序

《中国水产业与人力资源开发》一书，现在同广大读者见面了。这本书是根据农业部水产司已提供给联合国粮农组织的《中国内陆水产养殖与人力资源研究报告》和《在改革中崛起的中国水产业》（均为中、英文）综合编写而成。

这本书对我国悠久的水产业，特别是80年代以来，在改革、开放的大背景下，认真贯彻中央一系列有关方针、政策，以养殖为主，养殖、捕捞、加工并举，因地制宜，各有侧重；以及从计划经济转变为社会主义市场经济所进行的重大改革，作了较系统的阐述。14年来，全国水产品产量增长了2.3倍，1992年产量达到1558万吨，连续三年居世界首位。随着水产品有效供给的大幅度增加，全国城乡“吃鱼难”问题已明显缓解。实践证明，中国现阶段的发展水产业指导思想、发展方针和基本路子，围绕社会主义商品生产和市场经济新体制所进行的一系列重大改革，是正确的、成功的，为发展有中国特色的水产业奠定了良好基础。

当前，水产业要不要大发展？无论是从资源开发的可能，还是从国内外市场消费的需求，以及2000年以后人类对水产食品的期望，回答都是

肯定的。中国发展节粮、节地型的水产业，特别是水产养殖业的潜力相当大。我希望各地从扩大人类生存空间的高度，增强蓝色国土的意识，关心、支持水产业的发展，象重视耕地那样，重视海洋和内陆水域的开发利用，作为长期发展战略来抓。要继续深化改革，依靠科技进步，不断增加投入，在提高生产水平的同时，加快开发利用步伐，向浅海、滩涂、外海、远洋以及低洼盐碱荒地、内陆大中型水域要蛋白、要财富，同时继续加强与世界各国各地区的渔业交往与合作，促进中国水产业不断创新，为人类作出更大贡献！

农业部副部长（签名）

Preface

Manpower in Acquaculture Development in China is now available to the readers . The book is compiled , based on two reports submitted to the United Nations Food and Agriculture Organization by the Department of Aquatic Products , Ministry of Agriculture , namely “ Study on Manpower in Acquaculture Development in China ” and “ Reform and Development of China's Fisheries ” . (both papers available in Chinese and English)

The book gives a systematic account of the development of China's age - old aquatic production , particularly since the 80's , which takes aquaculture as the main , lays equal emphasis on aquaculture , fishery and processing and selects priorities according to local conditions while carrying out a series of relevant policies of the central government during reforms and open - up . It also draws a full picture of the major transformations which have occurred

during the transition from planned economy to socialist market economy . Within 14 years , China's aquatic production has increased by 2.3 times . The figure in 1992 reached 15.58 million tons , the first place in the world for the third consecutive year . Along with the rapid increase in the available supply of aquatic products , there has been an obvious easing of the " fish shortage " in China's urban and rural areas . Practice has proved the correctness and successfulness of the current fisheries development guidelines , policies and fundamental course as well as a number of major transformations undertaken for the new system of socialist commodity production and market economy because they have laid a sound foundation for the development of fisheries with Chinese characteristics.

Do we need a rapid development of fisheries currently ? We find the answer affirmative , taking into consideration of the resource development possibilities , the consumer demands in the domestic and international markets and the mankind's expectation of

aquatic food after the year 2 0 0 0 . There is a big potential in China for the development of grain and land saving fisheries , especially aquaculture . I hope all local authorities should strengthen their awareness of the “ blue territory ” so as to expand the space for human survival and give attention and support to the development of fisheries . We should give equal attention to the development and utilization of sea and inland water bodies as to arable land and see it as a long - term development strategy . We should continue deepening reforms and increasing input with the help of scientific and technological advancement . While upgrading production level , We should speed up our development and utilization process in order to seek protein and wealth from shallow seas , mudflats , offshore waters , distant waters , low-lying saline-alkaline wasteland and large-and medium-sized inland water bodies. Meanwhile we should go on enhancing our exchange and cooperation in fisheries with other countries and regions in the world so as to help bring new ideas to China's fisheries and make greater contribution to mankind!

Zhang Yan Xi Vice Minister, Ministry of
Agriculture.

联合国粮农组织对 《中国内陆水产养殖和 人力资源研究报告》的总评价

这份综合性报告的文章结构很好，提供了有关中国水产养殖发展和巩固方面的有价值的信息。这个报告是在大量的数字统计的基础上写成的，是有关当前中国渔业生产方式和实践方面有价值的信息来源，并且包罗了不同生产组织形式的技术和经济活力的分析数据。

General Comments on Report of Manpower in Aquaculture Development of China by FAO

The report is comprehensive and well structured, provides valuable information on the evolution and consolidation of the aquaculture sub-sector in China, and is supported by adequate statistical data. The report is a valuable source of information on present production methods and practices, and contains analytical data on the technical and economic viability of the different organizational forms of production.

目 录

序

在改革中崛起的中国水产业	(127)
第一部分 生产的迅速发展与结构的调整	(127)
I 水产品总产量: 纵向和横向对比	(127)
II 海洋渔业	(128)
III 内陆渔业	(130)
IV 国内市场供应明显改观	(132)
V 水产品出口有所增长	(132)
VI 远洋渔业的起步与拓展	(133)
VII 渔民收入大幅度提高	(133)
附: 关于统计数字的说明	(134)
第二部分 改革带来的巨大推动力	(134)
I 确立符合国情的发展水产业的指导思想、方针和路子	(135)
II 渔业经济政策从逐步放开到重大突破	(138)
III 依靠科学技术进步, 提高水产生产水平	(141)
IV 多方面增加投入, 增强水产业发展后劲	(142)
V 在开放、搞活的同时, 加强渔业法制建设	(143)
VI 发挥产供销一体化管理体制的协调、决策职能作用	(144)
附: 中国水产行政管理机构	(144)
第三部分 持续发展面临困难	(145)
I 海洋渔业资源利用仍不合理	(145)
II 发展养殖业不利因素增多	(145)

III	水产品加工仍是薄弱环节·····	(146)
IV	水产品价格缺乏有效的宏观调控和引导·····	(146)
V	渔业劳动者素质较差·····	(146)
VI	科技进步不适应生产的发展·····	(146)
VII	渔政管理难度较大·····	(147)
VIII	渔业生产经营的组织化程度较低·····	(147)
第四部分 前景展望与主要对策·····		(148)
I	市场潜力·····	(148)
II	开发潜力·····	(148)
III	增产潜力·····	(149)
IV	发展规划·····	(149)
V	主要生产对策·····	(149)

附表

表 A	中国某些年份水产品产量·····	(150)
表 B	主要产鱼国家 1979—1990 年水产品产量·····	(151)

PREPARATION OF THIS DOCUMENT	(169)
SECTION I. Rapid production development and structural adjustment	(171)

1. Total Production of aquatic products	(171)
2. Marine fisheries	(172)
3. Inland fisheries	(174)
4. Consumption increase in the domestic market	(177)
5. Increase in exports	(177)
6. Initiation and development of distant water fisheries	(178)
7. Substantial income increase of fishermen	(178)
SECTION I. Reforms and adjustments in fisheries	
1. Establishing appropriate fisheries development policies	(179)
2. Relaxation of fisheries economic policies	(182)
3. Enhancement of fishery science and technology development	(186)
4. Increase of inputs to enhance fisheries development	(188)
5. Enhancement of the fisheries legal system	(189)
SECTION II. Constraints in the continuous development of fisheries	
1. Irrational utilization of marine resources	(191)
2. Increase of unfavourable factors in the development of aquaculture	(192)
3. Inadequate fishery processing	(192)
4. Insufficient guidance on regulation and control	(192)
5. Low qualification of fishery labourers	(193)
6. Inadaptability of science and technology to the development of fisheries	(193)
7. Management constraints	(194)
8. Poor organization of fisheries production	(194)
SECTION IV. Prospects and major development measures	
1. Market potential	(195)
2. Development potential	(195)
3. Potential for increasing production	(196)
