

CONTENTS

PART A FUNDAMENTALS OF QUANTITATIVE INORGANIC ANALYSIS

Chapter I Introduction 3

I, 1	Chemical analysis	3
I, 2	Sampling	3
I, 3	Types of analysis	3
I, 4	Use of literature	4
I, 5	Common techniques	5
I, 6	Other techniques	6
I, 7	Instrumental methods	7
I, 8	Time and money, accuracy and range	7
I, 9	Interferences	8
I, 10	Accuracy and precision	10
I, 11	Summary	10
I, 12	Selected bibliography	11

Chapter II Fundamental theoretical principles 14

II, 1	Electrolytic dissociation	14
II, 2	The law of mass action	17
II, 3	Activity and activity coefficient	18
II, 4	Acid-base equilibria in water	19
II, 5	Strengths of acids and bases	20
II, 6	Dissociation of polyprotic (polybasic) acids	22
II, 7	Common ion effect	23
II, 8	Solubility product	25
II, 9	Quantitative effects of a common ion	27
II, 10	Fractional precipitation	29
II, 11	Complex ions	30
II, 12	Effect of acids upon the solubility of a precipitate	32
II, 13	Effect of temperature upon the solubility of a precipitate	33
II, 14	Effect of the solvent upon the solubility of a precipitate	33
II, 15	The ionic product of water	33

II. 16	The hydrogen-ion exponent, pH	34
II. 17	The hydrolysis of salts	36
II. 18	Hydrolysis constant and degree of hydrolysis	38
II. 19	Buffer solutions	42
II. 20	Electrode potentials	46
II. 21	Concentration cells	49
II. 22	Calculation of the e.m.f. of a voltaic cell	49
II. 23	Oxidation-reduction cells	50
II. 24	Calculation of the standard reduction potential	52
II. 25	Equilibrium constants of oxidation-reduction reactions	53
II. 26	Selected bibliography	56

Chapter III Common apparatus and basic techniques 58

III. 1	Introduction	58
--------	--------------	----

Balances 59

III. 2	The analytical balance	59
III. 3	Essential features of the analytical balance	60
III. 4	The requirements of a good balance	60
III. 5	Weights, reference masses	61
III. 6	Two-knife single-pan balance	62
III. 7	Top loading balances	65
III. 8	Electronic balances	66
III. 9	Other types of balances	67
III. 10	Care and use of analytical balances	68
III. 11	Errors in weighing	69

Graduated glassware 71

III. 12	Units of volume	71
III. 13	Temperature standard	72
III. 14	Graduated apparatus	73
III. 15	Graduated flasks	74
III. 16	Pipettes	76
III. 17	Burettes	78
III. 18	Weight burettes	81
III. 19	Piston burettes	81
III. 20	Graduated (measuring) cylinders	82

Water for laboratory use 82

III. 21	Purified water	82
III. 22	Wash bottles	83

General apparatus 84

III. 23	Glassware, ceramics, plastic ware	84
III. 24	Metal apparatus	85
III. 25	Heating apparatus	88
III. 26	Desiccators and dry boxes	91

III, 27	Stirring apparatus	94
III, 28	Filtration apparatus	95
III, 29	Weighing bottles	97
Reagents and standard solutions		98
III, 30	Reagents	98
III, 31	Purification of substances	99
III, 32	Preparation and storage of standard solutions	100
Some basic techniques		103
III, 33	Preparation of the substance for analysis	103
III, 34	Weighing the sample	104
III, 35	Solution of the sample	104
III, 36	Precipitation	106
III, 37	Filtration	107
III, 38	Filter papers	107
III, 39	Filter pulp	109
III, 40	Gooch crucibles	109
III, 41	Crucibles with permanent porous plates	110
III, 42	Washing of precipitates	111
III, 43	Technique of filtration	112
III, 44	Drying and ignition of precipitates	112
III, 45	Perforated screens for crucibles	115
III, 46	The Schöniger oxygen flask method for elemental analysis	115
III, 47	References	116
III, 48	Selected bibliography	117

PART B ERRORS AND SAMPLING

Chapter IV	Errors and statistics	121
IV, 1	Limitations of analytical methods	121
IV, 2	Accuracy	121
IV, 3	Precision	122
IV, 4	Classification of errors	123
IV, 5	Minimisation of errors	124
IV, 6	Significant figures and computations	125
IV, 7	Mean (average) deviation. Standard deviation	127
IV, 8	Normal (Gaussian) distribution	129
IV, 9	Comparison of results	130
IV, 10	The number of parallel determinations	132
IV, 11	The value of statistics	133
IV, 12	References	133
IV, 13	Selected bibliography	134

Chapter V Sampling 135

V, 1	The basis of sampling	135
------	-----------------------	-----

V, 2	Sampling and physical state	135
V, 3	Crushing and grinding	137
V, 4	Hazards in sampling	138
V, 5	References	138
V, 6	Selected bibliography	138

PART C SEPARATIVE TECHNIQUES

Introduction	141
Chapter VI Solvent extraction	143
VI, 1 General discussion	143
VI, 2 Factors favouring solvent extraction	145
VI, 3 Quantitative treatment of solvent extraction equilibria	146
VI, 4 Ion-association complexes	148
VI, 5 Extraction reagents	149
VI, 6 Some practical considerations	151
Some applications	153
VI, 7 Determination of beryllium as the acetylacetonate complex	153
VI, 8 Determination of boron using ferroin	154
VI, 9 Determination of copper as the diethyldithiocarbamate complex	155
VI, 10 Determination of copper as the 'neo-cuproin' complex	156
VI, 11 Determination of iron by chloride extraction	157
VI, 12 Determination of iron as the 8-hydroxyquinolate	158
VI, 13 Determination of lead by the dithizone method	158
VI, 14 Determination of molybdenum by the thiocyanate method	160
VI, 15 Determination of nickel as the dimethylglyoxime complex	161
VI, 16 Determination of silver by extraction as its ion-association complex with 1,10-phenanthroline and bromopyrogallol red	162
VI, 17 Determination of uranium as the 8-hydroxyquinolate	163
VI, 18 References	163
VI, 19 Selected bibliography	163
Chapter VII Ion exchange	165
VII, 1 General discussion	165
VII, 2 Action of ion exchange resins	167
VII, 3 Ion exchange chromatography	172
VII, 4 Ion exchange in organic and aqueous-organic solvents	175
VII, 5 Chelating ion exchange resins	175
VII, 6 Liquid ion exchangers	177
Applications in analytical chemistry	178
VII, 7 Experimental techniques	178
VII, 8 Determination of the capacity of an ion exchange resin (column method)	180

VII, 9	Separation of zinc and magnesium on an anion exchanger	181
VII, 10	Separation of chloride and bromide on an anion exchanger	182
VII, 11	Determination of the total cation concentration in water	183
VII, 12	Separation of cobalt and nickel on an anion exchanger	183
VII, 13	Separation of cadmium and zinc on an anion exchanger	185
VII, 14	Determination of fluoride with the aid of a cation exchanger	186
VII, 15	Determination of sulphur in iron pyrites with the aid of a cation exchanger	187
VII, 16	Separation of cobalt and uranium from mixed aqueous-organic solvent using a cation exchange resin	188
VII, 17	Determination of uranium with the aid of a liquid anion exchanger	189
VII, 18	Concentration of copper(II) ions from a brine solution using a chelating ion exchange resin	190
VII, 19	References	191
VII, 20	Selected bibliography	191

Chapter VIII Paper, thin layer and column chromatography

		193
VIII, 1	General introduction	193
VIII, 2	Thin Layer Chromatography	196
VIII, 3	High Performance Liquid Chromatography	198
VIII, 4	Separation of nickel, manganese, cobalt and zinc and determination of R_F values	199
VIII, 5	Separation of nickel, copper, cobalt, and zinc	200
VIII, 6	Semi-quantitative separation of copper, cobalt, and nickel on slotted paper strips	201
VIII, 7	Separation of iron and aluminium on a cellulose column	202
VIII, 8	Separation of cobalt and nickel on a cellulose column	205
VIII, 9	Separation of copper and nickel on a cellulose column	206
VIII, 10	References	207
VIII, 11	Selected bibliography	207

Chapter IX Gas chromatography

		209
IX, 1	Introduction	209
IX, 2	Apparatus	209
IX, 3	Programmed-temperature gas chromatography	214
IX, 4	Quantitative analysis by GLC	214
IX, 5	Gas chromatography of metal chelates	216
IX, 6	Determination of aluminium by gas chromatographic analysis of its tris(acetylacetonato) complex	218
IX, 7	References	219
IX, 8	Selected bibliography	219

PART D TITRIMETRY AND GRAVIMETRY

Chapter X Titrimetric analysis 223

A Theoretical considerations 223

X, 1 Titrimetric analysis 223

X, 2 Classification of reactions in titrimetric analysis 224

X, 3 Standard solutions 225

X, 4 Advantages of the use of the equivalent system 234

X, 5 Preparation of standard solutions 235

X, 6 Primary standard substances 235

A.1 Theory of acid-base titrations 236

X, 7 Neutralisation indicators 236

X, 8 Preparation of indicator solutions 242

X, 9 Mixed indicators 243

X, 10 Universal or multiple range indicators 244

X, 11 Neutralisation curves 244

X, 12 Neutralisation of a strong acid and a strong base 244

X, 13 Neutralisation of a weak acid with a strong base 247

X, 14 Neutralisation of a weak base with a strong acid 249

X, 15 Neutralisation of a weak acid with a weak base 251

X, 16 Neutralisation of a polyprotic acid with a strong base 251

X, 17 Titration of anions of weak acids (Brønsted bases) with strong acids. 'Displacement titrations' 253

X, 18 Choice of indicators in neutralisation reactions 255

A.2 Theory of complexation titrations 257

X, 19 Introduction 257

X, 20 Stability of complexes 257

X, 21 Factors influencing the stability of complexes 258

X, 22 A simple complexation titration 260

X, 23 Complexones 261

X, 24 Stability constants of EDTA complexes 264

X, 25 Titration curves 265

X, 26 Types of EDTA titrations 266

X, 27 Titration of mixtures, selectivity, masking and demasking agents 267

X, 28 Metal ion indicators 269

A.3 Theory of precipitation titrations 279

X, 29 Precipitation reactions 279

X, 30 Determination of end-points in precipitation reactions 281

A.4 Theory of oxidation-reduction titrations 288

X, 31 Change of the electrode potential during the titration of a reductant with an oxidant 288

X, 32 Formal potentials 291

X, 33	Detection of the end point in oxidation-reduction titrations	292
B	Experimental details	296
B.1	Aqueous acid-base titrations (Acidimetry and alkalimetry)	296
X, 34	Preparation of a standard acid	296
X, 35	Preparation of constant-boiling-point hydrochloric acid	297
X, 36	Direct preparation of 0.1 <i>M</i> -hydrochloric acid from the constant-boiling-point acid	297
X, 37	Preparation of approximately 0.1 <i>M</i> -hydrochloric acid and standardisation	298
X, 38	Preparation of standard alkali	301
X, 39	Standardisation of the approximately 0.1 <i>M</i> -sodium hydroxide	304
X, 40	Other standard substances for acidimetry and alkalimetry	305
X, 41	Standard barium hydroxide (baryta) solution	306
X, 42	Determination of the Na ₂ CO ₃ content of washing soda	306
X, 43	Determination of the strength of concentrated acids	308
X, 44	Determination of a mixture of carbonate and hydroxide. (Analysis of commercial caustic soda)	309
X, 45	Determination of a mixture of carbonate and hydrogen-carbonate	310
X, 46	Determination of boric acid	311
X, 47	Determination of ammonia in an ammonium salt	312
X, 48	Determination of nitrates	314
X, 49	Determination of phosphate (precipitation as quinoline molybdophosphate)	314
B.2	Complexation titrations	316
X, 50	Standard EDTA solutions	317
X, 51	Some practical considerations	317
	<i>Determination of cations</i>	319
X, 52	Determination of aluminium: back titration using Solochrome Black indicator	319
X, 53	Determination of barium: direct titration with Methyl Thymol Blue indicator	319
X, 54	Determination of bismuth: direct titration using Xylenol Orange indicator	320
X, 55	Determination of calcium: substitution titration using Solochrome Black (Eriochrome Black T) indicator	320
X, 56	Determination of copper: direct titration using Fast Sulphon Black F indicator	321
X, 57	Determination of iron(III): direct titration using Variamine Blue indicator	322
X, 58	Determination of nickel: direct titrations using (a) Murexide and (b) Bromopyrogallol Red as indicators	322

X, 59	Determination of silver: indirect method using potassium tetracyanonickelate(II) and nickel ion-murexide indicator	323
X, 60	Determination of sodium: indirect titration using Solochrome Black (Eriochrome Black T) indicator	323
X, 61	Details for the determination of a selection of metal ions by EDTA titration	324
	<i>Analysis of mixtures of cations</i>	325
X, 62	Determination of calcium and magnesium using Patton and Reeder's indicator	325
X, 63	Determination of calcium in the presence of magnesium using EGTA as titrant	327
X, 64	Determination of the total hardness (permanent and temporary) of water using Solochrome Black (Eriochrome Black T) indicator	328
X, 65	Determination of calcium in the presence of barium using CDTA as titrant	329
X, 66	Determination of calcium and lead in admixture using Methylthymol Blue indicator	329
X, 67	Determination of magnesium, manganese, and zinc in admixture: use of fluoride ion as a demasking agent	330
X, 68	Determination of chromium(III) and iron(III) in admixture: an example of kinetic masking	331
X, 69	Determination of manganese in presence of iron: analysis of ferromanganese	331
X, 70	Determination of nickel in presence of iron: analysis of nickel steel	332
X, 71	Determination of lead and tin in admixture: analysis of solder	333
X, 72	Determination of bismuth, cadmium and lead in admixture: analysis of a low-melting alloy	333
	<i>Determination of anions</i>	334
X, 73	Determination of halides (excluding fluoride) and thiocyanates	334
X, 74	Determination of phosphates	335
X, 75	Determination of sulphates	335
B.3	Precipitation titrations	336
X, 76	Preparation of 0.1 M-silver nitrate	336
X, 77	Standardisation of the silver nitrate solution	337
X, 78	Determination of chlorides	338
X, 79	Determination of iodides	339
X, 80	Determination of mixtures of halides with adsorption indicators	339
X, 81	Determination of mixtures of halides by an indirect method	340

X, 82	Preparation and use of 0.1 M-ammonium or potassium thiocyanate. Titrations according to Volhard's method.	340
X, 83	Determination of silver in a silver alloy	342
X, 84	Determination of chlorides (Volhard's method)	342
X, 85	Determination of fluoride: precipitation as lead chlorofluoride coupled with Volhard titration	345
X, 86	Determination of arsenates	344
X, 87	Determination of cyanides	345
X, 88	Determination of chlorides by titration with mercury(II) nitrate solution	346
X, 89	Determination of potassium	347
B.4 Oxidation—reduction titrations		348
<i>Oxidations with potassium permanganate</i>		348
X, 90	Discussion	348
X, 91	Preparation of 0.1 N-potassium permanganate	351
X, 92	Standardisation of permanganate solutions	351
X, 93	Determination of iron(II)	354
X, 94	Determination of calcium	354
X, 95	Analysis of hydrogen peroxide	355
X, 96	Determination of manganese dioxide in pyrolusite	356
X, 97	Determination of nitrites	356
X, 98	Determination of persulphates	357
X, 99	Determination of manganese in steel	358
<i>Oxidations with potassium dichromate</i>		359
X, 100	Discussion	359
X, 101	Preparation of 0.1 N potassium dichromate	360
X, 102	Standardisation of potassium dichromate solution against iron	360
X, 103	Determination of iron(II)	360
X, 104	Determination of chromium in a chromium(III) salt	361
X, 105	Determination of chromium in chromite	362
X, 106	Determination of chlorate	363
<i>Oxidations with cerium(IV) sulphate solutions</i>		363
X, 107	General discussion	363
X, 108	Preparation of 0.1 N cerium(IV) sulphate	365
X, 109	Standardisation of cerium(IV) sulphate solutions	366
X, 110	Determination of copper	367
X, 111	Determination of molybdate	367
X, 112	Determination of tellurite	368
X, 113	Determination of cerium(III)	368
X, 114	Determination of nitrites	369
<i>Oxidation and reduction processes involving iodine. Iodometric titrations</i>		370
X, 115	General discussion	370

X, 116	Detection of the end-point	372
X, 117	Preparation of 0.1 <i>N</i> -sodium thiosulphate	374
X, 118	Standardisation of sodium thiosulphate solutions	375
X, 119	Preparation of 0.1 <i>N</i> -iodine solution	377
X, 120	Standardisation of iodine solutions	378
X, 121	Determination of copper in crystallised copper sulphate	379
X, 122	Determination of copper in an ore	380
X, 123	Determination of chlorates	381
X, 124	Analysis of hydrogen peroxide	381
X, 125	Determination of the available chlorine in bleaching powder	382
X, 126	Determination of arsenic(V)	383
X, 127	Determination of sulphurous acid and of sulphites	383
X, 128	Determination of hydrogen sulphide and sulphides	384
X, 129	Determination of hexacyanoferrates(III)	385
X, 130	Standardisation of an acid	385
<i>Oxidations with potassium iodate</i>		386
X, 131	General discussion	386
X, 132	Preparation of 0.025 <i>M</i> -potassium iodate	387
X, 133	Determination of arsenic or of antimony	387
X, 134	Determination of mercury	388
X, 135	Determination of hydrazine	389
X, 136	Determination of vanadates	390
<i>Oxidations with potassium bromate</i>		390
X, 137	General discussion	390
X, 138	Preparation of 0.1 <i>N</i> -potassium bromate	392
X, 139	Determination of antimony or of arsenic	392
X, 140	Determination of metals by means of 8-hydroxyquinoline ('oxine')	393
X, 141	Determination of hydroxylamine	394
<i>The reduction of higher oxidation states</i>		394
X, 142	General discussion	394
X, 143	Reduction with amalgamated zinc: the Jones reductor	395
X, 144	Reduction with liquid amalgams	397
X, 145	The silver reductor	398
X, 146	Other methods of reduction	399
X, 147	References	401
X, 148	Selected bibliography	402

Chapter XI Gravimetry 403

XI, 1	Introduction to gravimetric analysis	403
XI, 2	Precipitation methods	403
XI, 3	The colloidal state	404
XI, 4	Supersaturation and precipitate formation	407

XI, 5	The purity of the precipitate. Coprecipitation	409
XI, 6	Conditions of precipitation	410
XI, 7	Precipitation from homogeneous solution	411
XI, 8	Washing of the precipitate	413
XI, 9	Ignition of the precipitate. Thermogravimetric method of analysis	414
<i>Quantitative separations based upon precipitation methods</i>		415
XI, 10	Fractional precipitation	415
XI, 11	Organic precipitants	419
XI, 12	Volatilisation or evolution methods	430
<i>Practical gravimetric analysis</i>		431
XI, 13	General discussion	431
XI, 14	Calculations of gravimetric analysis	431
<i>Simple gravimetric determinations</i>		432
XI, 15	Determination of water of hydration in crystallised barium chloride	432
XI, 16	Other determinations by ignition	432
XI, 17	Determination of chloride as silver chloride	433
XI, 18	Determination of aluminium as aluminium oxide	435
XI, 19	Determination of aluminium as the 8-hydroxyquinolate, $\text{Al}(\text{C}_9\text{H}_6\text{ON})_3$, with precipitation from homogeneous solution	436
XI, 20	Determination of calcium as oxalate	437
XI, 21	Determination of iron as iron(III) oxide	440
XI, 22	Determination of lead as chromate	444
XI, 23	Determination of magnesium as the ammonium phosphate hexahydrate and as the pyrophosphate	444
XI, 24	Determination of nickel as the dimethylglyoximate	447
<i>Systematic gravimetric analysis</i>		449
XI, 25	General discussion	449
<i>Cations</i>		449
XI, 26	Aluminium	449
XI, 27	Ammonium	450
XI, 28	Antimony	450
XI, 29	Arsenic	451
XI, 30	Barium	452
XI, 31	Beryllium	454
XI, 32	Bismuth	455
XI, 33	Cadmium	456
XI, 34	Calcium	458
XI, 35	Cerium	458
XI, 36	Chromium	459
XI, 37	Cobalt	460

XI, 38	Copper	462
XI, 39	Gold	464
XI, 40	Iron	465
XI, 41	Lead	467
XI, 42	Lithium	468
XI, 43	Magnesium	469
XI, 44	Manganese	470
XI, 45	Mercury	470
XI, 46	Molybdenum	471
XI, 47	Nickel	473
XI, 48	Palladium	474
XI, 49	Platinum	474
XI, 50	Potassium	475
XI, 51	Selenium and tellurium	477
XI, 52	Silver	479
XI, 53	Sodium	479
XI, 54	Strontium	481
XI, 55	Thallium	482
XI, 56	Thorium	483
XI, 57	Tin	484
XI, 58	Titanium	485
XI, 59	Tungsten	486
XI, 60	Uranium	487
XI, 61	Vanadium	488
XI, 62	Zinc	488
XI, 63	Zirconium	490
<i>Anions</i>		
XI, 64	Borate	491
XI, 65	Bromate and bromide	491
XI, 66	Carbonate	491
XI, 67	Chlorate	492
XI, 68	Chloride	493
XI, 69	Cyanide	494
XI, 70	Fluoride	494
XI, 71	Fluorosilicate	494
XI, 72	Hexacyanoferrate(III)	495
XI, 73	Hexacyanoferrate(II)	496
XI, 74	Hypophosphite	496
XI, 75	Iodate	496
XI, 76	Iodide	496
XI, 77	Nitrate	496
XI, 78	Nitrite	497
XI, 79	Oxalate	497
XI, 80	Perchlorate	498
XI, 81	Phosphate	498

XI, 82	Phosphite	500
XI, 83	Silicate	501
XI, 84	Sulphate	504
XI, 85	Sulphide	507
XI, 86	Sulphite	510
XI, 87	Thiocyanate	510
XI, 88	Thiosulphate	510
XI, 89	References	511
XI, 90	Selected bibliography	511

PART E ELECTROANALYTICAL METHODS

Chapter XII Electro-gravimetry 515

XII, 1	Theory of electro-gravimetric analysis	515
XII, 2	Electrode reactions	518
XII, 3	Overpotential	519
XII, 4	Completeness of deposition	521
XII, 5	Electrolytic separation of metals	522
XII, 6	Character of the deposit	523
XII, 7	Electrolytic separation of metals with controlled cathode potential	524

Electrolytic determinations at constant current 527

XII, 8	Apparatus	527
XII, 9	Copper	532
XII, 10	Lead	535
XII, 11	Cadmium	536
XII, 12	Silver	537
XII, 13	Electrolytic separation and determination of copper and nickel	537

Electrolytic determinations with controlled cathode potential 538

XII, 14	Antimony, copper, lead, and tin in an alloy (e.g., bearing metal)	539
XII, 15	Internal electrolysis	540
XII, 16	References	540
XII, 17	Selected bibliography	541

Chapter XIII Coulometry 542

XIII, 1	General discussion	542
XIII, 2	Coulometry at controlled potential	543
XIII, 3	Separation of nickel and cobalt by coulometric analysis at controlled potential	548

Coulometry at constant current: coulometric titrations 548

XIII, 4	General discussion	548
---------	--------------------	-----

XIII, 5	Instrumentation	551
XIII, 6	Circuit and cell for coulometry at controlled current	552
XIII, 7	External generation of titrant	555
XIII, 8	Experimental details for typical coulometric titrations at constant current	556
XIII, 9	Antimony(III)	557
XIII, 10	Thiosulphate	558
XIII, 11	Oxine (8-hydroxyquinoline)	558
XIII, 12	Potassium dichromate (dichromate ion)	559

Chapter XIV Potentiometry 566

XIV, 1	Introduction	566
--------	--------------	-----

Reference electrodes 568

XIV, 2	The hydrogen electrode	568
XIV, 3	The calomel electrode	569
XIV, 4	The silver-silver chloride electrode	571

Indicator electrodes 571

XIV, 5	General discussion	571
XIV, 6	The hydrogen electrode	572
XIV, 7	The antimony electrode	572
XIV, 8	The glass electrode	573

Ion sensitive electrodes 575

XIV, 9	Alkali metal ion-responsive glass electrodes	575
XIV, 10	Other solid membrane electrodes	577
XIV, 11	Liquid-membrane electrodes	577
XIV, 12	Commercially available ion-sensitive electrodes	578

Instrumentation and measurement of cell e.m.f. 579

XIV, 13	Potentiometers	579
XIV, 14	pH meters	582
XIV, 15	Selective ion meters	584

Direct potentiometry 585

XIV, 16	Determination of pH	585
XIV, 17	Determination of fluoride	589

Potentiometric titrations 591

XIV, 18	Potentiometric titrations; classical method	591
---------	---	-----

XIV, 19	Use of bimetallic electrode systems	592
XIV, 20	Polarised indicator electrodes	593
XIV, 21	Differential potentiometric titration	593
XIV, 22	Automatic potentiometric titrations	594
XIV, 23	Location of end points	596
XIV, 24	Some general considerations	600
XIV, 25	Some experimental details for potentiometric titrations	602
XIV, 26	Determination of copper	605
XIV, 27	Determination of chromium	606
XIV, 28	Determination of manganese	606
XIV, 29	Potentiometric EDTA titrations with the mercury electrode	607
XIV, 30	Determination of iron(III) with EDTA	610
XIV, 31	Standardisation of potassium permanganate solution with potassium iodide	610
XIV, 32	Determination of nickel and of cobalt by complexation with cyanide	611
XIV, 33	Determination of fluoride by a null-point method	612
XIV, 34	References	613
XIV, 35	Selected bibliography	614

Chapter XV Conductometric titrations 615

XV, 1	General considerations	615
XV, 2	The measurement of conductivity	616

Conductometric (low frequency) titrations 617

XV, 3	The basis of conductometric titrations	617
XV, 4	Apparatus and measurements	619
XV, 5	Applications of conductometric titrations	621
XV, 6	Some experimental details for conductometric titrations	625

High frequency titrations 626

XV, 7	General considerations	626
XV, 8	Apparatus	628
XV, 9	Advantages of the technique	629
XV, 10	Some examples of high frequency titrations	629
XV, 11	References	630
XV, 12	Selected bibliography	631

Chapter XVI Voltammetry 632

XVI, 1	Introduction	632
--------	--------------	-----

Polarography 633

XVI, 2	Basic principles	633
--------	------------------	-----

Direct current polarography 636

XVI, 3	Theoretical principles	636
XVI, 4	Quantitative technique	642

XVI, 5	Evaluation of quantitative results	644
XVI, 6	Measurement of wave heights	645
XVI, 7	Manual non-recording polarographs	647
XVI, 8	Commercial polarographs	648
XVI, 9	Ancillary equipment for polarography	650
XVI, 10	Determination of the halfwave potential of the cadmium ion in <i>M</i> -potassium chloride solution	653
XVI, 11	Determination of cadmium in solution	655
XVI, 12	Investigation of the influence of dissolved oxygen	655
XVI, 13	Determination of lead and copper in steel	656
<i>Alternating current polarography</i>		656
XVI, 14	The nature of a.c. methods	656
XVI, 15	Simple a.c. polarography	657
XVI, 16	Square-wave polarography	658
XVI, 17	Pulse polarography	658
<i>Oscillographic polarography</i>		660
XVI, 18	Controlled potential methods	660
XVI, 19	Controlled current methods	661
XVI, 20	Instrumentation	662
XVI, 21	Quantitative determinations	663
<i>Anodic stripping voltammetry</i>		664
XVI, 22	Basic principles	664
XVI, 23	Some fundamental features	665
XVI, 24	Instrumentation	667
<i>Chronopotentiometry</i>		668
XVI, 25	Basic principles	668
XVI, 26	Experimental procedure	669
XVI, 27	References	670
XVI, 28	Selected bibliography	670
Chapter XVII Amperometry		672
XVII, 1	Amperometric titrations	672
XVII, 2	Technique of amperometric titrations with the dropping mercury electrode	675
XVII, 3	Determination of lead with standard potassium dichromate solution	676
XVII, 4	Determination of sulphate with standard lead nitrate solution	677
XVII, 5	Determination of nickel with dimethylglyoxime	678
XVII, 6	Determination of fluoride with standard thorium nitrate solution	679
XVII, 7	Determination of zinc with EDTA	680
XVII, 8	Titration of an iodide solution with mercury(II) nitrate solution	680
