## FOREWORD

Lecture courses on materials and methods of construction are a regular feature of the work of the Road Research Laboratory. The lectures provide the basis for three textbooks of general reference. The first volume 'Soil mechanics for road engineers' was published in 1952 and the second volume 'Concrete roads—design and construction' was published in 1955. The present book is the third and final volume of the series.

The greater part of the book is based on the research work carried out by the Laboratory and embodies the results of both laboratory and full-scale road experiments. This has been supplemented from the experience of highway engineers and members of the road materials industry. The emphasis in the book is on the types of material, and the conditions of weather and traffic, encountered in the United Kingdom, but the principles involved have wide application.

The book includes a chapter on materials for white line road markings.

The book has been prepared mainly by members of the Bituminous Materials Section of the Laboratory under the guidance of Dr. A. R. Lee and Mr. J. H. Nicholas (Head of the Section). A list of those contributing is given on p. iv. The editorial work has been undertaken by Miss M. G. Greysmith.

Every effort has been made to include the latest available information. Suggestions and criticisms from readers will be welcomed and will be carefully considered in relation to any revision.

W. H. GLANVILLE

*Director of Road Research*

Road Research Laboratory,  
Harmondsworth,  
Middlesex.

August, 1962

## ACKNOWLEDGEMENTS

All members of the Bituminous Materials Section of the Laboratory have contributed in some way to the preparation of the book; the following were responsible for the writing of the individual chapters: H. G. Barnes, S. G. Boas-Traube, E. H. Green, C. M. Gough, J. G. James, G. Lowe, D. H. Mathews, D. S. Moncrieff, J. H. Nicholas (Head of Section), A. Please, W. L. Russell, P. D. Thompson, E. D. Tingle, D. S. Wilson and N. Wright. Chapters were also contributed by D. Croney and F. A. Shergold, both of the Soils Section of the Laboratory.

The Laboratory is under a debt of gratitude to a number of engineers and scientists who have in the past contributed to the lecture courses on bituminous materials. Acknowledgement is also due to those who have given helpful comments and advice on individual chapters.

## METRIC EQUIVALENTS OF BRITISH UNITS

1 in.	= 25·4 mm
1 ft	= 30·48 cm
1 yd	= 0·914 m
1 in./mile	= 15·8 mm/km
1 sq. in.	= 6·45 cm <sup>2</sup>
1 sq. yd	= 0·836 m <sup>2</sup>
1 cu. ft	= 28300 cm <sup>3</sup>
1 cu. yd	= 0·764 m <sup>3</sup>
1 gallon	= 4·54 litres
1 oz	= 28·35 g
1 lb	= 0·454 kg
1 cwt	= 50·8 kg
1 ton	= 1016 kg
1 lb/sq. in.	= 0·0703 kg/cm <sup>2</sup>
1 lb/sq. in./in.	= 0·0277 kg/cm <sup>2</sup> /cm
1 lb/sq. ft	= 4·88 kg/m <sup>2</sup>
1 lb/sq. yd	= 0·54 kg/m <sup>2</sup>
1 lb/cu. ft	= 16·02 kg/m <sup>3</sup>
1 lb/cu. yd	= 0·593 kg/m <sup>3</sup>
If $t^{\circ}\text{F} \equiv T^{\circ}\text{C}$ then $T \equiv \frac{5}{9} (t-32)$	

## BRITISH EQUIVALENTS OF METRIC UNITS

1 mm	= 0·0394 in.
1 cm	= 0·3937 in.
1 g	= 0·0353 oz
1 kg	= 2·20 lb
If $T^{\circ}\text{C} \equiv t^{\circ}\text{F}$ then $t \equiv \frac{9}{5} T + 32$	

# CONTENTS

	<i>Page</i>
British and metric equivalents . . . . .	xxiv
<b>CHAPTER 1. INTRODUCTION</b>	
Historical survey . . . . .	1
Scope of the book . . . . .	2
The properties of bituminous materials . . . . .	3
The structure of flexible roads . . . . .	5
Control of the quality of bituminous road surfacings . . . . .	7
Miscellaneous aspects of bituminous road surfacings . . . . .	7
References . . . . .	8
<b>CHAPTER 2. ROADMAKING AGGREGATES</b>	
Classification and nomenclature . . . . .	9
The effect of production processes on the quality of aggregates . . . . .	12
The testing of aggregates . . . . .	14
Applications of test results . . . . .	18
Summary . . . . .	21
References . . . . .	21
<b>CHAPTER 3. THE ORIGIN, PREPARATION AND CONSTITUTION OF BITUMINOUS ROAD BINDERS</b>	
Introduction . . . . .	23
The origin and preparation of road tar . . . . .	23
The origin and preparation of road bitumen (including natural asphalt) . . . . .	29
The chemical constitution of road tars and bitumens . . . . .	37
Appendix 3.A. Summary of requirements for road tar, road bitumen and lake asphalt in British and other Standards (1959) . . . . .	41
Summary . . . . .	50
References . . . . .	50
<b>CHAPTER 4. BITUMINOUS ROAD EMULSIONS</b>	
Introduction . . . . .	53
Emulsions, emulsifiers and stabilizers . . . . .	53
The preparation and application of emulsions . . . . .	56
Mechanism of breaking of emulsions in surface dressings . . . . .	59
General characteristics of road emulsions . . . . .	61
Uses of emulsions in road construction and maintenance . . . . .	64

	<i>Page</i>
Rubberized bitumen emulsions . . . . .	66
Summary . . . . .	66
References . . . . .	67

## CHAPTER 5. THE ADHESION OF BITUMINOUS BINDERS TO ROAD AGGREGATES

Introduction . . . . .	68
Adhesion in the absence of water . . . . .	68
The incidence of water in bituminous surfacings . . . . .	69
Types of adhesion failure caused by water . . . . .	70
Fundamental properties of the binder/stone/water system . . . . .	72
The mechanism of stripping and of adhesion failure . . . . .	74
Adhesion tests . . . . .	77
Methods of improving adhesion . . . . .	82
Appendix 5.A. The static immersion test . . . . .	84
Appendix 5.B. The Road Research Laboratory immersion wheel-tracking test . . . . .	85
Summary . . . . .	87
References . . . . .	87
Bibliography . . . . .	88

## CHAPTER 6. THE RHEOLOGY OF BITUMINOUS BINDERS

Introduction . . . . .	89
Viscosity . . . . .	89
Non-linear flow properties . . . . .	107
Elastic properties . . . . .	109
Visco-elastic behaviour of bitumens: an approximate treatment . . . . .	114
Ductility and brittleness . . . . .	119
Summary . . . . .	121
References . . . . .	121

## CHAPTER 7. THE MECHANICAL PROPERTIES OF BITUMINOUS MIXTURES

Introduction . . . . .	125
Dense and open-textured bituminous mixtures . . . . .	125
Resistance of bituminous mixtures to permanent deformation . . . . .	129
Flexibility and brittleness . . . . .	148
Common mechanical tests for bituminous materials . . . . .	153
The value of mechanical tests . . . . .	169
Appendix 7.A. Determination of apparent specific gravity and voids (B.S. 598) . . . . .	170
Percentage of voids in the aggregate filled with binder . . . . .	173
Summary . . . . .	173
References . . . . .	173
Bibliography . . . . .	175

## CHAPTER 8. THE WEATHERING OF BITUMINOUS MATERIALS

Introduction . . . . .	176
The action of weather on different types of bituminous road surfacing . . . . .	176
The methods of studying durability . . . . .	178
The influence of the composition of the bituminous mixture on its durability . . . . .	179
Full-scale road experiments on the durability of coated-macadam wearing courses . . . . .	180
Full-scale road experiments on the durability and surface texture of dense bituminous surfacings . . . . .	183
Factors affecting the durability of bituminous binders . . . . .	185
Durability tests . . . . .	195
The improvement of the performance of bituminous binders . . . . .	200
Appendix 8.A. The apparatus and procedure for the pressure oxidation test using the e.v.t. method of measurement . . . . .	204
Summary . . . . .	206
References . . . . .	206

## CHAPTER 9. THE DESIGN OF FLEXIBLE ROAD PAVEMENTS

Introduction . . . . .	210
The constituents of flexible pavements . . . . .	210
Types of flexible pavement . . . . .	210
The requirements for the road pavement . . . . .	211
The stresses in road structures . . . . .	212
Empirical methods of pavement design . . . . .	218
Recommendations for the structural design of new flexible pavements . . . . .	223
Full-scale pavement design experiments . . . . .	224
The design of hard shoulders . . . . .	230
Summary . . . . .	231
References . . . . .	231

## CHAPTER 10. COATED MACADAM AND FINE COLD ASPHALT

Introduction . . . . .	233
Development and general properties of coated macadam . . . . .	233
Basecourse and single-course coated macadam . . . . .	235
Wearing course coated macadam . . . . .	240
Coated macadam as a road base . . . . .	245
Fine cold asphalt . . . . .	246

	<i>Page</i>
Appendix 10.A. Summary of requirements for coated macadam in British Standards and related specifications . . . . .	247
Summary . . . . .	256
References . . . . .	256

## CHAPTER 11. DENSE BITUMINOUS SURFACINGS

### A. ROLLED ASPHALT

Introduction . . . . .	258
Nature of rolled asphalt . . . . .	258
Advantages of rolled asphalt as a surfacing material . . . . .	260
Selection of composition . . . . .	261
Application of coated chippings to the surface . . . . .	267
Resistance to skidding . . . . .	269
Basecourse material . . . . .	270
Rolled asphalt as a road base material . . . . .	271
Thin-application rolled asphalt . . . . .	272
Laying of rolled asphalt . . . . .	272
Cracking of asphalt on concrete . . . . .	274
Rolled asphalt for tracked vehicles . . . . .	274
Coloured rolled asphalt . . . . .	274

### B. DENSE TAR SURFACING

Introduction . . . . .	275
Laboratory design of dense tar surfacing . . . . .	275
Full-scale road experiments . . . . .	281
The commercial use of dense tar surfacing . . . . .	286
Summary . . . . .	290
References . . . . .	290
Bibliography . . . . .	291

## CHAPTER 12. SURFACE DRESSING

Introduction . . . . .	292
The functions and requirements of a surface dressing . . . . .	293
The factors affecting the quality and life of surface dressings . . . . .	294
The binder . . . . .	294
The chippings . . . . .	297
The external conditions . . . . .	299
The application of the materials . . . . .	301
Surface dressing of non-bituminous surfacings . . . . .	310
Surface dressing with emulsion binder . . . . .	311
Surface dressing under difficult conditions . . . . .	312
Summary . . . . .	314
References . . . . .	315
Bibliography . . . . .	315

	<i>Page</i>
<b>CHAPTER 13. PREVENTION OF WET-WEATHER DAMAGE TO SURFACE DRESSINGS</b>	
Introduction . . . . .	316
Methods of preventing wet-weather damage . . . . .	317
Details of methods of preventing wet-weather damage to surface dressings . . . . .	323
Appendix 13.A. Specification for the solution of an adhesion agent in light creosote oil for use in surface dressing in wet weather . . . . .	331
Appendix 13.B. The Road Research Laboratory immersion tray test . . . . .	332
Summary . . . . .	333
References . . . . .	333
<b>CHAPTER 14. SURFACE DRESSING MACHINERY</b>	
Binder distributors . . . . .	334
Fire precautions on pressure sprayers . . . . .	348
Gritting machines . . . . .	350
Rollers for surface dressing . . . . .	354
Summary . . . . .	355
References . . . . .	355
<b>CHAPTER 15. COATED-MACADAM AND ASPHALT MIXING PLANTS</b>	
Introduction . . . . .	357
General types of mixing plant . . . . .	357
The feeding system . . . . .	362
The drying and heating system . . . . .	363
The screening system . . . . .	367
Proportioning and batching of aggregate . . . . .	372
Proportioning of filler . . . . .	377
Heating and proportioning of binder . . . . .	378
Mixing units . . . . .	386
Storage of mixed materials . . . . .	392
Dust collection . . . . .	393
Temperature control . . . . .	398
Summary . . . . .	402
References . . . . .	402
<b>CHAPTER 16. MACHINERY FOR THE LAYING OF BITUMINOUS SURFACINGS</b>

Bibliography . . . . .	454

## CHAPTER 19. THE ‘RETREAD’ PROCESS

Introduction . . . . .	455
Materials suitable for the retread process . . . . .	455
Method of carrying out the retread process . . . . .	457
Summary . . . . .	461
References . . . . .	461

## CHAPTER 20. THE SAMPLING AND ANALYSIS OF BITUMINOUS ROAD MATERIALS

Introduction . . . . .	462
Methods of sampling bituminous road mixtures. . . . .	463
Determination of the proportions of binder, coarse and fine aggregate, filler and moisture . . . . .	468
Recovery of binder for examination . . . . .	482
Determination of apparent specific gravity and voids . . . . .	485
Summary . . . . .	489
References . . . . .	490

## CHAPTER 21. THE SAMPLING AND TESTING OF BITUMINOUS ROAD BINDERS

Introduction . . . . .	491
Sampling of bituminous road binders . . . . .	493
Tests for bitumens and tars . . . . .	496
Tests for road emulsions . . . . .	518
Appendix 21.A. Relationship between technical viscosity scales . . . . .	521
Summary . . . . .	524
References . . . . .	525

## CHAPTER 22. CONTROL IN THE MANUFACTURE AND LAYING OF BITUMINOUS ROAD MATERIALS

The need for control . . . . .	526
Monetary savings due to control . . . . .	527
Control of surface dressing work . . . . .	530
Control when mixing and laying pre-mixed bituminous surfacings. . . . .	534
Keeping of records . . . . .	540
Summary . . . . .	541
References . . . . .	541

## CHAPTER 23. THE PREVENTION AND CURE OF CRACKS IN BITUMINOUS SURFACINGS OVER CONCRETE

Introduction . . . . .	542
The causes of cracking . . . . .	542
The prevention of cracking . . . . .	547
The treatment of cracked surfacings . . . . .	553
Summary . . . . .	554
References . . . . .	555

## CHAPTER 24. RUBBER IN BITUMINOUS ROAD MATERIALS

Introduction . . . . .	557
Types of natural rubber used in bituminous road surfacings . . . . .	558

	<i>Page</i>
The effects of rubber on the properties of bituminous binders . . . . .	559
The effects of heat and mastication on rubber in bitumen . . . . .	561
Methods of mixing rubber with road materials . . . . .	563
Rubberized binders in surface dressing . . . . .	564
Rubberized mastic asphalt . . . . .	565
The use of rubber in rolled asphalt and bitumen macadam . . . . .	567
Latex in bitumen emulsions . . . . .	569
Rubberized slurry seals . . . . .	569
Appendix 24.A. The determination of rubber content by iodine value and specific viscosity measurements . . . . .	569
Summary . . . . .	571

8.1. Loss of stone and minimum road surface temperature of a thin surfacing . . . . .	177
8.2. The absorption of oxygen by tar oils at 65°C . . . . .	187
8.3. Relation between rate of absorption of oxygen per unit weight of tar and film thickness . . . . .	188
8.4. The change of e.v.t. with time of oxidation of six tars . . . . .	189
8.5. Diagram illustrating constituents of tar found by solvent analysis . . . . .	190
8.6. The change of e.v.t. and resin $B : C_2$ ratio with time of oxidation of a vertical-retort tar . . . . .	191
8.7. Pressure vessel assembly for oxidation test . . . . .	197
8.8. Relation between the road performance of the tars in the 1944 tar carpets after seven years and the brittle temperature of the tar after pressure oxidation . . . . .	198
8.9. Change of e.v.t. with time of oxidation of two bitumens and one tar . . . . .	203
9.1. Typical cross-sections of roads of flexible construction . . . . .	211
9.2. Stresses due to uniform circular loading on a semi-infinite elastic medium . . . . .	213
9.3. Theoretical distribution of vertical stress below a circular loaded area . . . . .	214
9.4. Comparison of theoretical and measured distributions of vertical stress beneath uniformly loaded area of radius 6 in. . . . .	215
9.5. Distribution of normal stress at various depths beneath a uniformly loaded circular area . . . . .	215
9.6. Comparison of the vertical stress distribution in a uniform medium and in a two-layer system . . . . .	216
9.7. Effect on vertical distribution of stress of introducing stronger surface layer . . . . .	217
9.8. Effect of type of road structure on vertical stress on subgrade . . . . .	218
9.9. The California bearing ratio test . . . . .	220
9.10. Typical C.B.R. test results . . . . .	221
9.11. C.B.R. design curves for different classes of road . . . . .	222
9.12. Layout of the experimental sections for pavement design experiment—Great North Road A.1—10 miles north of Boroughbridge, Yorkshire . . . . .	225
9.13. Comparison of deformations for identical sections surfaced with bituminous slag and rolled asphalt wearing courses—hand-pitched bases. (Experimental road—A.1, Yorkshire). . . . .	226
9.14. Comparison of deformations for identical sections surfaced with bituminous slag and rolled asphalt wearing courses—uncoated stone bases. (Experimental road—A.1, Yorkshire). . . . .	227
9.15. Comparison of deformations for identical sections surfaced with bituminous slag and rolled asphalt wearing courses—tar-coated stone bases. (Experimental road—A.1, Yorkshire). . . . .	228
10.1. The 1939 Colnbrook By-pass experiment on the composition of wearing course coated macadam. Diagram showing a typical series of compositions laid (gravel, sand, filler and bitumen) . . . . .	240
11.1. Bitumen and stone contents for samples of rolled asphalt laid commercially in recent years . . . . .	259
11.2. Composition of wearing course and single course mixture (B.S. 594) (Igneous and calcareous rock aggregate) . . . . .	263
11.3. Grading limits of sand in rolled asphalt, showing Clifford Richardson's grading and typical gradings of other fine aggregates . . . . .	265
11.4. Sideway force coefficients at 30 mile/h on sections of rolled asphalt with different binders, laid in 1951 . . . . .	267
