## ABOUT THE AUTHOR

Regis J. (Bud) Bates Jr.  
President  
TC International Consulting, Inc.  
PO Box 51108  
Phoenix, AZ 85076-1108  
Tel. (800) 322-2202  
Fax (800) 260-6440  
<http://www.tcic.com>

Mr. Bates has more than 36 years of experience in telecommunications and information systems. He oversees the overall operation of TC International Consulting, Inc. (TCIC) of Phoenix, Arizona. TCIC is a full-service management consulting organization that specializes in designing and integrating information technologies. TC International Consulting leads the pack in strategic development and implementation of new technologies for carriers and corporations alike.

Bud's experience served in major network designs from Local Area Networks (LANs) to Wide Area Networks (WANs) using high-quality, all-digital transmission services: T1, T3, and SONET/SDH. His studies and recommendations resulted in significant financial savings. One project included the design and implementation of a Frame Relay network that spanned over 14 countries and 80 locations. This project resulted in huge monthly savings while preserving subsecond response times across the network.

His articles have been published in *Network World*, *Information Week*, *International Journal of Information Management*, and others. He has authored numerous books published by McGraw-Hill and Artech House. His recent published books *Voice and Data Communications, Fourth Edition*, *GPRS*, and *Optical Switching and Networking* continue to fall on McGraw-Hill's best-seller list. Bud also develops and conducts various public seminars throughout the world, ranging from a managerial overview to very technical instruction on voice, data, and LAN communications. He spends much of his time working with the major telecommunications manufacturers in training their staff members on the innovations of technology and the convergence of voice and data networks for the future. Many of his materials are used throughout the higher education institutions in certification and graduate-level classes in telecommunications management.

## About the Author

Mr. Bates holds a degree in Business Management from Stonehill College, Easton, MA. He has completed graduate-level courses at Lehigh University and Saint Joseph's University, specifically in Financial Management and Advanced Mathematics.

## ACKNOWLEDGMENTS

I would like to take the opportunity to recognize several people who had a considerable influence on my ability to complete this project. One cannot produce a book or write a manuscript in a vacuum. Therefore, without the people who aided me, this book might not exist.

First, I have to readily acknowledge and thank all the folks at McGraw-Hill for their continued support of this author and their exceptional patience. This holds especially true for my Senior Editor Steve Chapman. Steve has become a friend and editor all rolled up in one. He knows when to push and when to back off when following up on a manuscript. Somewhere is an unwritten rule that an author is supposed to have unlimited time available and unmitigated commitment to completing the book early. Well, in my case, it is not true! Too many challenges and changes crept into our lives and postponed the inevitable completion of this project. As the radical changes and slowdowns in the industry cause major changes in the providers, the protocols, and the acceptance of any specific product, we had to juggle all the schedules to try to get to a completion of this second edition. I put the McGraw-Hill people through the paces, promising to get the manuscript to them and missing just about every date.

I thank Steve Chapman for his patience and his periodic prods to remind me to stick with it. I also appreciate the efforts of all the folks I never saw or talked with who remain in the background. These unsung heroes of the production department never get their credit, but we all should be grateful to them for their dedication and stick-to-it attitudes.

Beyond the folks at McGraw-Hill, there is a special person who has held the entire project together many times now. Her ability to keep after me to complete the project without creating a lot of friction was outstanding. Gabriele Bates has been the anchor in all these books, keeping track of what is done, what is in motion, and what needs attention. Her dedication to the overall success of my books never gets the credit she truly deserves. Gabriele provides the gentle push I need from time to time, keeping me focused and working at it. Even when she knows I am behind, there is no panic—just constant reinforcement and encouragement.

Several vendors and friends were supportive and helpful in garnering information for the development of this manuscript. I thank all of them, who are too numerous to mention each of them individually. However, they know who they are and can take silent comfort in knowing they got us here.

This book is also dedicated to you who buy the books we develop for your understanding. It is you, the reader of this material, who should also be praised for the demand for more information. In many cases, the ideas of broadband communications are still emerging for some of the areas discussed herein. However, we hope we were able to capture the spirit and the letter of the concept even before it truly develops. Enjoy this book as you would a version of a 201 series after the *Voice and Data Communications Handbook, Fourth Edition*. Convergence is the name of our industry today, yet we must continue to seek new ways of providing the information and using the technology. As long as you, the reader, continue to demand high-speed services, reliability, and mobility, I will have a job. That job will be to seek the ways of describing and applying the technologies so that you can use them.

I personally appreciate talking with readers who have bought a book and call (or e-mail) me with a question. As long as I can continue to get your feedback, I will continue to try to explain things in a way that hopefully makes sense. I thoroughly enjoy it when a reader calls (or e-mails) to tell me that he or she understood the materials better having read the book. Moreover, I hope that I can continue to offer one-on-one explanations to those of you who have a difficult time understanding a point I make in this book. Once again, I appreciate your support!

Good luck and happy reading!

# CONTENTS

<b>Chapter 1</b>	Introduction to Telecommunications Concepts	1
	Basic Telecommunications Systems	4
	Components of the Telecommunications Networks	5
	Communications Network Architectures	6
	The Local Loop	7
	The Movement Toward Fiberoptic Networks	8
	Digital Transfer Systems	10
	The Intelligent Networks of Tomorrow	12
	Summary	12
<b>Chapter 2</b>	Telecommunications Systems	15
	What Constitutes a Telecommunications System	16
	A Topology of Connections Is Used	18
	The Local Loop	20
	The Telecommunications Network	20
	The Network Hierarchy (Post-1984)	21
	The Public-Switched Network	21
	The North American Numbering Plan	22
	Private Networks	22
	Hybrid Networks	23
	Hooking Things Up	23
	Equipment	23
<b>Chapter 3</b>	Virtual Private Networks	25
	History	26
	Intelligent PBX Solution	29
	Virtual Private Networks (VPNs)	29
	Users May Not Like It	32
<b>Chapter 4</b>	Data Virtual Private Networks (VPNs)	35
	Internet-Based VPN	36
	Goals	37
	Shared Networks	38
	Internet	38
	Performance	39

	Outsourcing	39
	Security	40
	Creating the VPN	43
	Encryption	44
	Key Handling	44
	Public Key Cryptography (RSA)	45
	Authentication	46
	Router-Based VPN	51
	Firewall-Based VPN	52
	VPN-Specific Boxes	52
	Throughput Comparison	54
	Remote Management of VPN Components	54
	Cost Considerations	55
	Proprietary Protocols	55
	VoIP VPN	56
	Summary	56
<b>Chapter 5</b>	<b>Advanced Intelligent Networks (AINs)</b>	<b>57</b>
	Intelligent Networks (INs)	58
	Advanced Intelligent Networks (AINs)	59
	Information Network Architecture	61
	Combining AIN and CTI Services	61
	The Intelligent Peripheral (IP)	63
	IP Services	64
	Software Architecture: Client, Router, Server	65
	The Application	66
	Results of AIN	67
	Focus	68
<b>Chapter 6</b>	<b>Local Number Portability (LNP)</b>	<b>71</b>
	Three Flavors of LNP	72
	The Road to True LNP	73
	Basic LNP Networks	75
	The Terminology	77
	Before LNP	78
	Number Administration and Call Routing in the Network	79
	LRN	79
	Using a Database Solution	81
	Triggering Mechanisms	82
	How Is a Telephone Number Ported?	84

Other Issues	86
Switching Systems	86
Billing, Administration, and Maintenance Systems	87
Signaling	87
Operator Services	87
911 Services	88
Simplifying the Wireless E-911 Call	89
<b>Chapter 7</b> Computer Telephony Integration (CTI)	93
The Computer World	96
Other Possibilities	99
Why All the Hype?	101
Linking Computers and Communications	103
The Technology Advancement	106
The Final Bond	106
<b>Chapter 8</b> Signaling System 7 (SS7)	111
Presignaling System 7	112
Introduction to SS7	114
Purpose of the SS7 Network	115
What Is Out-of-Band Signaling?	115
Why Out-of-Band Signaling?	117
The SS7 Network Architecture	117
SS7 Interconnection	119
Basic Functions of the SS7 Network	119
Signaling Links	120
The Link Architecture	122
Links and Linksets	124
Combined Linksets	124
Routes and Routesets	125
SS7 Protocol Stack	126
Basic Call Setup with ISUP	128
SS7 Applications	130
SS7 and IP	131
SCTP	132
VoIP Impacts	134
Overview of SIP Functionality	134
VoIP Telephony Signaling	137
SS7 and Wireless Intelligent Networks	138
GSM Network Connection to SS7 Networks	139
The Signaling Protocol Stack for GSM	140

<b>Chapter 9</b>	<b>CTI Technologies and Applications</b>	<b>143</b>
	Understanding Computer Telephony Technologies	144
	Voice Processing	144
	Telephone Network Interfaces	145
	Tone Processing	145
	Facsimile (Fax)	146
	Automatic Speech Recognition (ASR)	146
	Text-to-Speech (TTS)	146
	Switching	146
	Understanding Computer Telephony Solutions	147
	Information Access and Processing Applications	147
	AudioText	147
	Voice Recording for Transaction Logging	147
	Technology Enhancements	149
	Other Technologies	151
	Automated Attendant	152
	Integrated Voice Recognition and Response (IVR)	152
	Fax-Back and Fax Processing	153
	Fax-on-Demand (FOD)	153
	Interactive Fax Response (IFR)	154
	E-mail Reader	154
	Text-to-Speech and Speech-to-Text	154
	Optical Character Recognition (OCR)	155
	Summary	155
<b>Chapter 10</b>	<b>Integrated Services Digital Network (ISDN)</b>	<b>157</b>
	Origins of ISDN	159
	Origins of the Standards	159
	Interfaces	160
	Interface Components	164
	NT1	164
	NT2	165
	TE1	165
	TE2	165
	TA	165
	Physical Delivery	166
	The U Interface	168
	The Physical Interface	170
	Applications of the ISDN Interface	171

H11 Channels	174
H12 Channels	175
Signaling on the D Channel	175
Installation Problems	176
BRI Application	177
Broadband ISDN	178
Definitions	179
Conclusion	181
<b>Chapter 11</b> Frame Relay	183
Frame Relay Defined	185
What Can Frame Relay Bring to the Table?	186
Where People Use Frame Relay	187
The Frame	189
The OSI Protocol Stack and Frame Relay	191
Frame Relay Speeds	195
Frame Relay Access	196
Overall Frame Relay Core Protocols	196
Carriers' Implementation of IP-Enabled Frame Relay	198
Frame Relay Versus IP	199
Voice over Frame Relay (VoFR)	200
Compressing the Information on VoFR	202
Provisioning PVCs and SVCs	203
Benefits of SVCs	204
Frame Relay Selected for Wireless Data on GPRS	205
<b>Chapter 12</b> Asynchronous Transfer Mode (ATM)	207
What Is ATM?	208
Why the Interest in ATM?	210
ATM Protocols	212
Mapping Circuits Through an ATM Network	214
The ATM Layered Architecture	216
ATM Traffic Management	219

Contention Management	220
The Double Leaky Bucket	222
Categories of Service	224
Getting to the Elusive QoS	226
Shaping the Traffic	227
Normal Bandwidth Allocation	228
What Is MPOA?	228
LANE	229
Voice over DSL and over ATM (VoDSL and VoATM)	232
ATM Suitability for Voice Traffic	234
Integrated Access at the Local Loop	235
<b>Chapter 13</b> ATM and Frame Relay Internetworking	237
ATM and Frame Relay Compared	239
Frame Relay Revisited	240
ATM Revisited	241
The Frame and ATM Merger	242
Transparency Across the Network	243
Frame User-to-Network Interface (FUNI)	244
Data Exchange Interface (DXI)	245
What Constitutes a Frame?	248
FUNI Interoperability	250
Network Interworking	250
Service Interworking Functions	252
The DXI Interface	253
DXI Mode 1 A/B	254
DXI Protocol Mode 1A	254
DXI Protocol Mode 1B	255
DXI Mode 2	256
DXI Protocol Mode 2	257
Summary	259
<b>Chapter 14</b> Cable TV Systems	261
Cable Television Transmission	264
The Cable Infrastructure	265
The Cable Television Distribution System	267
Signal Level	268
Digital Video on Cable TV Systems	269
Forming a Digital Video Signal	271
Key Features of Digital Modulation	271
DTV Solution Introduction	272

<b>Chapter 15</b>	Cable Modem Systems and Technology	277
	Cable TV Technology	280
	The New Market	282
	System Upgrades	282
