Heftmann, Erich.

Chromatography: a laboratory handbook of
chromatographic and electrophoretic methods.

Includes bibliographical references and index.

1. Chromatographic analysis. I. Title.

[DNLM: 1. Chromatography. QD271 H461c]

QD79.C4H43 1975 544'.92'08 75-5804

Contributors

H. Augustin, Institut für Analytische Chemie und Radiochemie der Universität des Saarlandes, Saarbrücken, Germany. **E. Blasius**, Director, Institut für Analytische Chemie und Radiochemie der Universität des Saarlandes, Saarbrücken, Germany. **John E. Brewer**, Head of Scientific Information and Technical Service, Pharmacia Fine Chemicals AB, Uppsala, Sweden. **Shirley C. Churma**, Research Associate, Council for Scientific and Industrial Research, Carbohydrate Research Unit, Department of Organic Chemistry, University of Cape Town, Rondebosch, South Africa. **Waldo E. Cohn**, Biology Division, Oak Ridge National Laboratory, Oak Ridge, Tennessee. **Carmine J. Coscia**, Professor, Department of Biochemistry, St. Louis University School of Medicine, St. Louis, Missouri. **M. S. J. Dallas**, Unilever Research, Colworth/Welwyn Laboratory, Welwyn, England. **D. H. Desty**, Senior Chemist, British Petroleum Company Ltd., Petroleum Division, BP Research Centre, Sunbury-on-Thames, Middlesex, England. **Helmuth Determann**, Director of Research, Boehringer Mannheim GmbH, Tutzing, Germany. **Hugo Fasold**, Professor, Institut für Biochemie der Universität, Frankfurt/Main, Germany. **J. Calvin Giddings**, Professor, Department of Chemistry, University of Utah, Salt Lake City, Utah. **A. Goldup**, Project Leader, British Petroleum Company Ltd., Petroleum Division, BP Research Centre, Sunbury-on-Thames, Middlesex, England. **Alexander Haller**, State Institute for Drug Control, Prague, Czechoslovakia. **Jeffrey B. Harborne**, Head, Phytochemical Unit, Department of Botany, University of Reading, Reading, England. **H. Hausler**, Institut für Analytische Chemie und Radiochemie der Universität des Saarlandes, Saarbrücken, Germany. **Erich Heftmann**, Western Regional Research Center, Agricultural Research Service, U.S. Department of Agriculture, Berkeley, California. **Jaroslav Janák**, Head, Institute of Analytical Chemistry, Czechoslovak Academy of Sciences, Brno, Czechoslovakia. **K.-P. Janzen**,

Institut für Analytische Chemie und Radiochemie der Universität des Saarlandes, Saarbrücken, Germany. **Roy A. Keller**, Chairman, Department of Chemistry, State University of New York, Fredonia, New York. **Karel Macek**, Third Medical Department, Charles University, Prague, Czechoslovakia. **Harold M. McNair**, Professor, Department of Chemistry, Virginia Polytechnic Institute, Blacksburg, Virginia. **Helmut K. Mangold**, Exec. Director and Professor, Bundesanstalt für Fettforschung, Münster (Westf.), Germany. **Heribert Michl**, Chairman, Institut für Chemie, Hochschule für Bodenkultur, Vienna, Austria. **Lindsay J. Morris**, Division Manager, Unilever Research, Colworth/Welwyn Laboratory, Welwyn, England. **Bryan W. Nichols**, Unilever Research, Colworth/Welwyn Laboratory, Welwyn, England. **A. Niederwieser**, Department of Chemistry, Universitäts-Kinderklinik, Zürich, Switzerland. **Dennis L. Saunders**, Research Chemist, Union Research Center, Union Oil Company, Brea, California. **Joseph Sherma**, Professor, Department of Chemistry, Lafayette College, Easton, Pennsylvania. **Lloyd R. Snyder**, Director, Research Department, Technicon Instruments Corporation, Tarrytown, New York. **Egon Stahl**, Professor, Universität des Saarlandes, Saarbrücken (Saar), Germany. **Harold H. Strain**, Consultant, Argonne National Laboratory, Argonne, Illinois. **Walter A. Svec**, Assistant Chemist, Argonne National Laboratory, Argonne, Illinois. **M. Vondráček**, Antibiotics Research Institute, Roztoky near Prague, Czechoslovakia. **H. Wagner**, Institut für Analytische Chemie und Radiochemie der Universität des Saarlandes, Saarbrücken, Germany. **Harold F. Walton**, Chairman, Department of Chemistry, University of Colorado, Boulder, Colorado. **R. J. Wieme**, Chairman, Department of Clinical Chemistry, University of Ghent, Ghent, Belgium. **Gunter Zweig**, Office of Pesticide Programs, Criteria and Evaluation Division, U.S. Environmental Protection Agency, Washington, D.C.

Contents

Foreword to the Third Edition	vii
Foreword to the Second Edition	ix
Foreword to the First Edition	xi
Preface to the Third Edition	xiii
List of Abbreviations	xv

PART ONE FUNDAMENTALS OF CHROMATOGRAPHY

1 History of Chromatography Erich Heftmann	1
1. Introduction	1
2. Liquid-Solid Adsorption Chromatography on Columns	1
3. Adsorption Chromatography on Filter Paper and Thin Layers	7
4. Liquid-Liquid Partition Chromatography	8
5. Gas Chromatography	9
6. Electrophoresis	10
7. Ion-Exchange Chromatography and Gel Filtration	11
References	12
2 Differential Migration Methods of Analysis Harold H. Strain and Walter A. Svec	14
1. Evolution and Concepts	14
The Nature of Chromatography and Related Methods	14

2. Ramifications of Chromatography and Zone Electromigration	20
Operational Considerations	20
References	24
3 Theory of Chromatography J. Calvin Giddings	27
1. Introduction	27
2. Mechanism of Zone Migration	28
3. Zone Spreading and the Concept of Nonequilibrium	32
4. Chromatography as a Random Walk	34
5. Separation	42
References	44
4 Adsorption Lloyd R. Snyder	46
1. Introduction	46
2. General Aspects of Adsorption	47
3. The Adsorbent	49
4. The Solvent	57
5. The Sample: Relative Separation Order Versus Molecular Structure	62
Group Adsorption Energies	62
Sample Localization	64
Intramolecular Electronic Effects	66
Intramolecular Steric Effects	67
6. Temperature Effects	71
7. Efficiency of Adsorbent Columns or Layers	72
8. Gas-Solid Chromatography	74
References	75
5 Techniques of Liquid Column Chromatography D. L. Saunders	77
1. Introduction	77
2. Retention Mechanisms	78
Partition	78
Adsorption	79
Ion Exchange	79
Exclusion	80
Selection of a Mechanism	80
3. Elution Modes	82
General Elution Problem	82
Isocratic Elution	82
Gradient Elution	84
Flow Programming	84
Other Modes	84
Selection of an Elution Mode	85
4. Apparatus for Modern Liquid Column Chromatography	85
Pumps	87
Pressure Measurement	89
Injection Devices	89

Columns	89
Detectors	89
Gradient Devices	91
Auxiliary Equipment	92
5. The Stationary Phase	92
Physical Form	92
Particle Size	94
Column Packing Techniques	94
6. The Mobile Phase	95
Solvent Strength	96
Selectivity	98
Compatibility	98
Viscosity	99
Other Factors	99
7. The Determination of Separation Parameters	99
Inert Retention Time	99
Partition Ratio	100
Resolution	101
Plate Number and HETP	101
Column Permeability	103
8. Optimization of Separation Parameters	103
Resolution and Separation Parameters	103
9. Analytical Techniques	107
Qualitative Techniques	107
Quantitative Techniques	107
References	107
6 Theoretical Basis of Partition Chromatography Roy A. Keller and J. Calvin Giddings	110
1. Introduction	110
2. The Liquid-Liquid Partition Model of Chromatography	110
3. Extension and Criticism of the Partition Model	112
4. Plate Height in Gas and Liquid Chromatography	114
5. Migration Parameters: R Values	120
6. Role of the Support and of the Stationary Liquid Phase	122
7. The Significance of R_F , R_M , and R	123
8. Polarity	128
9. Mechanism of Paper and Thin-Layer Chromatography	130
10. Modern Liquid Chromatography	134
References	134
7 Techniques of Paper Chromatography Karel Macek	139
1. Introduction	139
2. Preparation of Sample	140
3. Paper	141
4. Sample Application	143

5. Solvent Systems	143
6. Tank and Development	145
Techniques with Various Flow Directions	145
Multiple Chromatography	148
Special Procedures	148
7. Detection	149
8. Identification of Substances	150
9. Quantitative Analysis	153
<i>In Situ</i> Methods	153
Methods Following Elution	154
10. Preparative Chromatography	155
11. Radioisotope Methods	156
References	159
 8 Techniques of Thin-Layer Chromatography Egon Stahl and Helmut K. Mangold	 164
1. Introduction	164
2. Basic Equipment	165
3. Coating Materials	170
4. Preparation of Plates	171
5. Solvents and Development	173
6. Visualization and Documentation	177
7. Quantitative Analysis	178
8. Preparative TLC	183
9. Combined Methods	185
References	186
 9 Instrumentation in Gas Chromatography Harold M. McNair	 189
1. Introduction	189
2. Carrier Gas	190
Selection Rules	192
3. Flow Control and Measurement	193
4. Sample Inlet	195
5. Column Temperature	200
6. Columns	205
7. Detectors	210
Thermal Conductivity Cell	211
Flame-Ionization Detector	214
Electron-Capture Detector	218
References	226
 10 Theory of Electrophoresis R. J. Wieme	 228
1. Introduction	228
2. Physical Basis of Electrophoresis	229
The Electric Double Layer of Small Ions	229

The Electric Double Layer of Large Ions	230
Equations for Electrophoretic Movement of Small Ions	231
Equations for Electrophoretic Movement of Large Ions	232
Equation of Electroosmotic Flow	234
3. Basic Forms of Electrophoresis	235
Moving Boundary Electrophoresis in a Free Medium	235
Zone Electrophoresis in a Supporting Medium	236
Special Aspects of Electrophoresis	238
4. Variant Forms of Electrophoresis	241
Deflection Electrophoresis	243
Electrophoresis with Multiphasic Buffer Systems (Discontinuous Buffer Systems)	244
Disc Electrophoresis	247
Pore Gradient Electrophoresis	248
Isoelectric Focussing	249
5. Special Aspects	255
Temperature Effects in High-Voltage Electrophoresis	255
Measurement of Electrophoretic Mobility	257
Zone Sharpening	261
Molecular Dimensions from Electrophoresis	262
6. Separability in Electrophoresis	267
Factors Determining Electrophoretic Dispersion	267
Figures of Merit for an Electrophoretic Procedure	273
References	276
 11 Techniques of Electrophoresis Heribert Michl	 282
1. Analytical Methods	282
Electrophoresis on Paper and Similar Carriers	282
Electrophoresis in Gels	295
Immunoelectrophoresis	302
2. Preparative Methods	303
Discontinuous Procedures	303
Continuous Electrophoresis	305
References	307
 12 Principles of Ion Exchange Harold F. Walton	 312
1. Introduction	312
2. Types of Exchangers	313
Resins	313
Exchangers from Cellulose and Dextran	317
Inorganic Ion Exchangers	317
Special Resins	320
3. Equilibrium and Selectivity	322
Theories of Selectivity	325
4. Ion-Exchange Kinetics	327

5. Complex Ions and Selectivity	328
Anion Exchange of Metal Complexes	328
Solvent Effects	330
Ligand-Exchange Chromatography	330
6. Ion-Exchange Columns	331
The Concentration-Pulse	332
Characteristics of the Gauss Error Curve	334
Band Spreading. The Theoretical Plate	334
Practical Operation	341
References	341
13 Techniques and Applications of Ion-Exchange Chromatography	
Harold F. Walton	344
1. Introduction	344
2. Gravity-Flow Columns	345
3. Forced-Flow Systems with Continuous Monitoring	347
Analysis of Effluents	348
4. Typical Analytical Applications: Inorganic	350
Determination of Total Electrolyte Concentration	350
Separation of Interfering Ions	351
Concentration of Traces	351
Collection on Ion-Exchange Papers and Discs	353
Separation of Several Ions	353
5. Typical Applications: Organic and Biochemical	355
Ionic Compounds	355
Ligand Exchange	357
Chromatography of Nonionic Compounds	358
Donor-Acceptor Chromatography	359
References	360
14 Gel Chromatography	
Helmut Determann and J. E. Brewer	362
1. Introduction	362
2. Basic Characteristics of Gel Chromatography	363
3. Sorbents	365
Properties of the Ideal Sorbent	365
Cross-Linked Dextran Gels	366
Polyacrylamide Gels	368
Agarose Gels	368
Polyacrylamide/Agarose Gels	369
Porous Glass	370
Other Sorbents	371
4. Characterization of Solute Behavior	371
5. Factors Influencing the Separation	376
6. Methodology	381
Column Techniques	381
Thin-Layer Techniques	384

7. Applications	385
Group Separations	385
Fractionations	386
Molecular Weight and Size Estimations	386
Molecular-Weight Distribution Analysis	387
Binding Studies	387
References	389

PART TWO APPLICATIONS OF CHROMATOGRAPHY

15 Chromatography of Amino Acids and Oligopeptides A. Niederwieser	393
1. Introduction	393
2. Ion-Exchange Chromatography of Amino Acids	393
Sample Preparation	394
Internal Standard	395
Automatic Sample Injection	395
Resins	396
Buffers	396
Detection	397
Computation	399
Physiological Programs	399
Protein Hydrolyzate Programs	402
Special Programs	402
3. Ion-Exchange Chromatography of Oligopeptides	402
Resins	410
Buffers	411
Detection	412
Dipeptides	413
Class Separation: Amino Acids, Dipeptides, Oligopeptides	415
4. Hydrophobic Adsorption of Amino Acids and Oligopeptides	416
Adsorption on Polystyrene-Divinylbenzene Resins	416
Adsorption on Dextran Gels	419
5. Chromatography and Electrophoresis on Paper and Thin Layers	421
Amino Acids	421
Amino Acid Derivatives	425
Peptides	430
DANS- and DNP-Peptides	435
6. Gas Chromatography	436
Gas Chromatography of Amino Acids	437
Gas Chromatography of Phenylthiohydantoins and Analogs	449
Gas Chromatography of Peptides	451
References	452

16 Chromatography of Proteins	Hugo Fasold	466
1. Introduction		466
2. Ion-Exchange Chromatography		468
Principles		468
Cellulose Exchangers		470
Dextran Exchangers		482
Resin Exchangers		486
3. Adsorption Chromatography		489
Principles		489
Applications		490
4. Partition Chromatography and Countercurrent Distribution		492
5. Gel Filtration		493
Principles		493
Applications		497
6. Electrophoresis in Columns		500
Solid Supports		500
Density and pH Gradient Electrophoresis		509
7. Affinity Chromatography		512
8. Discussion		515
References		516
 17 Chromatography of Lipids	 M. S. J. Dallas, L. J. Morris and B. W. Nichols	 527
1. Introduction		527
2. Preliminary Separations		528
3. Separations of Neutral Lipid Classes		529
Column Chromatography		529
Paper and Thin-Layer Chromatography		530
4. Separations of Phospholipids and Glycolipids		531
Column Chromatography		531
Thin-Layer and Paper Chromatography		531
5. Separations of Polar Hydrolysis Products from Lipids		534
6. Separation of Lipid Hydrolyzates		534
Liquid-Solid Chromatography		535
Liquid-Liquid Chromatography		537
Argentation Chromatography		540
Gas-Liquid Chromatography		543
7. Separations of Molecular Species within Classes		547
Liquid-Solid Chromatography		548
Liquid-Liquid Chromatography		548
Argentation Chromatography		549
Gas-Liquid Chromatography		552
8. Some Practical Considerations in Liquid Chromatography		553
Stability of Lipids during Chromatography		553
Reaction Chromatography		554

Detection of Lipids during Chromatography	554
Quantitative Analysis	555
Radiochemical Detection	556
Automation	557
References	558
18 Chromatography of Terpenoids Carmine J. Coscia	571
1. Introduction	571
2. Hemiprenes, Mevalonolactone, and Related Compounds	572
Thin-Layer Chromatography	572
Gas-Liquid Chromatography	572
Liquid Column Chromatography	572
3. Monoterpenes	573
Gas-Liquid Chromatography	573
Thin-Layer Chromatography	575
Liquid Column and Paper Chromatography	578
4. Sesquiterpenes	579
Gas-Liquid Chromatography	579
Adsorption Column and Thin-Layer Chromatography	579
Partition Chromatography	581
5. Diterpenes	582
Thin-Layer Chromatography	582
Gas-Liquid Chromatography	583
Liquid Column Chromatography	584
6. Triterpenes	585
Adsorption Column and Thin-Layer Chromatography	585
Paper Chromatography	587
Gas-Liquid Chromatography	587
7. Carotenoids	588
Adsorption Column and Thin-Layer Chromatography	588
Other Chromatographic Methods	589
8. Polyprenols	590
Liquid Column Chromatography	590
Thin-Layer Chromatography	590
Gas-Liquid Chromatography	591
9. Phosphorylated Terpenes	591
Liquid Column Chromatography	591
Paper Chromatography	592
Thin-Layer Chromatography	592
10. Terpene Glycosides	593
Liquid Column Chromatography	593
Thin-Layer Chromatography	594
Other Chromatographic Methods	594
11. Vitamin E	595
Fat-Soluble Vitamins	595
Thin-Layer Chromatography	595

Gas-Liquid Chromatography	596
Liquid Column Chromatography	597
Paper Chromatography	597
12. Vitamin K	598
Thin-Layer Chromatography	598
Liquid Column Chromatography	599
Gas-Liquid Chromatography	599
13. Vitamin A	600
Liquid Column Chromatography	600
Thin-Layer and Paper Chromatography	600
Gas-Liquid Chromatography	601
References	603
19 Chromatography of Steroids Erich Heftmann	610
1. Introduction	610
2. General Procedures	611
Liquid Column Chromatography	611
Gas-Liquid Chromatography	612
Thin-Layer Chromatography	612
3. Specific Applications	613
Sterols	613
Bile Acids	619
C ₂₇ Sapogenins and Alkaloids	623
Cardiac Glycosides	623
Pregnane Derivatives	625
Corticosteroids	626
Androstane Derivatives	627
Estrogens	629
References	630
20 Chromatography of Carbohydrates and Related Compounds Shirley C. Churms	637
1. Introduction	637
2. Liquid Column Chromatography	638
Detection Systems	638
Adsorption Chromatography	639
Partition Chromatography	640
Ion-Exchange Chromatography	642
Molecular-Sieve Chromatography	643
3. Gas-Liquid Chromatography	651
General Experimental Conditions	652
Identification and Estimation of Components	653
Carbohydrate Derivatives Analyzed by GLC	653
4. Paper Chromatography and Electrophoresis	659
Paper Chromatography	659
Paper Electrophoresis	663

5. Thin-Layer Chromatography	663
General Experimental Conditions	663
Application of TLC to Carbohydrates	665
References	667
21 Chromatography of Drugs Karel Macek and Alexander Haller	675
1. Introduction	675
2. General Techniques	676
Sample Preparation	676
Paper Chromatography	676
Thin-Layer Chromatography	677
Gas Chromatography	677
Liquid Column Chromatography	678
Systematic Analysis	678
3. Synthetic Drugs	680
Psychotropic Drugs	680
Antihistaminics	686
Antipyretics, Analgesics, and Antitussives	687
Sedatives, Hypnotics, Anesthetics, and Antiepileptics	689
Chemotherapeutics	693
Other Groups of Synthetic Drugs	696
4. Alkaloids	697
Tobacco Alkaloids	697
Tropine Alkaloids	699
Opium Alkaloids	701
Ergot Alkaloids	703
Rauwolfia Alkaloids	704
Purine Alkaloids	704
Other Groups of Alkaloids	706
References	707
22 Column Chromatography of Nucleic Acids and Their Constituents	
Waldo E. Cohn	714
1. Introduction	714
2. Bases	716
3. Nucleosides	719
4. Nucleotides	723
Simple Nucleotides	723
Sugar Phosphates	726
Nucleoside Polyphosphates	729
Oligonucleotides	731
5. Nucleic Acids	735
6. Viruses	738
7. Addendum	739
References	739

23 Chromatography of Chlorophylls and Related Porphyrins	Harold H. Strain and Walter A. Svec	744
1. Nature of Porphyrin Compounds		744
2. Chlorophylls		745
3. Porphyrins and Hemins		753
References		756
24 Chromatography of Phenolic Compounds	Jeffrey B. Harborne	759
1. Introduction		759
2. Paper Chromatography		760
Solvent Systems		760
Color Reactions		761
R_F Values		763
Flavonoids		763
Anthocyanins		764
Flavonols and Flavones		765
Sources of Error		766
3. Paper Electrophoresis		767
4. Thin-Layer Chromatography		768
General Considerations		768
Sorbents and Solvents		770
Simple Phenolics		771
Flavonoids		772
Hydroxyquinones		773
5. Column Chromatography: Large-Scale Separations		774
Comparison of Methods		774
Polyamide		774
Sephadex		775
6. Gas-Liquid Chromatography		775
References		777
25 Chromatography of Pesticide Residues	Joseph Sherma and Gunter Zweig	781
1. Introduction		781
2. Gas Chromatography		782
General		782
Organochlorine and Organophosphorus Insecticides		790
Carbamate Insecticides		791
Herbicides		793
Pesticide Metabolites		794
Miscellaneous Pesticides		795
3. High-Speed Liquid Chromatography		796
General		796
Instrumentation		796
Applications		798
