目 录

CONTENTS

一、骨髓及血细胞形态学	(2)
Bone Marrow and Blood cell Morphology	
(一)非淋巴细胞白血病.....	(2)
Non-Lymphocytic Leukemia	
1. 急性粒细胞白血病未分化型(M ₁)	(2)
Acute Myelocytic Leukemia Undifferentiated	
2. 急性粒细胞白血病分化型(M _{2a})	(2)
Acute Myelocytic Leukemia Differentiated	
3. 急性粒细胞白血病分化型亚型(M _{2b})	(2)
Acute Myelocytic Leukemia Differentiated (Sub-Type)	
4. 急性多颗粒早幼粒细胞白血病(M ₃)	(2)
Acute Hypergranular Promyelocytic Leukemia	
5. M ₃ 维甲酸治疗后血细胞改变	(4)
Change of Blood Cell after Ritotic Acid Treatment	
6. 急性粒——单核细胞白血病伴嗜酸粒细胞增多(M ₄ E ₀)及细胞化学染色	(4)
Acute Myelomonocytic Leukemia with Eosinophilia and cytochemical staining	
7. 急性单核细胞白血病(未分化型)(M _{5a})	(7)
Acute Monocytic Leukemia (Undifferentiated)	
8. 急性单核细胞白血病(分化型)(M _{5b})	(8)
Acute Monocytic Leukemia (Differentiated)	
9. 急性红白血病(M ₆)	(8)
Acute Erythroleukemia	
10. 慢性红血病	(12)
Chronic Erythroblastemia	
11. 急性巨核细胞白血病(M ₇)及细胞化学染色	(12)
Acute Megakaryocytic Leukemia and Cytochemical Staining	
12. 慢性粒细胞白血病	(16)
Chronic Myelocytic Leukemia	
(二)淋巴细胞白血病.....	(16)
Lymphocytic Leukemia	
1. 急性淋巴细胞白血病(L ₁ 、L ₂ 、L ₃ 型)ALL	(16)
Acute Lymphocytic Leukemia (ALL)	
2. 慢性淋巴细胞白血病.....	(18)

Chronic Lymphocytic Leukemia	
(三)特殊类型白血病	(18)
Special Type of Leukemia	
1. 浆细胞白血病	(18)
Plasma cell leukemia	
2. 肥大细胞白血病	(18)
Mast cell Leukemia	
3. 嗜碱粒细胞白血病	(20)
Basophilic Leukemia	
4. 嗜酸性粒细胞白血病	(22)
Eosinophilic Leukemia	
5. 嗜酸粒细胞白血病(成熟型)	(22)
Eosinophilic Leukemia (Mature Type)	
6. 手镜型淋巴细胞白血病 HMLL	(24)
Hand Mirror Type Lymphocytic Leukemia (HMLL)	
7. 幼淋巴细胞白血病	(24)
Prolymphocytic Leukemia	
8. 大/多颗粒淋巴细胞白血病 HGLL	(26)
Hypergranular Lymphocytic Leukemia	
9. 毛细胞白血病 HCL	(26)
Hairy Cell Leukemia	
10. 全髓细胞白血病	(28)
Panmyelosis	
11. 急性单核细胞白血病伴嗜碱颗粒增多	(30)
Acute Monocytic Leukemia with Basophilic Granules	
12. 肿瘤样单核细胞白血病	(32)
Phymatoid Monocytic Leukemia	
13. 分类不明白血病	(32)
Unclassifiable Leukemia	
14. 组织细胞白血病	(34)
Histiocytic Leukemia	
15. 非何杰金淋巴瘤细胞白血病	(36)
Non-Hodgkin's Lymphoma-Leukemia	
(四)多发性骨髓瘤(MM)	(44)
Multiple Myeloma	
(五)恶性组织细胞增生症(MH)	(52)
Malignant Histiocytosis	
(六)巨球蛋白血症(MGW)	(54)
Walclenstrom's Macroglobulinemia	
(七)高雪氏病(成人)	(56)

Gaucher's Disease (Adult)	
(八) 勒雪氏病(未分化型) LS	(56)
Letterer-siwe Disease (Undifferentiated)	
(九) 海蓝氏组织细胞	(58)
Sea-Blue Histiocyte	
(十) 家族性中性粒细胞 Pelger-Hu�t 畸形	(58)
Neutrophilic pelger-Hu�t Anomaly	
(十一) 骨髓造血异常综合征(MDS)	(58)
Myelodysplastic Syndrome	
(十二) 何杰金氏病	(60)
Hodgkin's Disease	
(十三) 非何杰金淋巴瘤	(60)
Non-Hodgkin's Lymphoma	
(十四) 传染性单核细胞增多症	(62)
Infectious Mononucleosis	
(十五) 骨髓纤维化	(62)
Myelofibrosis	
(十六) 药物反应中性粒细胞改变	(62)
Neutrophil Changes caused by Drug	
(十七) 反应性组织细胞增生	(64)
Reactive Histiocytosis	
(十八) 破伤风血清引起白细胞改变	(64)
Reactive WBC Changes of Tetanic Antiserum	
(十九) 缓解期急性淋巴细胞白血病感染骨髓象	(64)
Reactive BM Changes of Acute Lymphocytic Leukemia (CR) with Infection	
(二十) 药物引起骨髓巨核细胞改变	(64)
Megakaryocytic Changes Caused by Drug	
(二十一) 钩虫引起巨大幼红细胞贫血	(66)
Megaloblastic Anemia Caused by Hookworm	
(二十二) 肿瘤患者血细胞的改变	(66)
Reactive Blood Cell Changes of Tumor	
(二十三) 结核病外周血细胞改变	(68)
Reactive Blood Cell Changes of Tuberculosis	
(二十四) 系统性淀粉样变	(68)
Systematic Amyloidosis	
(二十五) 骨髓坏死	(68)
Bone Marrow Necrosis	
(二十六) 原始红细胞血岛	(68)
Pronormoblastic Island	
(二十七) 浆细胞岛	(70)

Plasmocytic Island	
(二十八)大颗粒淋巴细胞	(70)
Large Granular Lymphocyte	
(二十九)胃腺癌引起巨大幼红细胞贫血	(70)
Megaloblastic Anemia Caused by Gastric Adenocarcinoma	
(三十)败血症引起急性一过性造血功能停滞	(70)
Acute Transitory Erythroid Aplasia caused by septicemia	
(三十一)药物引起骨髓造血异常综合征	(70)
MDS Caused by Drugs	
(三十二)癌的骨髓转移	(72)
Metastatic Cancer in the Bone Marrow	
1. 神经母细胞瘤	(72)
Neuroblastoma	
2. 乳腺癌	(76)
Breast Cancer	
3. 胃腺癌	(76)
Gastric Adenocareinoma	
4. 肺癌	(78)
Lung Cancer	
5. 卵巢癌	(82)
Ovary Cancer	
6. 肝癌	(82)
Liver Cancer	
7. 鳞癌	(82)
Squamous Cell Carcinoma	
8. 肾癌	(84)
Kidney Cancer	
9. 黑色素瘤	(86)
Melanoma	
10. 胰腺癌	(86)
Panereas Cancer	
11. 结肠癌	(86)
Colon Cancer	
12. 消化系统腺癌	(86)
Alimentary Adenocarcinoma	
13. 前列腺癌	(88)
Prostate cancer	
14. 泪腺癌	(90)
Lachrymal Gland Cancer	
15. 小脑髓母细胞瘤	(90)

Medulloblastoma	
16. 精原细胞癌	(90)
Seminoma	
17. 腺癌	(90)
Adenocarcinoma	
(三十二)贫血	(90)
Anemia	
1. 巨幼红细胞贫血	(90)
Megaloblastic Anemia	
2. 地中海贫血 Hb-H	(92)
Thalassemia Hb-H	
3. 遗传性椭圆形红细胞增多症	(92)
Hereditary Elliptocytosis	
4. 球形红细胞贫血	(92)
Spherocytic Anemia	
5. 缺铁性贫血	(94)
Iron Deficiency Anemia	
6. 溶血性贫血	(94)
Hemolytic Anemia	
(三十三)电镜血小板伸展功能图型 7000×	(94)
Spreading Function of Thrombocytes under Electron Microscope	
(三十四)放射线引起血小板变性	(96)
Reactive Thrombocyte' changes of Radiation	
(三十五)血小板无力症	(96)
Thrombasthenia	
二、组织印片常见细胞及病变细胞	(98)
Tissue Printing	
(一)正常组织印片	(98)
Normal Cell	
1. 心脏 Heart	(98)
2. 淋巴结 Lymph Node	(98)
3. 肾 Kidney	(100)
4. 肺 Lung	(100)
5. 胰 Pancreas	(100)
6. 脾 Spleen	(100)
7. 甲状腺 Thyroid	(102)
8. 前列腺 Prostate	(102)
9. 肝 Liver	(102)
10. 胃粘膜 Gastric Mucosa	(102)
11. 皮肤 Skin	(104)

(二)病变细胞	(104)
Pathologic Cell	
1. 胃腺癌	(104)
Gastric Adenocarcinoma	
2. 胃腺癌转移	(104)
Gastric Adenocarcinoma	
3. 胃腺癌转移	(104)
Gastric Adenocarcinoma	
4. 非何杰金淋巴瘤	(104)
Non-Hodgkin's Lymphoma	
5. 肺腺癌转移	(106)
Lung Adenocarcinoma	
6. 鼻咽部低分化鳞癌	(106)
Nasopharyngeal Squamous carcinoma-Low Differentiation	
7. 鼻咽部恶性组织细胞增生症(淋巴结转移)	(106)
Nasopharyngeal Malignant Histiocytosis	
8. 播散性组织细胞增生症x(脾、皮肤)	(106)
Disseminated Histiocytosis x (Spleen, skin)	
9. 良性吞噬性组织细胞脂膜炎	(108)
Benign Histiocytic Cytophagous panniculitis (spleen)	
10. 高雪氏病	(108)
Gaucher Disease	
11. 尼曼匹克氏病	(108)
Niemann-pick Disease	
12. 前列腺癌	(108)
prostate Adenocarcinoma	
13. 肺腺癌低分化型	(110)
Lung Adenocarcinoma-Low Differentiation	
14. 肾癌	(110)
Kidney Cancer	
三、穿刺液(针吸)细胞形态学	(110)
Puncture Fluid cell Morphology	
(一)间皮细胞	(110)
Mesothelial cell	
(二)非何杰金淋巴瘤	(112)
Non-Hodgkin's Lymphoma	
(三)何杰金淋巴瘤	(112)
Hodgkin's Lymphoma	
(四)乳腺癌	(112)
Breast Carcinoma	

(五)艾滋病	(114)
Acquired Immunodeficiency Disease (AID)	
(六)肺结核	(114)
pulmonary Tuberculosis	
(七)肺腺癌	(114)
Lung Adenocarcinoma	
(八)胃贲门腺癌(肺转移)	(116)
Cardiac Adenocarcinoma (Lung Metastasis)	
(九)胰腺癌(肺转移)	(118)
Pancreas Adenocarcinoma (Lung Metastasis)	
(十)肺鳞癌	(118)
Lung Squamous cell carcinoma	
(十一)神经母细胞瘤	(118)
Neuroblastoma	
(十二)非何杰金淋巴瘤	(118)
Non-Hodgkin's Lymphoma	
(十三)恶性组织细胞增生症	(120)
Malignant Histiocytosis	
(十四)卵巢癌	(122)
Ovary Carcinoma	
(十五)肝癌	(122)
Liver cancer	
(十六)胰腺癌(粘液型)	(122)
Pancreas Adenocarcinoma (Mucous Type)	
(十七)胃腺癌	(124)
Gastric Adenocarcinoma	
(十八)卵巢淋巴瘤	(124)
Ovary Lymphoma	
(十九)肺腺癌(心包液)	(124)
Lung Adenocarcinoma (Pericardial Fluid)	
(二十)膀胱癌(尿)	(124)
Bladder Cancer (urine)	
(二十一)巨细胞病毒细胞(尿)	(126)
Cytomegalovirus Cell (urine)	
四、脑脊液	(126)
Cerebrospinal Fluid	
(一)神经节细胞	(126)
Neuroganglion Cell	
(二)脉管膜细胞	(126)
Vascular Membrane Cell	

一、骨髓及血细胞形态学

(一) 非淋巴细胞白血病

1. 急性粒细胞白血病未分化型(M_1)

图1 原始粒细胞，胞体约18—20微米，规则多为圆形；核染色质细致，可见核仁；胞浆量少，着色深浅不一；无颗粒。

2. 急性粒细胞白血病分化型(M_{2a})

图2 原始及早幼粒细胞，胞体圆形，规则或略不规则；胞核圆形或有凹陷。早幼粒细胞染色质较原始粒细胞粗，排列较致密，部分可见核仁；浆呈蓝或紫红色，可见嗜天青颗粒。

3. 急性粒细胞白血病分化型亚型(M_{2b})

图3,4 示病理性中幼粒细胞增多。胞体较大，形态不规则，核浆发育不平衡；核畸形，染色质似早幼粒细胞阶段，可见核仁；浆丰富可见嗜天青颗粒及空泡。图4右方为二个原始粒细胞。

4. 急性多颗粒早幼粒细胞白血病(M_3)

图5 M_3 细颗粒型 细胞大小不等，胞体不规则；胞核多呈畸形，褶叠，分叶，核有染色质外溢，染色质细致，核仁明显；浆灰蓝分内外浆，颗粒细小靠内浆部分。

图6 M_3 粗颗粒型 胞体大小不等，不规则；核畸形，呈凹陷、肺叶状；浆灰蓝分内外浆，颗粒粗大弥散在内浆部分及核上；部分可以呈嗜碱性，染色质结构不清楚，胞浆可见瘤状突起，Auer's 小体呈柴薪状排列。

一、Bone Marrow and Blood Cell Morphology

(一) Non-Lymphocytic Leukemia

1, Acute Myelocytic Leukemia Undifferentiated (M_1)

Fig. 1, Myeloblasts of uniform size are characterized by regular round forms (diameter 18-20 μm). Chromatin is fine with visible nucleoli. Cytoplasm stained discordantly is scanty and contains no granules.

2, Acute Myelocytic Leukemia with Differentiation (M_{2a})

Fig. 2, Hyperplasia of round myeloblasts and promyelocytes. Nuclei are regular or irregular and displaying indented. Promyelocytic chromatin is slightly coarse and condense. Nucleoli can be seen. Cytoplasm is blue or purple-red with azurophilic granules.

3, Acute Myelocytic Leukemia with Differentiation (subtype M_{2b})

Fig. 3-4, Hyperplasia of marked abnormal myelocytes with marked asynchrony of nucleocytoplasmic maturation. Nuclei have deformity with distinct nucleoli. Cytoplasm is abundant with azurophilic granules. Fig. 4, On the right there are two myeloblasts.

4, Acute Hypergranular Promyelocytic Leukemia (M_3 Fine G)

Fig. 5, Hypergranular promyelocytes are variable in size with irregular shape. Nuclear outline is irregular displaying indented, folded or lobulated. Chromatin is fine and contains clear nucleoli. Cytoplasm is grey-blue. There are fine granules in the inner cytoplasm.

Fig. 6, M_3 (Coarse G) These cells are variable in size with indented, folded or lobulated nuclei. Cytoplasm is grey-blue, divided into inner and outer cytoplasm and filled with coarse granules. The granules can be seen at nuclei. Tumor-like protrusion of cytoplasm also can be seen. In cytoplasm Auer' s Bodies can be seen as bundles of firewood.

图 7 M_3 甲苯胺蓝染色 颗粒染呈紫红色, 提示颗粒含酸性粘多糖。瑞氏染色呈嗜碱性紫黑色颗粒。

图 8 M_3 氯醋酸酯酶染色(AS-D-CE) M_3 型细胞呈强阳性或弱阳性反应。

5. M_3 维甲酸治疗后血细胞改变

图 9 M_3 维甲酸治疗后 1 周骨髓片 粒细胞颗粒消失, 中间有 2 个晚幼红细胞, 右方是 2 个中幼红细胞, 呈巨型变, 核畸形。

图 10 M_3 维甲酸治疗后 2 周骨髓片 粒细胞颗粒消失, 核畸形, 呈肺叶状, 凹陷, 染色质细致, 可见核仁。

6. 急性粒——单核细胞白血病伴嗜酸粒细胞增多(M_4E_0)及细胞化学染色

急性粒——单核细胞白血病(M_4)伴嗜酸性粒细胞增多称 M_4E_0 , 是 M_4 的一种亚型。其主要特征为: 形态学符合 M_4 并伴有嗜酸性粒细胞增多 ≥ 0.05 (不计算有核红细胞 NEC)。嗜酸性粒细胞形似单核细胞, 大多为中、晚幼嗜酸性粒细胞, 成熟型呈低分叶状。浆中含嗜酸、嗜碱两种颗粒; PAS 染色阳性。细胞呈 16 号染色体异常。表现为臂间倒位——inv(16)($p^{13}q^{22}$); 长臂部分缺失——del(16)(q^{22}); 同源染色体易位——t(16; 16)($p^{13.1}q^{22}$)。见图 11—17。

图 11 M_4E_0 示原始粒细胞、幼稚单核细胞及 4 个嗜酸性粒细胞。

图 12 正常嗜酸性粒细胞过碘酸——雪夫氏(PAS)反应 嗜酸粒细胞颗粒呈阴性反应, 浆呈粉红色, 看似泡沫状。左方是一中性分叶核粒细胞 PAS 呈强阳性反应。

Fig. 7, M_3 Toluidine blue staining This figure shows hypergranular promyelocytes containing acid mucopolysaccharide granules, staining purple-red in color. These granules present darkpurple basophilic reaction with Wright's stain.

Fig. 8, M_3 AS-D-Chloroacetate Esterase (AS-D-CE) This figure shows strong or weak positive reaction in leukemic cells.

5, Change of Blood cell after Ritotic Acid Treatment

Fig. 9, M_3 Bone marrow smear after treatment with ritotic acid for one week Granules disappear in leukemic cells. In the center two cells are orthochromatic normoblasts. On the right two cells are polychromatic normoblasts with megaloblastoid changes and abnormal nuclei.

Fig. 10, M_3 Bone marrow smear after treatment with ritotic acid for two weeks Granules disappear and nuclei get deformity, indented or lung-lobe shaped. Chromatin is fine with distinct nucleoli.

6, Acute Myelomonocytic leukemia with Eosinophilia and Cytochemical Staining

Acute myelomonocytic leukemia (M_4) with hyperplasia of eosinophils (M_4E_0). M_4E_0 is a subtype of M_4 , having the characteristics of M_4 with hyperplasia of eosinophils ≥ 0.05 (NEC) which are mainly composed of monocyte-shaped eosinophilic myelocytes, eosinophilic metamyelocytes and lower-lobulated eosinophils. Chromosome 16 appears to have inv(16)($P^{13}q^{22}$), del(16)(q^{22}) or t(16; 16)($p^{13.1}q^{22}$). Fig. 11-17

Fig. 11, M_4E_0 The figure shows myeloblasts, promonocytes and four eosinophils.

Fig. 12, Normal eosinophilic Periodic Acid-Schiff (PAS) reaction Eosinophils are negative. On the left, one cell is polymorphonuclear neutrophil with strongly positive reaction.

图 13 M_4E_0 嗜酸性粒细胞 PAS 反应 图中示 4 个嗜酸性粒细胞 PAS 反应颗粒呈红紫色,粗大。右上粒细胞浆呈弥散性红紫色

图 14 正常嗜酸性粒细胞 AS-D-CE 染色 细胞浆中呈弥散性粉红色。左方是一中性粒细胞浆呈深红色。

图 15 M_4E_0 AS-D-CE 染色 图中心示嗜酸性粒细胞颗粒着深红棕色,粗大。

图 16 M_4E_0 甲苯胺蓝染色 图中心示嗜酸性粒细胞含酸性粘多糖颗粒,染呈深紫红色,瑞氏染色呈嗜碱性紫黑色颗粒。

图 17 M_4E_0 过氧化酶(POX)染色 图中酸性粒细胞浆中粗大圆形颗粒染呈蓝色。

7. 急性单核细胞白血病(未分化型) (M_{5a})

图 18,19, 急性单核细胞白血病未分化型(M_{5a})

原始单核细胞呈圆形或椭圆形,直径约 15—20 微米;胞核圆或稍凹陷,着色较浅,染色质呈细网状,核仁 1—3 个,清晰;胞浆丰富,灰蓝或淡蓝色。

Fig. 13, M_4E_0 Eosinophilic PAS reaction This figure shows four eosinophils with red-purple coarse granules. A granulocyte (upper right) has diffuse red-purple granules in the cytoplasm.

Fig. 14, Normal eosinophilic AS-D-CE staining This figure shows one normal eosinophil with diffusive pink cytoplasm. On the left, there is one neutrophil with deeply red-purple cytoplasm.

Fig. 15, M_4E_0 Bone marrow AS-D-CE staining At the center there is an eosinophil with deeply red brown granules.

Fig. 16, M_4E_0 Bone marrow toluidine blue staining At the center there is an eosinophil containing acid mucopolysaccharide granules, staining deeply purple-red in color. These granules present dark-purple basophilic reaction with Wright's stain.

Fig. 17, M_4E_0 Bone marrow peroxidase reaction (POX) This figure shows eosinophils with blue coarse granules in the cytoplasm.

7, Acute monocytic leukemia (Undifferentiated) (M_{5a})

Fig. 18-19, There are round or ellipsoidal monoblasts (diameter 15-20 μm). The nuclei are round or indented, and stained lighter than the other primitive cells. Chromatin is fine reticular with 1-3 prominent nucleoli.

Abundant cytoplasm is grey-blue or light blue.

图 20, 21, α -醋酸萘酯非特异性酯酶(NAE)染色 M_{5a} 白血病细胞呈深棕或淡棕色,能被氟化钠抑制。

图 22 M_{5a} 治疗后部分缓解,骨髓片中出现多量小巨核细胞。

8. 急性单核细胞白血病(分化型)(M_{5b})

图 23 原始,幼稚单核细胞;浆中可见细长Auer 氏小体及细小嗜天青颗粒。

9. 急性红白血病(M_6)

图 24 示红血病期,骨髓及外周血见多量原始及早幼红细胞,呈巨幼变。其他细胞受抑制。

Fig. 20-21, M_{5a} Bone marrow α -naphthyl acetate nonspecific esterase (NAE) reaction The leukemic cells present deeply brown reaction which can be inhibited by sodium fluoride.

Fig. 22, After treatment, M_{5a} partially remittent bone marrow has a large number of small megakaryocytes.

8, Acute monocytic leukemia (Differentiated) (M_{5b})

Fig. 23, The figure shows monoblasts and promonocytes. The cytoplasm contains thin and long Auer' s rods with fine azurophilic granules.

9, Acute Erythroleukemia

Fig. 24, Erythroleukemia (M_6) This figure shows bone marrow of erythroblastemia. A large number of megaproerythrocytes and basophilic meganormoblasts can be seen. The other cells are few.
