Passage One

Most dog owners feel that their dogs are their best friends. Almost everyone likes dogs because they try hard to please their owners. One of my favorite stories is about a dog who wanted his owner to please him.

One of my best friends has a large German shepherd named Jack. These dogs

are often very intelligent. Every Sunday afternoon, my friend takes Jack for a walk in the park. Jack likes these long walks very much.

One Sunday afternoon, a young man came to visit my friend. He stayed a long time, and he talked and talked. Soon it was time for my friend to take Jack for his walk, but the visitor didn't leave. Jack became very worried about his walk in the park. He walked around the room several times and then sat down directly in front of the visitor and looked at him. But the visitor paid no attention. He continued talking. Finally, Jack couldn't stand it any longer. He went out of the room and came back a few minutes later. He sat down again in front of the visitor, but this time he held the man's hat in his mouth.

German shepherds aren't the only intelligent dogs. Another intelligent dog is a Seeing Eye dog. This is a special dog which helps blind people walk along the streets and do many other things. We call these dogs Seeing Eye dogs because they are the "eyes" of the blind people and they help them to "see". Seeing Eye dogs generally go to special schools for several years to learn to help blind people.

Passage Two

In everyday usage “hot” means “having a lot of heat.” Many people think that “cold” is something completely separated from heat. But this is not true. “Cold” simply means “having very little heat.”

Your life depends on heat. In fact, every little thing depends on it. Without heat, every living thing would be frozen to death. All living things get their heat from the sun, which provides the conditions in which life is possible.

Since before the dawn of history, man has been able to make his own heat. He has been able to release the sun’s heat that is trapped in things such as wood, coal, and oil. And he has been able to use this heat.

Heat has made civilization possible. With heat, man could melt metals. As man learned to use metals and fuels, industries grew. As a result, engines were invented. These are machines that change heat energy into mechanical energy. Engine can do the work of many men. Without engines industrial civilization is impossible.

Yet when the first engines were built in the late 17th century, men were still wondering about the nature of heat. “What is it?” they asked. Not until the early years of the 19th century did they find the right answer.

 D. all the sun’s heat is trapped in things
69. Which of the following is TRUE?
 A. Without engines civilization is impossible.
 B. Without engines we have no industrial revolution.
 C. Engines came before civilization.

- C. men found the nature of heat in the 19th century

Passage Three

Once upon a time there was a powerful Persian king who, in spite of his uncertain birth, wished to act powerfully so that no one would doubt his present high position.

Having heard that a certain Greek, who was in prison, was wise, he sent for him and asked him his opinion about a beautiful horse he had received as a present from one of his men. Pleased with the clever replies the Greek had made, he gave him a piece of bread as a reward.

A second time the king sent for him because he wished to learn the value of some wonderful stones he had just received. The Greek's reply and the reasons he was able to give were again so admirable that the king gave him two pieces of bread.

As the king could learn nothing of his own birth, he sent for the learned man a third time and wanted to know whose son he was. The Greek, after thinking some time, dared to reply that he must have been a baker's son; because, if he had been a king's son, he would have given cities instead of bread as a reward for such services.

Our surroundings are being polluted faster than nature and man's present efforts cannot prevent it. Time is bringing us more people, and more people will bring us more industry, more cars, large cities and the growing use of man-made materials.

Isn't it time we stopped to ask ourselves where we are going, and why? It makes one think of the story about the airline pilot who told his passengers over the loudspeaker: "I've some good news and some bad news. The good news is that we're making rapid progress at 530 miles per hour. The bad news is that we're lost and don't know where we're going." The sad fact is that this becomes a true story when spoken of our modern society.
