PREFACE

The principles of biology can be learned using as a model the frog, dogfish, daisy, fern or even the colon bacillus. However, most students have a special interest in human biology—in the structure, function and development of the human body—generated perhaps by their plans for a career in medicine, dentistry, or another of the health sciences, or simply by a narcissistic interest in how their own body is put together and how it works. The earlier editions of this text have emphasized the human aspects of biology and the biology of human beings; this edition extends and strengthens that emphasis. Like the earlier ones, this edition is neither encyclopedic nor cursory but attempts to present the concepts of biology and their relevance to human beings in an interesting and understandable fashion.

The changes in the seventh edition reflect the continuing rapid development of the biological sciences. Our understanding of the events of life at the molecular, cellular, organismal and population levels of biological organization has been increasing quickly. Remarkable advances have been made in recent years in our understanding of many aspects of biological sciences. However, to be understood and fully appreciated, these newer discoveries must be viewed against the background of the more classical aspects of biology. These advances not only have reemphasized the basic unity of life but also have demonstrated the fundamental similarity of life processes that occur in all organisms.

The discussions of cell structure and organelles, cell cycle, intermediary metabolism, molecular function, protein synthesis, bioenergetics, endocrinology, immunology, and immunogenetics have been completely revised. The chapters dealing specifically with plant biology have been completely rewritten. I am especially indebted to Dr. Knut Norstog, who read the manuscript of these chapters, made many helpful suggestions for their improvement and permitted me to borrow several illustrations from his and the late Dr. Robert Long's *Plant Biology*. The chapter on human evolution was reviewed by Dr. Michael Charney and rewritten in the light of his helpful suggestions. Many illustrations have been replaced and new ones added. The new line drawings for this edition were made by John Hackmaster, Celeste Brennan, Linda Downham, and Susan O'Neill. The appendices contain a discussion of some of the basic physical and chemical principles on which modern biology is founded and a taxonomic summary of the many kinds of living organisms arranged according to the Five Kingdom System proposed by R. H. Whittaker.

A course in general biology attempts to provide the student with an understanding and appreciation of the vast diversity of living things, their special adaptations to their environment, and their evolutionary and ecologic relationships. It should also emphasize the basic unity of

life and the fundamental similarities of the problems that have been faced and solved by all living things. However, there has never been general agreement among biologists as to the sequence in which the several topics in a general biology course should be taught. This is understandable, for reasonable arguments can be advanced for each of the many possible combinations and permutations. The various aspects of biology are intimately related and each could be grasped much more readily if all the other aspects had been learned previously. Since this cannot be done (except perhaps by a student repeating the course!), each instructor must choose the sequence that seems optimal to him. The various parts and chapters in this text can be taken up in any of a number of sequences.

An appreciation of science requires not only a grasp of the product of science but also an insight into the processes by which scientific knowledge is acquired. An introduction to the methods of science is given in Chapter 1, and throughout the text examples of experimental work are presented to illustrate modern methods in biology. The second introductory chapter presents the major generalizations of modern biology. Part 1 discusses the molecular and cellular basis of biology, the architecture of cells and tissues, and the properties and constituents of enzyme systems, ending with a description of the grand metabolic design by which living systems obtain and utilize free energy by photosynthesis and oxidative phosphorylation.

Part 2, concerned with single-celled organisms and plants, opens with a discussion of biological interrelationships, the cyclic use of matter and the interactions among species of plants and animals. It continues with a consideration of prokaryotes, viruses, protists and fungi. The special characteristics of each division of algae and fungi are described, together with their life cycles and economic importance to humans. Chapter 9 presents the primitive land plants and discusses the evolution of mosses and ferns. The gymnosperms and angiosperms are described in Chapter 10. These, the largest in size and in number of types, are of special importance to human life as sources of food, flowers, scents, seasonings and lumber. A discussion of the general physiologic and morphologic attributes of green plants, including plant hormones, follows, and Part 2 ends with a description of plant development and the functions of roots, soil, stems and leaves. A similar survey of the invertebrate and vertebrate animals living today and their structural and functional adaptations is presented in Part 3. The organ systems of the frog are described in some detail, since this animal is frequently used to demonstrate vertebrate characteristics.

In Part 4 the structure and functions of organ systems of the human body are presented and compared with those of other vertebrates. Part 5 is concerned with the biological basis of behavior, and in these chapters the essential features of the human nervous system are described and compared with the nervous systems of other organisms. The section continues with descriptions of receptors and effectors and ends with a chapter on integration by endocrines and their role in determining behavior.

Part 6 deals with reproductive and developmental biology. The subject is presented primarily from the viewpoint of human reproduction and development, but these are compared with similar processes in other vertebrates. Part 7 deals with heredity and evolution, beginning with the physical basis of inheritance and the principles of classic transmission genetics. A greatly revised and rewritten discussion of the

genetic code and the transfer of biological information in DNA molecules from generation to generation is given in Chapter 29. The principles of population genetics and differential reproduction and the basis for our present concepts of the mechanisms of evolution are detailed in Chapter 30. This is followed by a description of the principles of evolution, the evidence for evolutionary changes, and some theories regarding the mechanisms of evolution and the role of differential reproduction as a driving force in evolution. It ends with a discussion of the possible mechanisms of the origin of life itself on this planet.

The evolutionary and ecologic relationships of living organisms are the two major unifying threads running through the text. Part 8 presents a discussion of the principles of ecology; those aspects concerned primarily with the ecologic relationships of individuals are considered in Chapter 34, and those concerned with populations and communities and their characteristics are described in Chapter 35, which also includes a discussion of adaptations, ecosystems and the various types of biomes found on land, in the sea, and in fresh water lakes. The final chapter on human ecology considers some of our present predicaments involving overpopulation, pollution, and the depletion of our natural resources.

A glossary giving the derivations and definitions of some important biological terms is also included. The student will find further definitions of biological terms in an unabridged dictionary. Special biological dictionaries have been published; an excellent and inexpensive one is *A Dictionary of Biology* by Abercrombie, Hickman and Johnson, published by Penguin Books.

The questions at the end of each chapter are designed to assist the student in reviewing the material presented and in testing his comprehension of the principles and facts discussed. Suggestions for further reading are given at the end of each chapter. Complete citations for these references will be found in the bibliography in the appendix.

I am greatly indebted to the many instructors who have made suggestions for revisions based upon their experience in using previous editions of the text. My special thanks are due to Edwin M. Banks, Arthur C. Borror, John Bauman, William H. Behle, Jeffrey M. Camhi, Herbert M. Clarke, Carl Hammen, Donald O. Hebb, Joseph Hichar, Bartholemew Kunny, Ralph W. Lewis, Irving McNulty, Fred R. Rickson, James Slater, Elizabeth Souter, Shirley Sparling, and Richard T. Wilfong.

I want to express my thanks to the artists, Julia Child, Margaret Croup, Frank Fancher, John Hackmaster, Betsy Holbert, Paul Larkin, Grant Lashbrook, Muriel McLatchy and William Osburn, who transformed my rough sketches into finished line drawings. I am indebted to many scientists, museums and publishers who have furnished me with original photographs to use as illustrations; each of these is acknowledged individually in the legend to the photograph. I am especially grateful to Mr. Richard Lampert and the editorial staff of the W. B. Saunders Company for their many helpful suggestions for revisions. My thanks are also due to Kathleen Callinan, Janet Loring and Suzanne Villee for their assistance in reading proof and preparing the index. Finally, I want to express my deep appreciation to my wife, Dorothy, who, despite the demands of a busy career in medicine, found time to help me in many ways in the preparation of this volume.

| 20-8 | Antimetabolites..... | 446 |
| 20-9 | Diet..... | 446 |
| | <i>Questions</i> | 447 |
| | <i>Supplementary Reading</i> | 447 |

| | | |
|------------------------------------|---|------------|
| Chapter 21 | HOMEOSTASIS AND EXCRETION | 448 |
| 21-1 | The Kidney and Its Ducts | 449 |
| 21-2 | The Formation of Urine..... | 450 |
| 21-3 | The Regulation of Glomerular Filtration Rate | 453 |
| 21-4 | Renal Thresholds and Renal Clearances | 454 |
| 21-5 | How the Kidney Excretes a Concentrated Urine: The Counter-Current Model | 455 |
| 21-6 | Osmoreceptors | 456 |
| 21-7 | Keeping the pH Constant | 457 |
| 21-8 | Regulating the Volumes of Body Fluids..... | 457 |
| 21-9 | Kidney Disease and the Artificial Kidney | 458 |
| 21-10 | Excretory Devices in Other Animals | 459 |
| <i>Questions</i> | <i>Supplementary Reading</i> | <i>463</i> |
| <i>Supplementary Reading</i> | | <i>463</i> |
| Chapter 22 | SKIN, BONES AND MUSCLES: PROTECTION AND LOCOMOTION..... | 464 |
| 22-1 | The Skin | 465 |
| 22-2 | The Skeleton | 466 |
| 22-3 | Types of Locomotion | 469 |
| 22-4 | Skeletal Muscles | 470 |
| 22-5 | The Physiology of Muscle Activity | 473 |
| 22-6 | The Biochemistry of Muscular Contraction | 475 |
| 22-7 | The Biophysics of Muscle Contraction | 477 |
| 22-8 | Cardiac and Smooth Muscle | 480 |
| 22-9 | The Muscles of Lower Animals | 480 |
| <i>Questions</i> | <i>Supplementary Reading</i> | <i>481</i> |
| <i>Supplementary Reading</i> | | <i>481</i> |
| Part 5 | THE BIOLOGICAL BASIS OF BEHAVIOR | |
| Chapter 23 | CONTROL SYSTEMS: NEURAL INTEGRATION..... | 484 |
| 23-1 | Neurons | 484 |
| 23-2 | Synapses | 488 |
| 23-3 | Action Potentials | 489 |
| 23-4 | The Membrane Theory of Nerve Conduction | 492 |
| 23-5 | Synaptic Transmission | 495 |
| 23-6 | Synaptic Resistance | 498 |
| 23-7 | The Central Nervous System: Spinal Cord | 498 |
| 23-8 | The Central Nervous System: The Brain | 499 |
| 23-9 | Brain Waves | 503 |
| 23-10 | Sleep | 503 |
| 23-11 | Neuroses and Psychoses | 504 |
| 23-12 | The Peripheral Nervous System | 505 |
| 23-13 | Reflexes and Reflex Arcs | 506 |
| 23-14 | Reflexes and Behavior | 507 |
| 23-15 | Learning | 509 |
| 23-16 | The Autonomic Nervous System | 516 |
| 23-17 | The Nervous Systems of Lower Animals | 518 |
| <i>Questions</i> | <i>Supplementary Reading</i> | <i>519</i> |
| <i>Supplementary Reading</i> | | <i>519</i> |
| Chapter 24 | RECEPTORS AND EFFECTORS | 521 |
| 24-1 | The Functions of Sense Organs | 521 |
| 24-2 | The Stimulus—Receiving Process | 522 |
| 24-3 | Sensory Coding and Sensation | 524 |

| | | |
|-------|--|-----|
| 24-4 | Mechanoreceptors | 526 |
| 24-5 | Chemoreception: Taste and Smell..... | 529 |
| 24-6 | The Human Sense of Taste | 530 |
| 24-7 | The Sense of Taste in Insects..... | 531 |
| 24-8 | The Sense of Smell (Olfaction)..... | 531 |
| 24-9 | Vision..... | 532 |
| 24-10 | The Human Eye | 533 |
| 24-11 | The Chemistry of Vision..... | 536 |
| 24-12 | Color Vision | 537 |
| 24-13 | Defects in Vision | 538 |
| 24-14 | Binocular Vision and Depth Perception..... | 538 |
| 24-15 | The Compound Eye | 539 |
| 24-16 | The Ear | 540 |
| 24-17 | Equilibrium | 543 |
| 24-18 | Equilibrium in Flies: Halteres | 545 |
| | Questions | 545 |
| | Supplementary Reading | 545 |

Chapter 25

| | | |
|-------|---|-----|
| | CONTROL SYSTEMS: HORMONAL INTEGRATION | 546 |
| 25-1 | Endocrine Glands | 546 |
| 25-2 | What Is a Hormone?..... | 547 |
| 25-3 | The Endocrine Glands of Humans..... | 554 |
| 25-4 | Target Cells | 560 |
| 25-5 | Endocrine Abnormalities | 560 |
| 25-6 | Endocrines as Simple Transmitters of Information..... | 565 |
| 25-7 | Endocrines as Limit Controls | 565 |
| 25-8 | Endocrines as Reciprocal or Negative Feedback Controls..... | 566 |
| 25-9 | Complex Control Systems: Regulation of the Estrous and Menstrual Cycles | 568 |
| 25-10 | Complex Control Systems: Regulating the Development and Function of the Mammary Gland | 574 |
| 25-11 | Hormonal Regulation of Metabolic Rates | 575 |
| 25-12 | Molecular Mechanisms of Hormone Action..... | 577 |
| 25-13 | Pheromones | 580 |
| | Questions | 582 |
| | Supplementary Reading | 582 |

Part 6**REPRODUCTIVE PROCESSES****Chapter 26**

| | | |
|-------|--|-----|
| | REPRODUCTION | 586 |
| 26-1 | Sexual and Asexual Reproduction | 586 |
| 26-2 | Reproductive Systems | 588 |
| 26-3 | Meiosis | 589 |
| 26-4 | Spermatogenesis | 592 |
| 26-5 | Oogenesis | 593 |
| 26-6 | The Human Reproductive System: Male | 595 |
| 26-7 | The Human Reproductive System: Female | 596 |
| 26-8 | Human Reproduction: The Sex Act | 597 |
| 26-9 | Human Reproduction: Fertilization | 599 |
| 26-10 | Human Reproduction: Development and Implantation of the Blastocyst | 600 |
| 26-11 | Nutrition of the Embryo | 601 |
| 26-12 | The Embryonic Membranes | 602 |
| 26-13 | The Placenta | 603 |
| 26-14 | The Birth Process | 604 |
| 26-15 | Infant Nutrition | 606 |
| 26-16 | Controlling the Size of the Human Population | 606 |

| | | |
|-------------------|---|------------|
| 26-17 | Sexual Reproduction in Lower Animals | 608 |
| 26-18 | Mating Behavior and Synchronization of Sexual Activity | 611 |
| 26-19 | Care of the Young | 612 |
| | <i>Questions</i> | 612 |
| | <i>Supplementary Reading</i> | 612 |
| Chapter 27 | EMBRYONIC DEVELOPMENT | 613 |
| 27-1 | Stages in Development..... | 613 |
| 27-2 | Types of Eggs..... | 615 |
| 27-3 | Cleavage and Gastrulation | 615 |
| 27-4 | Morphogenetic Movements | 623 |
| 27-5 | Differentiation and Organogenesis | 623 |
| 27-6 | Development of the Nervous System | 624 |
| 27-7 | Development of Body Form | 626 |
| 27-8 | Formation of the Heart | 628 |
| 27-9 | Development of the Digestive Tract | 629 |
| 27-10 | The Development of the Kidney | 631 |
| 27-11 | Development of the Gonads and Reproductive Passages | 632 |
| 27-12 | Morphogenetic Movements of Cells in Organogenesis | 634 |
| 27-13 | Malformations | 635 |
| 27-14 | Twinning | 636 |
| 27-15 | Changes at Birth | 636 |
| 27-16 | Postnatal Development | 637 |
| 27-17 | The Aging Process | 638 |
| 27-18 | Regeneration | 639 |
| 27-19 | What Regulates Developmental Processes? | 641 |
| | <i>Questions</i> | 648 |
| | <i>Supplementary Reading</i> | 648 |
| Part 7 | HEREDITY AND EVOLUTION | |
| Chapter 28 | TRANSMISSION GENETICS: THE CHROMOSOME THEORY OF HEREDITY | 653 |
| 28-1 | The Development of Genetics | 653 |
| 28-2 | Chromosomes and Genes | 655 |
| 28-3 | Genes and Alleles | 657 |
| 28-4 | A Monohybrid Cross | 658 |
| 28-5 | Homozygous and Heterozygous Organisms | 659 |
| 28-6 | Phenotype and Genotype | 659 |
| 28-7 | Calculating the Probability of Genetic Events | 660 |
| 28-8 | Incomplete Dominance | 662 |
| 28-9 | Carriers of Genetic Diseases | 662 |
| 28-10 | Deducing Genotypes | 663 |
| 28-11 | Mendel's Laws of Segregation and Independent Assortment | 664 |
| 28-12 | Genic Interactions | 666 |
| 28-13 | Polygenic Inheritance | 667 |
| 28-14 | Multiple Alleles | 669 |
| 28-15 | Linkage and Crossing Over | 670 |
| 28-16 | The Genetic Determination of Sex | 672 |
| 28-17 | Sex-Linked and Sex-Influenced Traits | 674 |
| 28-18 | Inbreeding, Outbreeding and Hybrid Vigor | 674 |
| | <i>Questions</i> | 676 |
| | <i>Supplementary Reading</i> | 677 |

| | | |
|------------|--|-----|
| Chapter 29 | THE STRUCTURE AND FUNCTION OF GENES..... | 678 |
| | 29-1 The Origin of the "Central Dogma" | 678 |
| | 29-2 Genetic Information is Transmitted by DNA..... | 679 |
| | 29-3 The Constituents of DNA | 685 |
| | 29-4 The Watson-Crick Model of DNA..... | 686 |
| | 29-5 The Synthesis of DNA: Replication..... | 689 |
| | 29-6 The Genetic Code..... | 693 |
| | 29-7 Transcription: The Synthesis of RNA | 699 |
| | 29-8 Reverse Transcription..... | 702 |
| | 29-9 The Synthesis of a Specific Polypeptide Chain..... | 702 |
| | 29-10 Changes in Genes: Mutations..... | 706 |
| | 29-11 Gene-Enzyme Relations | 709 |
| | 29-12 The Operon Concept: Control of Protein Synthesis..... | 710 |
| | 29-13 Information Transfer Outside the Nucleus | 714 |
| | 29-14 Lethal Genes..... | 715 |
| | 29-15 Penetrance and Expressivity | 716 |
| | <i>Questions</i> | 716 |
| | <i>Supplementary Reading</i> | 717 |
| Chapter 30 | HUMAN INHERITANCE: POPULATION GENETICS | 718 |
| | 30-1 The Laws of Probability | 719 |
| | 30-2 The Mathematical Basis of Population Genetics | 720 |
| | 30-3 The Hardy-Weinberg Principle..... | 720 |
| | 30-4 Gene Pools and Genotypes | 721 |
| | 30-5 Estimating the Frequency of Genetic "Carriers" | 722 |
| | 30-6 Human Cytogenetics | 724 |
| | 30-7 The Inheritance of Physical Traits in Humans..... | 726 |
| | 30-8 The Inheritance of Mental Abilities in Humans..... | 727 |
| | 30-9 Genetic Counseling..... | 728 |
| | 30-10 Heredity and Environment: Twin Studies | 729 |
| | 30-11 Genetic Equilibrium and Genetic Drift..... | 730 |
| | 30-12 Factors Changing Gene Frequencies: Differential Reproduction..... | 731 |
| | 30-13 Evolution: The Failure to Maintain Genetic Equilibrium | 731 |
| | <i>Questions</i> | 731 |
| | <i>Supplementary Reading</i> | 732 |
| Chapter 31 | PRINCIPLES AND THEORIES OF EVOLUTION..... | 733 |
| | 31-1 Historical Development of the Concept of Evolution | 734 |
| | 31-2 The Darwin-Wallace Theory of Natural Selection | 735 |
| | 31-3 Modernization of the Darwin-Wallace Hypothesis | 736 |
| | 31-4 Differential Reproduction | 738 |
| | 31-5 Mutations – The Raw Materials of Evolution | 740 |
| | 31-6 Balanced Polymorphisms | 742 |
| | 31-7 Adaptive Radiation..... | 743 |
| | 31-8 Speciation | 745 |
| | 31-9 The Origin of Species by Hybridization | 747 |
| | 31-10 Phylogeny | 748 |
| | 31-11 The Origin of Life..... | 748 |
| | 31-12 Principles of Evolution | 751 |
| | <i>Questions</i> | 751 |
| | <i>Supplementary Reading</i> | 752 |
| Chapter 32 | THE EVIDENCE FOR EVOLUTION..... | 753 |
| | 32-1 The Fossil Record..... | 753 |
| | 32-2 The Geologic Time Table..... | 755 |

| | | |
|------|------------------------------------|-----|
| 32-3 | Precambrian Life | 758 |
| 32-4 | The Paleozoic Era..... | 758 |
| 32-5 | The Mesozoic Era..... | 762 |
| 32-6 | The Cenozoic Era..... | 769 |
| 32-7 | Other Evidence for Evolution | 772 |
| 32-8 | Biogeography | 777 |
| 32-9 | The Biogeographic Realms..... | 780 |
| | <i>Questions</i> | 781 |
| | <i>Supplementary Reading</i> | 782 |

Chapter 33

| | | |
|------|--|------------|
| | THE PRIMATES AND HUMAN EVOLUTION..... | 783 |
| 33-1 | The Primates | 783 |
| 33-2 | Fossil Primates | 789 |
| 33-3 | The Australopithecines | 792 |
| 33-4 | Fossil Hominids | 793 |
| 33-5 | The Neanderthaloids | 794 |
| 33-6 | The Origin of <i>Homo sapiens</i> | 796 |
| 33-7 | Human Characteristics..... | 798 |
| 33-8 | Cultural Evolution | 800 |
| 33-9 | The Present Races of Humans | 805 |
| | <i>Questions</i> | 807 |
| | <i>Supplementary Reading</i> | 807 |

Part 8**ECOLOGY****Chapter 34**

| | | |
|-------|---|------------|
| | PRINCIPLES OF ECOLOGY..... | 811 |
| 34-1 | The Concepts of Ranges and Limits | 811 |
| 34-2 | Structural Adaptations | 813 |
| 34-3 | Physiologic Adaptations | 814 |
| 34-4 | Color Adaptations | 815 |
| 34-5 | Adaptations of Species to Species | 816 |
| 34-6 | Habitat and Ecologic Niche | 818 |
| 34-7 | The Physical Environment..... | 819 |
| 34-8 | Solar Radiation | 820 |
| 34-9 | Energy Flow | 821 |
| 34-10 | Food Chains and Pyramids | 823 |
| | <i>Questions</i> | 825 |
| | <i>Supplementary Reading</i> | 825 |

Chapter 35

| | | |
|-------|--|------------|
| | SYNECOLOGY: COMMUNITIES, BIOMES AND LIFE ZONES..... | 826 |
| 35-1 | Populations and Their Characteristics | 826 |
| 35-2 | Population Cycles | 829 |
| 35-3 | Population Dispersion and Territoriality..... | 830 |
| 35-4 | Biotic Communities..... | 831 |
| 35-5 | Community Succession..... | 832 |
| 35-6 | The Concept of the Ecosystem | 833 |
| 35-7 | The Habitat Approach | 836 |
| 35-8 | The Tundra Biome..... | 837 |
| 35-9 | The Forest Biomes..... | 838 |
| 35-10 | The Grassland Biome | 841 |
| 35-11 | The Chaparral Biome | 842 |
| 35-12 | The Desert Biome..... | 843 |
| 35-13 | The Edge of the Sea: Marshes and Estuaries | 844 |
| 35-14 | Marine Life Zones | 845 |
