In recen	nt years television has become the most nonli	lar form of entertainment. It

does not look as if it will be popular in the world of the future. In	n
fact it looks as if television will become more popular than ever. New systems of tele	; -

Laser beams have also made very thin television sets These set	s

5. 我国的社会主义现代化是一项我们必须努力完成的任务。

The United Kingdom is a monarchical (君主政体的) State. It is one of the independent members of the Commonwealth (the Queen is recognized as head of the Commonwealth), and a member of the European Community.

The origins and traditions of the United Kingdom are to be found in each of the four parts that make up the country: England, Wales, Scotland and Northern Ireland. England was united as a kingdom a thousand years ago, and Wales became part of the kingdom during the middle ages. The thrones (五位) of England and Scotland were united in 1603, and in 1707 legislation passed in the two countries provided for the establishment of a single Parliament of Great Britain with supreme authority both in England and Wales and in Scotland. Ireland had had links with the kingdom of England since the thirteenth century, and in 1800 the creation of the United Kingdom was completed by a union joining the Irish Parliament to that of Great Britain. In 1922 Southern Ireland (now the Irish Republic) became a self-governing country. The six counties of Northern Ireland had in 1920 been given their own subordinate Parliament, and voted to remain within the United Kingdom.

The United Kingdom Parliament at Westminster in London — with an elected chamber comprising members from English, Scottish, Welsh and Northern Ireland constituencies (选举区) — therefore represents people sharing very varied backgrounds and traditions. It has ultimate authority for government and law-making, but administrative arrangements have developed in such a way as to take account of the particular needs of different areas.

England and Wales on the one hand and Scotland on the other have different systems of law, different court systems, different education systems, different systems of local government and, for most domestic matters, different government departments.

As more people live closer together, and as they use machines to produce leisure, they find that their leisure, and even their working hours, become spoilt by a by-product of their machines —— namely, noise. Noise is nowadays in the news; it has acquired political status, and public opinion is demanding, more and more insistently, that something must be done about it.

To control noise is to demand much self-discipline (annoyance arises often from

lack of common courtesy), a sense of proportion (there is usually a conflict of interest if a noise is to be stopped), the expenditure of money (and it is far more economical to do this early rather than late), and, finally, technical knowledge.

Technical difficulties often arise from the subjective-objective nature of the problem. You can define the excessive speed of a motor-car in terms of a pointer reading on a speedometer. But can you define excessive noise in the same way? You find that with any existing simple ''noise-meter'', vehicles which are judged to be equally noisy may show considerable difference on the meter.

Though the ideal cure for noise is to stop it at its source, this may in many cases be impossible. The next remedy is to absorb it on its way to the ear.

Domestic noises may perhaps be controlled by forethought and courtesy, and industrial noises by good planning and technical improvement. But if we are going to allow fast motor-cycles and heavy diesel lorries to pass continuously through residential and business districts, the community must decide on the control it needs to exercise, for in the long run it has got to pay for it. And if a nation is to take part in modern air transport, it must enter into international agreements on the noise control measures it will impose at its airports — and here the cost of any real control is to be measured in millions of dollars.

About 350 years ago Galileo made a telescope and looked through it at the sun. What he saw both surprised and frightened him, for he saw dark spots on the sun which at once suggested to him that God had not made the world quite as perfect as he had previously believed. He hesitated to make his discovery known. Meanwhile other scientists noticed the same lack of solar perfection and proclaimed (宣布) the fact.

But Galileo continued his observations and was soon rewarded with another discovery. Fixing his attention on a single sunspot (太阳黑子) group, he noticed that in a few days it had moved in position, just as if the sun itself were turning. Afterwards he found a sunspot group which lived long enough to disappear from view on the western limb (边缘) of the sun, to re-appear on its eastern limb, and finally to regain its old position. This led him to conclude that the sun itself was rotating and that the time it took to make one complete turn was about twenty-five to twenty-seven days. Actually we know from the drawings which Galileo made of sunspots that there must

have been quite a lot of them at the time of his observations in the years 1611 and 1612. If he had gone on making his drawings in the years that immediately followed, we know that he would almost certainly have noticed that sunspots were becoming fewer and smaller. But he became interested in other things and so he failed to recognize that there is a kind of long-term cycle in sunspot activity, the sunspots increasing and decreasing as the years go on. Later this discovery of the sunspot activity was made by one of the most patient observers in the history of science, a German chemist, Charles Schwabe.

Ⅵ. 短文(1)

联合王国是一个君主政体的国家。它是英联邦内独立的国家之一(女王被承认是英联邦 的首脑), 也是欧洲共同体的成员国。

联合王国的起源和传统可从组成它的四个部分——英格兰、威尔士、苏格兰 和 北 爱 尔 兰——的各个部分找到。英格兰在一千年前统一为一个王国, 威尔士则于中世纪时成为这王 国的一个组成部分。1603年,英格兰与苏格兰的王位合而为一;1707年两国通过立法,规 定设立一个单一的、在英格兰和威尔士以及在苏格兰均享有最高权力的大不列颠国会。爱尔 兰与英格兰王国自十三世纪起已有联系, 1800 年由于爱尔兰国会并入大不列颠国会, 联合王 国的创建便告完成。1922年, 南爱尔兰(现在的爱尔兰共和国) 成为一个自主的国家。北爱尔 兰的六个郡巳于 1920 年被授权成立自巳的、在联合王国国会之下的议会,并投票表决 留 在 联合王国内。
