PREFACE

The course that uses *Microcomputer Use: Software Applications and Problem Solving with WordPerfect, WordStar, Lotus 1-2-3, and dBASE III Plus* may well be the most interesting and useful one students take. It would be difficult to think of many academic areas in which the developments in technology continue to be so rapid and astonishing, and virtually no career or profession remains untouched by the everchanging role of the microcomputer. Whether students enter business, teaching, or the professions, they will interact with the computer. Facility in microcomputer use is a highly valued asset in the work place.

It is obvious that this skill is desirable. But which aspects of computer use are best to include in a microcomputer course? What types of applications are most appropriate for students? And how can instructors *educate* rather than simply *train* students in microcomputer use? To address these questions, *Microcomputer Use: Software Applications and Problem Solving* uses the following features.

Concepts should be stressed along with techniques, so that education and skill building are combined. Different manufacturers of the same type of software give their packages different procedures and capabilities. New versions of the same software package differ from their predecessors (as can be seen in WordPerfect's versions 4.2 and 5.0, presented simultaneously in Chapters 3–5). If students have been taught only which buttons to push—if they have been trained but not educated—then their knowledge will quickly become obsolete. Much better prepared for change are the students who grasp the technological and business needs that the various software packages attempt to meet. In *Microcomputer Use: Software Applications and Problem Solving*, each lesson first presents the concepts—to help educate the user. The tutorials then train the user in which buttons to push to produce specific results.

CONCEPTUAL FOUNDATION

**TUTORIALS
AND EXERCISES
WITH
REAL-WORLD
APPLICATIONS**

Once they know the conceptual bases for different techniques and applications, students learn best by *doing*. The tutorials and exercises in each lesson of *Microcomputer Use: Software Applications and Problem Solving* follow this “learn by doing” approach. Whenever possible, they focus on practical applications—such as using word processing to produce business letters, resumé, and term papers; using a spreadsheet to prepare an individual budget, analyze financial data, and create charts and graphs to display and compare data more clearly and imaginatively; and using a database to maintain a list of book or compact disk titles or the list of customers and inventories required in many typical business applications.

**COMPREHENSIVE,
VERSATILE
STRUCTURE**

Microcomputer Use: Software Applications and Problem Solving is composed of 13 lessons organized into 5 major parts. Part One, Microcomputer Fundamentals, provides an introduction to microcomputer hardware and software, including a discussion of the essential MS-DOS system commands each student needs to prepare a disk for future exercises; Part Two, Word Processing, includes three lessons on word processing; Part Three, Electronic Spreadsheets, has three lessons about spreadsheets; and Part Four, Database Management, presents three lessons about database management. Part Five, Other Microcomputer Applications, contains lessons on using the microcomputer for data communications, statistics and graphics, and various other management applications.

Students who have little or no experience using a microcomputer should certainly begin with Part One. Parts Two through Four can be studied in any order, but it is usually most useful to study the parts in the order presented, especially if output from the spreadsheet or the database management system is to be integrated into a document produced on a word processor.

Each lesson contains an extensive discussion of key concepts, a summary, and exercises that range from simple to challenging. Lessons 1–11, which deal with the operating system and specific software applications, contain tutorials that help students truly understand and appreciate the concepts and reach a competent, confident skill level.

The tutorials and exercises provide over 100 hours of computer lab time. The tutorials teach the use of a software package in a step-by-step manner, taking the student slowly and thoroughly from booting the microcomputer, to entering specific data, to saving data on a file, to retrieving and editing that file, to printing the final product. The exercises, which let students practice their new knowledge, range from simple reinforcement of skills, through mastery of a wide variety of topics, to more difficult, project-length assignments.

Students need access to software that is reasonable in cost yet, to the greatest degree possible, full-featured, up-to-date, and similar to what they are likely to find in the work place. In the areas of databases and spreadsheets, identifying the most popular commercial packages is relatively easy: dBASE III Plus and Lotus 1-2-3, both covered here, are currently the most popular packages. In word processing, however, the choice is not so obvious. WordStar has been the industry leader, but WordPerfect is currently the best seller. Therefore, we have included them both. Also, for those who prefer an inexpensive work-alike of Lotus 1-2-3, a VP-Planner/VP-Planner Plus supplement is available. Some schools prefer, and can afford, to purchase sufficient copies of the latest versions of these commercial software packages. Others will opt to use educational versions, which may not contain all the options of the commercial versions but will be more than sufficient for almost every conceivable student application.

Harcourt Brace Jovanovich, the publisher of this textbook, has contracted with the commercial software producers to make the most recent educational versions of several of the above-mentioned packages available at no cost to schools that adopt this book. Specifications for each of these packages are given on page 82 for WordPerfect, page 340 for dBASE III Plus, and on page 547 for VP-Planner Plus. Whether students use the full commercial version or the educational version of the software, *Microcomputer Use: Software Applications and Problem Solving* will fit their needs. For still other schools or individuals who prefer to use software specifically created for educational purposes but featuring the typical “commercial” options, another version of this book—*Microcomputer Use: Word Processors, Spreadsheets, and Data Bases*, Second Edition, by Teresa Alberte-Hallam, Stephen F. Hallam, and James Hallam—is available with accompanying free MicroUSE software for the IBM PC and compatibles.

SOFTWARE OPTIONS

Although students may learn how to apply the personal computer using the currently most popular commercial software packages, they should be introduced to the main features of some of the competing packages, such as SuperCalc, R:BASE, and Paradox. No one software package can suit every need, but each has advantages. *Microcomputer Use: Software Applications and Problem Solving* examines the concerns involved in selecting the appropriate software for word processing, spreadsheet, database, and other applications and briefly presents the main features of over a dozen packages.

TIPS ON SELECTION AND COMPARISON OF SOFTWARE

The major portion of the book is devoted to word processing, spreadsheets, and databases, but several other exciting and useful areas of application are also considered: data communications and public-access databases such as

OTHER APPLICATIONS

CompuServe, statistical and graphics software, and a variety of other up-and-coming areas, including artificial intelligence and expert systems. For example, CompuServe currently has approximately 400,000 subscribers and, to users who have a PC and a modem access, offers hundreds of valuable online databases, a source we found invaluable in preparing up-to-date material for this book. In fact, our CompuServe electronic address is 72307,450, and we would appreciate hearing from users of *Microcomputer Use: Software Applications and Problem Solving*.

ANCILLARY MATERIALS

The Instructor's Manual that accompanies *Microcomputer Use: Software Applications and Problem Solving* contains suggested course syllabi, instructor notes and activities, and sample test questions. A data disk for student use contains the data from a select number of exercises.

ACKNOWLEDG- MENTS

We are grateful to the instructors and students who have used the first two editions of *Microcomputer Use* and have graciously shared their suggestions for improvement.

We also want to thank the many students and colleagues at Northern Illinois University who read various drafts of the manuscript and worked the tutorials and exercises.

Special thanks go to the people who prepared formal reviews of *Microcomputer Use: Software Applications and Problem Solving*: James Buxton, Tidewater Community College, Virginia Beach Campus; Paulette Gannett, Broome Community College; Martha Hedley, Jim Im, University of New Orleans; Robert Jenkins, Utah Valley Community College; Karen Watterson, and Sharon West, University of South Alabama. This textbook also benefitted from the suggestions of the reviewers of the Second Edition: Gerald Adkins, University of Georgia; Warren J. Boe, University of Iowa; Qwynne Larsen, Metropolitan State College; Carolyn B. Regner, University of Wisconsin, Oshkosh; Paul W. Ross, Millersville University; Leonard Sweet, University of Akron; and John Zales, Harrisburg Area Community College.

We also thank the staff at Harcourt Brace Jovanovich whose support and effort made this book possible: Cate DaPron, Cheryl Hauser, Marilyn Britt, Kay Faust, Maggie Porter, Suzann Nelson, Sarah Randall, and Bill Teague.

Finally, we want to thank our families, especially our daughters, Patricia and Margaret, for their love and understanding during those times when their parents were bleary-eyed and short-tempered from staying up late to meet the hectic deadlines and make the last-minute changes required to keep up with new software releases.

Teresa Alberte-Hallam

Stephen F. Hallam

The publisher of this textbook has contracted with commercial software firms to make educational versions of WordPerfect 4.2 and dBASE III PLUS available, through instructors, to the students who use this textbook. Instructors who request this software will receive specific instructions on how to inform students of their rights and responsibilities under those license agreements.

In addition, the publisher is required to print the following notices in the Preface. The first notice duplicates the license agreement under which dBASE III PLUS is made available; the second lists in detail the nature of the limitations to the educational version of WordPerfect 4.2.

SOFTWARE LICENSING INFORMATION

dBASE III PLUS

Important: Please read this page before using the dBASE III Plus program, a copy of which is being made available to you for use in conjunction with this Textbook pursuant to the terms of this Agreement for educational, training and/or demonstration purposes. By using the dBASE III Plus program, you show your agreement to the terms of this license.

Exclusions of Warranties and Limitations of Liability

THE COPY OF THE dBASE III PLUS PROGRAM MADE AVAILABLE FOR USE WITH THIS TEXTBOOK IS A LIMITED FUNCTIONALITY VERSION OF dBASE III PLUS, AND IS INTENDED SOLELY FOR EDUCATIONAL, TRAINING AND DEMONSTRATION PURPOSES. ACCORDINGLY, THIS COPY OF dBASE III PLUS IS PROVIDED "AS IS," WITHOUT WARRANTY OF ANY KIND FROM ASHTON-TATE OR HARCOURT BRACE JOVANOVIICH, INC. ASHTON-TATE AND HARCOURT BRACE JOVANOVIICH, INC. HEREBY DISCLAIM ALL WARRANTIES OF ANY KIND WITH RESPECT TO THIS LIMITED FUNCTIONALITY COPY OF dBASE III PLUS, INCLUDING WITHOUT LIMITATION THE IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE. NEITHER ASHTON-TATE NOR HARCOURT BRACE JOVANOVIICH SHALL BE LIABLE UNDER ANY CIRCUMSTANCES FOR CONSEQUENTIAL, INCIDENTAL, SPECIAL OR EXEMPLARY DAMAGES ARISING OUT OF THE USE OF THIS LIMITED FUNCTIONALITY COPY OF dBASE III PLUS, EVEN IF ASHTON-TATE OR HARCOURT BRACE JOVANOVIICH HAS BEEN APPRISED OF THE LIKELIHOOD OF SUCH DAMAGES OCCURRING. IN NO EVENT WILL ASHTON-TATE'S OR HARCOURT BRACE JOVANOVIICH'S LIABILITY (WHETHER BASED ON AN ACTION OR CLAIM IN CONTRACT, TORT OR OTHERWISE) ARISING OUT OF THE USE OF THIS LIMITED FUNCTIONALITY COPY OF dBASE III PLUS EXCEED THE AMOUNT PAID FOR THIS TEXTBOOK.

Limited Use Software License Agreement

Definitions

The term "Software" as used in this agreement means the Limited Use version of dBASE III Plus which is made available for use in conjunction with this Textbook solely for educational, training and/or demonstration purposes. The term "Software Copies" means the actual copies of all or any portion of the Software, including back-ups, updates, merged or partial copies permitted hereunder.

Permitted Uses

You may:

- Load into RAM and use the Software on a single terminal or a single workstation of a computer (or its replacement).
- Install the Software onto a permanent storage device (a hard disk drive).
- Make and maintain up to three back-up copies provided they are used only for back-up purposes, and you keep possession of the back-ups. In addition, all the information appearing on the original disk labels (including copyright notice) must be copied onto the back-up labels.

This license gives you certain limited rights to use the Software and Software Copies for educational, training and/or demonstration purposes. You do not become the owner of and Ashton-Tate retains title to, all the Software and Software Copies. In addition, you agree to use reasonable efforts to protect the Software from unauthorized use, reproduction, distribution or publication.

All rights not specifically granted in this license are reserved by Ashton-Tate.

Uses Not Permitted

You may not:

- Make copies of the Software, except as permitted above.
- Rent, lease, sublicense, time-share, lend or transfer the Software, Software Copies or your rights under this license except that transfers may be made with Ashton-Tate's prior written authorization.
- Alter, decompile, disassemble, or reverse-engineer the Software.
- Remove or obscure the Ashton-Tate copyright and trademark notices.

- Use the Software or Software Copies outside the United States or Canada.

Duration

This agreement is effective from the day you first use the Software. Your license continues for fifty years or until you return to Ashton-Tate the original disks and any back-up copies, whichever comes first.

If you breach this agreement, Ashton-Tate can terminate this license upon notifying you in writing. You will be required to return all Software Copies. Ashton-Tate can also enforce our other legal rights.

General

This agreement represents the entire understanding and agreement regarding the Software and Software Copies and supersedes any prior purchase order, communication, advertising or representation.

This license may only be modified in a written amendment signed by an authorized Ashton-Tate officer. If any provision of this agreement shall be unlawful, void, or for any reason unenforceable, it shall be deemed severable from, and shall in no way affect the validity or enforceability of the remaining provisions of this agreement. This agreement will be governed by California law.

WORDPERFECT

The Limited-Use introductory version of WordPerfect 4.2 (L-WP) is intended to allow one to *learn* the features of WordPerfect 4.2; however, the L-WP is not intended to allow one to print usable academic or professional documents.¹

Certain limitations (*which should not deter learning WordPerfect through the L-WP*) have been encrypted into the L-WP to guard against productive use, and are as follows:

- I. One may work with as large a document on screen as desired, but one may only save to disk a data file no larger than 50,000k (appx. 25–30 regular pages).
 1. A data file created with the L-WP cannot be imported into regular WordPerfect, nor can a file created in regular WordPerfect be imported into L-WP.

¹“*WPC” will be automatically printed after each paragraph of text to discourage academic or professional use of the L-WP. See paragraph II on page x.

- II. Data files of any size may be printed through parallel printer port "1" without defining a printer, but font changes and extended ASCII characters are not allowed. Also, "***WPC**" will be printed after each paragraph.
- III. One will be able to learn all the functions of WordPerfect 4.2's speller and thesaurus by calling up the "readme.wp" file and following the step-by-step directions; however, one cannot use the L-WP speller and thesaurus with any of one's own documents because there are only a limited number of words in the L-WP speller and thesaurus. (The regular speller has 115,000 words, and the regular thesaurus has approximately 150,000 words.)
- IV. The help file of L-WP allows the user to retrieve the function-key template, but similar to the speller and the thesaurus described above, space will not allow the full help files on the L-WP disk.

L-WP is designed to be used for introductory, word processing courses, and thus far has been well received in these types of environments. Notwithstanding the broad abilities provided in the L-WP, presumably the L-WP will not satisfactorily substitute for regular WordPerfect 4.2, and therefore the full-feature version may be obtained directly from WordPerfect Corporation at a 75% educational discount.
