FACADES ADJACENT TO NATIONAL HIGHWAYS Unlike main thoroughfares in cities, the landscape around national highways does not feature elements useful to our daily lives, as their interactions mainly occur with a focus on local residents and motorists who use the national highways. It is therefore natural that the vicinity of national highways is comprised of natural landscape, civil structures, and commercial buildings related to the needs of motorists, such as gas stations, motels and restaurants serving local specialties. However, this phenomenon has depersonalized the facades around national highways and has made the boundaries of such regions more ambiguous. After all, the vicinities of highways require architectural gestures for interesting communication with motorists.

42ND ROUTE HOUSE The residence in Jeongseon is a house adjacent to a national highway. It is a building without any commercial interest, facing the highway. Naturally, it is not competing with motels and local food restaurants. What use would a house located on a national highway and whose commercial persuasion is excluded have for the client? and what interactions would it have with motorists using the national highway, and would they be necessary?

FACADE We do not expect that the house will have a great impact on the overall facade of the 42nd Route. Rather, it will act as an occasion where interactions generated when two unfamiliar elements of meet on the road will maintain each other's homeostasis, like antagonism. The facade of the Route house consists of the external facade adjacent to the road and the natural

conditions and the internal facade, with the inner court serving as the central space. Surfaces designed to react to different conditions and interesting programs will adapt to various needs and situations.

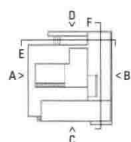

ROOF & HILL Along with the inner court, elements that constitute the external space of the house include a lawn-covered roof and a hill. The design of the hill is a concept that cuts part of the nature and transplants it to the flat land, and is aimed at making the scenic natural landscape flow into the interior of the house. The landscape that begins with the ground continues up to the balcony on the third floor, which will be used for viewing sights and for various relaxation activities.

BUDDUMAK(KITCHEN FURNACE) AND SARANGBANG(DRAWING ROOM)

The most peculiar aspect of this house equipped with various modern devices is the traditional kitchen and the Sarangbang(traditional drawing room) adjacent to the inner court. The heating for the Sarangbang is provided by burning wood in the Buddumak(kitchen furnace). The kitchen, decorated with bricks, has been designed to take into consideration the more traditional ways of living of the client's parents, who are accustomed to traditional housing, and is internally separated from the main building. The client would probably have wanted to provide his parents with the warmth of the ondol(under-floor heating) rather than the conveniences of a new house. Text by Kwak Hee-soo
