall of Natural Species" and "the Green Pearl of Central China".

• In order to promote the opening of the Bao Tianman Nature Reserve and give full play to its social function, now several travel lines have been developed, such as the travel line to Bao Tianman's primitive forest, to the steep peaks of Huashijian, to the Qixingtian scenic area, to Tianxin Cave, to WuLongtan Waterfalls and the travel to the top waterfalls of Bao Tianman.
