Foreword

ETAPS 2005 was the eighth instance of the European Joint Conferences on Theory and Practice of Software. ETAPS is an annual federated conference that was established in 1998 by combining a number of existing and new conferences. This year it comprised five conferences (CC, ESOP, FASE, FOSSACS, TACAS), 17 satellite workshops (AVIS, BYTECODE, CEES, CLASE, CMSB, COCV, FAC, FESCA, FINCO, GCW-DSE, GLPL, LDTA, QAPL, SC, SLAP, TGC, UITP), seven invited lectures (not including those that were specific to the satellite events), and several tutorials. We received over 550 submissions to the five conferences this year, giving acceptance rates below 30% for each one. Congratulations to all the authors who made it to the final program! I hope that most of the other authors still found a way of participating in this exciting event and I hope you will continue submitting.

The events that comprise ETAPS address various aspects of the system development process, including specification, design, implementation, analysis and improvement. The languages, methodologies and tools which support these activities are all well within its scope. Different blends of theory and practice are represented, with an inclination towards theory with a practical motivation on the one hand and soundly based practice on the other. Many of the issues involved in software design apply to systems in general, including hardware systems, and the emphasis on software is not intended to be exclusive.

ETAPS is a loose confederation in which each event retains its own identity, with a separate program committee and proceedings. Its format is open-ended, allowing it to grow and evolve as time goes by. Contributed talks and system demonstrations are in synchronized parallel sessions, with invited lectures in plenary sessions. Two of the invited lectures are reserved for “unifying” talks on topics of interest to the whole range of ETAPS attendees. The aim of cramming all this activity into a single one-week meeting is to create a strong magnet for academic and industrial researchers working on topics within its scope, giving them the opportunity to learn about research in related areas, and thereby to foster new and existing links between work in areas that were formerly addressed in separate meetings.

ETAPS 2005 was organized by the School of Informatics of the University of Edinburgh, in cooperation with

- European Association for Theoretical Computer Science (EATCS);
- European Association for Programming Languages and Systems (EAPLS);
- European Association of Software Science and Technology (EASST).

The organizing team comprised:

- Chair: Don Sannella
- Publicity: David Aspinall
- Satellite Events: Massimo Felici

- Secretariat: Dyane Goodchild
- Local Arrangements: Monika-Jeannette Lekuse
- Tutorials: Alberto Momigliano
- Finances: Ian Stark
- Website: Jennifer Tenzer, Daniel Winterstein
- Fundraising: Phil Wadler

ETAPS 2005 received support from the University of Edinburgh.

Overall planning for ETAPS conferences is the responsibility of its Steering Committee, whose current membership is:

Perdita Stevens (Edinburgh, Chair), Luca Aceto (Aalborg and Reykjavík), Rastislav Bodik (Berkeley), Maura Cerioli (Genoa), Evelyn Duesterwald (IBM, USA), Hartmut Ehrig (Berlin), José Fiadeiro (Leicester), Marie-Claude Gaudel (Paris), Roberto Gorrieri (Bologna), Reiko Heckel (Paderborn), Holger Hermanns (Saarbrücken), Joost-Pieter Katoen (Aachen), Paul Klint (Amsterdam), Jens Knoop (Vienna), Kim Larsen (Aalborg), Tiziana Margaria (Dortmund), Ugo Montanari (Pisa), Hanne Riis Nielson (Copenhagen), Fernando Orejas (Barcelona), Mooly Sagiv (Tel Aviv), Don Sannella (Edinburgh), Vladimiro Sassone (Sussex), Peter Sestoft (Copenhagen), Michel Wermelinger (Lisbon), Igor Walukiewicz (Bordeaux), Andreas Zeller (Saarbrücken), Lenore Zuck (Chicago).

I would like to express my sincere gratitude to all of these people and organizations, the program committee chairs and PC members of the ETAPS conferences, the organizers of the satellite events, the speakers themselves, the many reviewers, and Springer for agreeing to publish the ETAPS proceedings. Finally, I would like to thank the organizer of ETAPS 2005, Don Sannella. He has been instrumental in the development of ETAPS since its beginning; it is quite beyond the limits of what might be expected that, in addition to all the work he has done as the original ETAPS Steering Committee Chairman and current ETAPS Treasurer, he has been prepared to take on the task of organizing this instance of ETAPS. It gives me particular pleasure to thank him for organizing ETAPS in this wonderful city of Edinburgh in this my first year as ETAPS Steering Committee Chair.

Edinburgh, January 2005

Perdita Stevens
ETAPS Steering Committee Chair

Preface

This volume contains the proceedings of the 11th TACAS, International Conference on *Tools and Algorithms for the Construction and Analysis of Systems*. TACAS 2005 took place in Edinburgh, UK, April 4–8, 2005. TACAS is a forum for researchers, developers, and users interested in rigorously based tools for the construction and analysis of systems. The conference serves to bridge the gaps among communities that are devoted to formal methods, software and hardware verification, static analysis, programming languages, software engineering, real-time systems, and communication protocols. By providing a venue for the discussion of common problems, heuristics, algorithms, data structures, and methodologies, TACAS aims to support researchers in their quest to improve the utility, reliability, flexibility, and efficiency of tools for building systems.

Topics covered by TACAS include specification and verification techniques for finite and infinite state systems, software and hardware verification, theorem-proving and model-checking, system construction and transformation techniques, static and run-time analysis, abstract interpretation, compositional and refinement-based methodologies, testing and test-case generation, analytical techniques for security protocols, real-time, hybrid, and safety-critical systems, integration of formal methods and static analysis in high-level hardware design, tool environments and tool architectures, and applications and case studies.

Two types of papers are traditionally considered: full-length research papers, including those describing tools, and short tool-demonstration papers that give an overview of a particular tool and its applications. TACAS 2005 received 141 research and 20 tool demonstration submissions, and accepted 33 research papers and 8 tool demonstration papers. We'd like to thank the authors of all submitted papers.

To carry out the difficult task of selecting a program from the large number of submissions in a fair and competent manner, we were fortunate to have highly qualified Program Committee members from diverse geographic and research areas. Each submission was evaluated by at least three reviewers. After a four-week reviewing process, the program selection was carried out in a two-week electronic Program Committee meeting. We believe that the result of the committee deliberations is a very strong scientific program. As this year's invited speaker, the Program Committee selected Ken McMillan, who presented work on applications of Craig interpolation.

Special thanks are due to the Program Committee members and all the referees for their assistance in selecting the papers, and to Andreas Kuehlmann for his diligent work as a tool chair. The help of the TACAS Steering Committee, especially of Bernhard Steffen, was invaluable. Martin Karusseit gave us prompt support in dealing with the online conference management service.

TACAS 2005 was part of the 8th European Joint Conference on Theory and Practice of Software (ETAPS), whose aims, organization, and history are detailed in the separate foreword by the ETAPS Steering Committee Chair, Perdita Stevens. In the years since it joined the ETAPS conference federation, TACAS has been the largest of the ETAPS member conferences in terms of number of submissions and papers accepted.

We would like to express our appreciation to the ETAPS Steering Committee and especially to Don Sannella and the wonderful Organizing Committee, for their efforts in making ETAPS 2005 such a successful event.

We hope to see you all in Vienna in 2006!

April 2005

Table of Contents

Invited Paper

Applications of Craig Interpolants in Model Checking <i>Ken L. McMillan</i>	1
--	---

Regular Model-Checking

Verifying Programs with Dynamic 1-Selector-Linked Structures in Regular Model Checking <i>Ahmed Bouajjani, Peter Habermehl, Pierre Moro, Tomáš Vojnar</i>	13
Simulation-Based Iteration of Tree Transducers <i>Parosh Aziz Abdulla, Arel Legay, Julien d'Orso, Ahmed Rezine</i>	30
Using Language Inference to Verify Omega-Regular Properties <i>Abhay Vardhan, Koushik Sen, Mahesh Viswanathan, Gul Agha</i>	45

Infinite State Systems

On-the-Fly Reachability and Cycle Detection for Recursive State Machines <i>Rajeev Alur, Swarat Chaudhuri, Kousha Etessami, P. Madhusudan</i> ..	61
Empirically Efficient Verification for a Class of Infinite-State Systems <i>Jesse Bingham, Alan J. Hu</i>	77
Context-Bounded Model Checking of Concurrent Software <i>Shaz Qadeer, Jakob Rehof</i>	93
A Generic Theorem Prover of CSP Refinement <i>Yoshinao Isobe, Markus Roggenbach</i>	108

Abstract Interpretation

Separating Fairness and Well-Foundedness for the Analysis of Fair Discrete Systems <i>Amir Pnueli, Andreas Podelski, Andrey Rybalchenko</i>	124
---	-----

An Abstract Interpretation-Based Refinement Algorithm for Strong Preservation	
<i>Francesco Ranzato, Francesco Tapparo</i>	140

Dependent Types for Program Understanding	
<i>Raghavan Komondoor, G. Ramalingam, Satish Chandra, John Field</i>	157

Automata and Logics

A Note on On-the-Fly Verification Algorithms	
<i>Stefan Schwoon, Javier Esparza</i>	174

Truly On-the-Fly LTL Model Checking	
<i>Moritz Hammer, Alexander Knapp, Stephan Merz</i>	191

Complementation Constructions for Nondeterministic Automata on Infinite Words	
<i>Orna Kupferman, Moshe Y. Vardi</i>	206

Using BDDs to Decide CTL	
<i>Will Marrero</i>	222

Probabilistic Systems, Probabilistic Model-Checking

Model-Checking Infinite-State Markov Chains	
<i>Anne Remke, Boudewijn R. Haverkort, Lucia Cloth</i>	237

Algorithmic Verification of Recursive Probabilistic State Machines	
<i>Kousha Etessami, Mihalis Yannakakis</i>	253

Monte Carlo Model Checking	
<i>Radu Grosu, Scott A. Smolka</i>	271

Satisfiability

Efficient Conflict Analysis for Finding All Satisfying Assignments of a Boolean Circuit	
<i>HoonSang Jin, HyoJung Han, Fabio Somenzi</i>	287

Bounded Validity Checking of Interval Duration Logic	
<i>Babita Sharma, Paritosh K. Pandya, Supratik Chakraborty</i>	301

An Incremental and Layered Procedure for the Satisfiability of Linear Arithmetic Logic

*Marco Bozzano, Roberto Bruttomesso, Alessandro Cimatti,
Tommi Junttila, Peter van Rossum, Stephan Schulz,
Roberto Sebastiani* 317

A Two-Tier Technique for Supporting Quantifiers in a Lazily Proof-Explicating Theorem Prover

K. Rustan M. Leino, Madan Musuvathi, Xinming Ou 334

Testing

Symbolic Test Selection Based on Approximate Analysis

*Bertrand Jeannet, Thierry Jéron, Vlad Rusu,
Elena Zinovieva* 349

Symstra: A Framework for Generating Object-Oriented Unit Tests Using Symbolic Execution

*Tao Xie, Darko Marinov, Wolfram Schulte,
David Notkin* 365

Abstraction and Reduction

Dynamic Symmetry Reduction

E. Allen Emerson, Thomas Wahl 382

Localization and Register Sharing for Predicate Abstraction

*Himanshu Jain, Franjo Ivančić, Aarti Gupta,
Malay K. Ganai* 397

On Some Transformation Invariants Under Retiming and Resynthesis

Jie-Hong R. Jiang 413

Specification, Program Synthesis

Compositional Message Sequence Charts (CMSCs) Are Better to Implement Than MSCs

Blaise Genest 429

Temporal Logic for Scenario-Based Specifications

*Hillel Kugler, David Harel, Amir Pnueli, Yuan Lu,
Yves Bontemps* 445

Mining Temporal Specifications for Error Detection
Westley Weimer, George C. Necula 461

A New Algorithm for Strategy Synthesis in LTL Games
Aidan Harding, Mark Ryan, Pierre-Yves Schobbens 477

Model-Checking

Shortest Counterexamples for Symbolic Model Checking of LTL with
Past
Viktor Schuppan, Armin Biere 493

Snapshot Verification
*Blaise Genest, Dietrich Kuske, Anca Muscholl,
Doron Peled* 510

Time-Efficient Model Checking with Magnetic Disk
Tonglaga Bao, Michael Jones 526

Tool Presentations

jMoped: A Java Bytecode Checker Based on Moped
Dejvuth Suwimonteerabuth, Stefan Schwoon, Javier Esparza 541

Java-MOP: A Monitoring Oriented Programming Environment for Java
Feng Chen, Grigore Roşu 546

JML-Testing-Tools: A Symbolic Animator for JML Specifications Using
CLP
*Fabrice Bouquet, Frédéric Dadeau, Bruno Legeard,
Mark Utting* 551

jETI: A Tool for Remote Tool Integration
Tiziana Margaria, Ralf Nagel, Bernhard Steffen 557

FocusCheck: A Tool for Model Checking and Debugging Sequential C
Programs
*Curtis W. Keller, Diptikalyan Saha, Samik Basu,
Scott A. Smolka* 563

SATABS: SAT-Based Predicate Abstraction for ANSI-C
*Edmund Clarke, Daniel Kroening, Natasha Sharygina,
Karen Yorav* 570
