CHINARE DATA REPORT

NO. 4

(METEOROLOGY 4)

Radiation Data at Zhongshan Station, Antarctica
from Feb. 1990 to Jan. 1991

The Project Supported by State Antarctic Committee
and National Natural Science Foundation of China

POLAR RESEARCH INSTITUTE OF CHINA

Radiation Data from Feb. 1990–Jan. 1991 at Zhongshan Station

Bian Lingen Lu Longhua and Jia Pengqun

(Chinese Academy of Meteorological Sciences, Beijing 100081, CHINA)

Radiation and micrometeorological observations using a 32m tower were carried out as part of the CHINARE–VI program. The observations are aimed at the investigations of the structure of the atmospheric boundary layer and the heat balance components near the surface. Zhongshan Station is located at $69^{\circ} 22' S$, $76^{\circ} 22' E$ on Lassman Hill of Antarctic Continent(Fig.1). Its elevation is 17.7m above the sea level. The degrees of the horizontal obstruction around observation site is less than 4 degree(Fig. 2). During the observation period, the condition of the surface changed from bare land to the snow-covered surface with the maximum snow depth of 95 cm.

This data report gives the results of radiation observation. The observation period is from February 12,1990 to January 31,1991. Three radiation components, i.e., global and reflected shortwave downward radiation (Q and QA) and the net radiation including shortwave and longwave(B) were measured by pyranometers($0.3\text{--}2.4\mu m$) and net pyrradiometer ($0.3\text{--}30.0\mu m$). These instruments were placed at height of 1.5m above the surface. The sensitivity constants of the meters for measuring Q , QA and B are 7.26 , 8.10 and $8.31 \mu v / Wm^{-2}$ respectively. The resolution of the meters is $1 Wm^{-2}$, the precision $\pm 7 Wm^{-2}$. The calibration of the meters in Chinese Academy of Meteorological Sciences has been done before and after the observations in Antarctica. All observational elements were sampled every minute and recorded by data logger and computer system. The hourly mean values of these elements are presented in this volume(Tables 1, 2 and 4).

Other two computative elements, i.e., the surface albedo(A) and effective radiation in the surface(F) are also given(Tables 3 and 5). The value of A is obtained by

$$A = \frac{\sum QA}{\sum Q} \quad (1)$$

and the value of F is calculated by

$$F = Q(1 - A) - B \quad (2)$$

To give a general idea on the radiative situation of the station, the monthly mean diurnal variations and the daily variations throughout the observing period of all elements except QA in the representative months (January, April, July and October) are shown in Figs. 3 and 4. Numerals 999 are printed in tables for missing data.

Acknowledgments. The authors wish to acknowledge the joint efforts of all members of Chinese National Antarctic Research Expedition-VI (CHINARE-VI), who led by Mr. Li Zhenpai and Guo Xiaogang(in summer) and Mr. Dong Zhaoqian(in winter). Particular thanks are due to Lu Changgui and Xue Zhenhe for their taking part in the observation and to Mr. Zhou Guoxian and Ms. Wei Shuang who were also responsible for the computer processing of the data.

中山站 1990 年 2 月—1991 年 1 月辐射资料

卞林根 陆龙骅 贾朋群

(中国气象科学研究院, 北京 100081)

作为中国第六次南极考察队科考计划的一部分, 我们在中山站安装了 32 米气象塔, 进行了辐射平衡和微气象观测。其主要目的是考察和研究该地区近地而边界层的物理结构和热量平衡的基本特征。中山站($69^{\circ}22' S, 76^{\circ}22' E$)位于东南极大陆的拉斯曼丘陵上, 海拔高度 17.7 米(图 1)。辐射观测点下垫面较为平坦, 水平自然遮敝度小于 4° (图 2)。观测期间, 地表积雪有明显的季节变化, 暖季(12—2 月)积雪少, 寒季(3—11 月)积雪多, 最厚积雪为 95cm。

本报告给出了 1990 年 2 月 1 日至 1991 年 1 月 31 日辐射观测的基本资料。观测的辐射平衡分量有总辐射(Q)、反射辐射(QA)和净辐射(B)。Q 和 QA 观测采用的是天空辐射表(波长 $0.3\text{--}2.40\mu\text{m}$), B 观测采用的是净全辐射表(波长 $0.3\text{--}30.0\mu\text{m}$)。总辐射表、反射辐射表和净辐射表的灵敏度分别为 7.26、8.10 和 $8.31\mu\text{V}/\text{W m}^{-2}$ 。辐射表安装高度距地面 1.5 米。辐射仪器在南极观测前后, 在中国气象科学研究院检定所进行了标定。辐射采样仪的分辨率为 1W/m^2 , 精度为 $\pm 7\text{W/m}^2$ 。本次考察设定的采样时间间隔为 1 分钟。表 1、表 2 和表 4 分别给出总辐射、反射辐射和净辐射观测期间的每小时平均值。另外, 表 3 和表 5 还给出了计算量反射率(A)和有效辐射(F)的每小时平均值。反射率和有效辐射分别由公式(1)和(2)获得:

$$A = \frac{\sum Q_A}{\sum Q} \quad (1)$$

$$F = Q(1 - A) - B \quad (2)$$

为了解中山站地区各个辐射平衡分量的基本特点, 图 3 和图 4 分别给出了总辐射、反射率、净辐射和有效辐射的日变化(1 月、4 月、7 月、10 月)和整个观测期间的日际变化。本资料缺测用 999 表示。

致谢:

本次观测得到了中国第六次南极考察队队长李振培、国晓港、董兆乾和全体考察队员的大力协助, 逯昌贵、薛振和、王星参加了部分仪器安装和观测工作, 周国贤和魏霜参加了辐射资料的处理工作, 谨此衷心感谢。
