ACKNOWLEDGEMENTS

I WISH to acknowledge the help and encouragement I have received from all the clinicians whose cases have enabled me to learn something about the causes of the various abnormalities which may be seen in a radiograph.

I am also particularly indebted to Dr. A. D. Thomson of the Middlesex Hospital and Lecturer in Pathology to the D.M.R. course, for his advice on the pathological matter in this book, and for his contribution to the pathological descriptions incorporated into the text.

I wish to thank Dr. A. G. Stansfeld and Dr. R. J. R. Cureton of the Department of Pathology, St. Bartholomew's Hospital, for reviewing the histological material of the cases illustrated, and when necessary reporting again on the sections of many of the cases, particularly the bone tumours and developmental defects. Some of the cases were first seen in the 1935-1945 period, and it was felt essential to check the histological diagnoses made at the time in the light of recent advances in bone pathology, particularly to confirm and grade the cases of ostéoclastoma, and separate them from the variants, and to review those cases labelled "Ewing's" tumour.

I wish to thank Dr. G. DuBoulay of St. Bartholomew's Hospital for contributing the material, much of it original, for the section on "A translucent area in the vault of the skull". and Dr. J. H. Middlemiss of Bristol for his contribution on Madura foot.

The illustrations are reproduced from radiographs of patients passing through the x-ray departments of St. Bartholomew's Hospital and the Brompton Hospital with the exception of Fig. 47 (Thiemann's disease) kindly sent to me from Perth, Australia, by Dr. R. D. McKellar-Hall and Dr. A. L. Frazer, and Fig. 153 (hydatid cyst) sent to me from South Africa by Dr. A. S. Kimmel.

The illustrations are from photographs prepared from the original radiographs by D. F. Kemp in the photographic department of the Institute of Diseases of the Chest, the Brompton Hospital.

The references given are only a faint indication of my debt to the work of others. Most of the references are key ones which themselves refer to the work of others on that particular subject.

LONDON, 1960

GEORGE SIMON

INTRODUCTION

THE VALUE of grouping the x-ray material according to the type of x-ray shadow rather than the clinical disease label was established in *Principles of Chest X-ray Diagnosis* (Simon; 1956), and a similar method has been followed in this book. In a radiograph of the chest, changes in the pulmonary vessel pattern and the position of the interlobar fissures, mediastinal contents or diaphragm singly or together form important aids to the diagnosis, and in a radiograph of a bone a parallel consideration is the balance between absorption, sclerosis and periosteal new bone. A study of this balance, together with the size, shape and position of the lesion, in any given case may help to reduce the list of possibilities to a less formidable number, or to indicate the need for biochemical, endocrine, histological, haematological or bacterial investigations which might not otherwise be done, and which might lead to the correct diagnosis, or even to give the correct diagnosis out of hand before it could be established clinically.

The amount of material available for the book was found to be very large and, in spite of a very generous allocation of illustrations by the publishers, it has not been possible to include a radiograph to illustrate every condition described. The objective has been to select examples which illustrate the principles of bone x-ray diagnosis rather than to make a complete catalogue of all the conditions referred to. This also accounts for the mixture of common conditions and rarities.

When possible the radiographs have been reproduced full size or even slightly enlarged, and to this end large lesions in large bones have been avoided if alternative radiographs showing similar conditions in bones of smaller surface area have been available. For this reason and because of difficulties in satisfactorily reproducing the radiographs, no skull lesions are shown.

Limitations of space and numbers of illustrations forbade the inclusion of certain specialized investigations such as arteriography in the differential diagnosis of malignant bone tumours from relatively innocent conditions, and arthrography either by air or by opaque-contrast media. Nor has there been space to illustrate the appearances seen after the many orthopaedic operative procedures commonly practised.

The various biochemical and haemotological values quoted throughout the book, especially in the captions to figures, are all from the Department of Pathology, St. Bartholomew's Hospital. The lists of normal values drawn up by that department appear on pages 167-8 for reference.

DEFINITION OF TERMS

The meaning of certain words used in this book are defined below.

Decalcification

Synonyms.—Deossification, bone resorption, bone absorption, increased radiotranslucency

The term decalcification is used in this book in the radiological sense only, implying that a part of the bone shadow is rendered less radio-opaque or is invisible. It does not mean halisteresis and does not preclude the simultaneous removal of other elements than calcium. It describes neither the mechanism nor the inciting cause of the calcium loss, and is meant only as a descriptive term for the x-ray appearances. It is a term in general use, and no objection to it was raised by Cooke (1955) so long as it was understood that it did not mean simple halisteresis. It seems preferable to the term deossification. It is often the result of resorption, a process defined by McLean (1956) as "putting into solution of a complicated structure in such a fashion that it disappears, its end products entering the blood stream." This process is possibly brought about by something the osteoclasts do. The rôle of the osteoclasts in the removal of the matrix, collagen fibrils and calcium phosphorus complex crystals in day-to-day remodelling and in pathological bone removal is discussed by Pritchard (1956) and Hancox (1956).

Erosion

Circumscribed area of bone resorption. May be from infection, neoplasm or pressure.

E.S.R.

Erythrocyte sedimentation rate. All figures are for 1 hour (Westergren).

Hodgkin's disease

Synonyms.—Lymphadenoma; lymphoid follicular reticulosis; lymphogranuloma

Periostitis

Radiographic descriptive term to indicate shadow adjacent to the cortex suggesting periosteal new bone. Shadow the same whether the result of inflammation from infection, a haematoma or neoplastic cellular deposits.

Rose-Waaler test

Synonym.—S.C.A.T.

A positive Rose-Waaler test regardless of whether it was done as a sheep cell agglutination test or a modification with polystyrene latex.

Sclerosis

Descriptive term for increase of bone density whatever the cause.

TABLE OF CONTENTS

CHAPTER

PAGE

Genu valgus	19
Spondylolisthesis	20
Congenital dislocation of the hip	22
Displaced patella	24
Congenital dislocation of the talus	24
Scoliosis	24
3 ABNORMALITIES IN THE REGION OF THE EPIPHYES	26
Alteration in the maturity of the epiphyses	26
Acceleration of epiphyseal maturity	26
Retardation of epiphyseal maturity	27
Acceleration or retardation of epiphyseal fusion	28
Generalized alteration in the appearance of the epiphyses	28
Developmental defects	29
Chondro-osteodystrophy	29
Gargoylism	30
Dyschondroplasia or chondrodystrophy	30
Multiple epiphyseal dysplasia (chondrodyplasia)	31
Endocrine epiphyseal defects	32
Hypothyroidism (cretinism)	32
Dietetic epiphyseal disorders	32
Rickets	32
Scurvy	34
Heavy metal deposition in the metaphyseal region	35
Abnormality of a single epiphyseal region	36
Osteochondritis of the femoral head (Perthes' disease)	36
Slipped upper femoral epiphysis (adolescent coxa vara)	37
Osteochondritis of the tibial tuberosity (Osgood-Schlatter's disease)	38
Osteochondritis of a metatarsal epiphysis	39
Osteochondritis of the navicular (Köhler's disease)	39
Osteochondritis of the primary centre of a vertebral body (Calvé)	39
Osteochondritis of the secondary centre of a vertebral body (Scheuermann's disease)	40
Uncommon sites of epiphyseal fragmentation (osteochondritis, epiphysitis)	40
4 INCREASES IN BONE DENSITY	42
Generalized increase in bone density	42
Developmental osteopetrosis	42
Developmental osteopoikilosis	44
Secondary deposits	44
Myelosclerosis	46
Renal osteosclerosis	46
Hypervitaminosis	48
Fluorosis	48
Paget's disease	48
Increase in density of a single vertebra	48
Secondary deposit of carcinoma	48
Hodgkin's disease	48
Paget's disease	49
Local vascular disorder	49
Low-grade chronic osteomyelitis	50
Benign tumour or developmental defect	50
Primary bone sarcoma	50
Isolated increase in bone density in a limb bone, rib or pelvis	50
Developmental defect	50
Deep bone infarct	50
Healing cyst	52
Avascular necrosis or osteochondritis	52
Dense lunate	52

93 Condensans ilii	55
94 Leontiasis ossea—facial bones	55
95 Periostitis—second metatarsal	58
96 Post-traumatic periosteal shadow—femur	59
97 Post-traumatic periosteal shadow—same case 8 months later	59
98 Post-traumatic periosteal shadow—femur	60
99 Subperiosteal haematoma in scurvy—femur	60
100 Periosteal new bone in "march fracture"—second metatarsal	60
101 Periosteal new bone or callus in old rib fracture	60
102 Periosteal new bone in osteoid osteoma fibula	62
103 Periosteal new bone in diabetic—metatarsals	63
104 Pulmonary osteoarthropathy—wrist region	63
105 Cushing's syndrome—thoracic spinal osteoporosis	67
106 Steatorrhoea—even decalcification tibia	67
107 Osteomalacia—looser zone femur	70
108 Osteoporosis—in Cushing's syndrome—thoracic vertebrae	70

LIST OF ILLUSTRATIONS

FIG.		PAGE
109	Leukaemia—deposits femur .. .	71
110	Leukaemia—deposits femur .. .	71
111	Leukaemia—thoracic spinal deposits .. .	72
112	Gaucher's disease—femur .. .	72
113	Myelomatosis—deposits D.7 .. .	74
114	Hyperparathyroidism—fingers .. .	74
115	Cooley's anaemia—humerus and hand .. .	76
116	Hyperparathyroidism—thoracic vertebrae .. .	76
117	Osteomalacia—tibia .. .	76
118	Myelomatosis—deposits femur .. .	77
119	Secondary deposits—femur .. .	77
120	Myelomatosis—rib deposits .. .	78
121	Secondary deposits—humerus .. .	79
122	Senile decalcification—humerus .. .	79
123	Senile osteoporosis—dorsal vertebrae .. .	80
124	Senile osteoporosis—dorsal vertebrae .. .	80
125	Disuse decalcification—hand .. .	82
126	Sudek atrophy—patchy in hand .. .	82
127	Sudek atrophy—even in hand .. .	82
128	Cyst of uncertain aetiology—femur (no dense rim) .. .	84
129	Cyst of uncertain aetiology—humerus (trabeculated) .. .	84
130	Cyst of uncertain aetiology—calcaneum (no dense rim) .. .	85
131	Cyst of uncertain aetiology humerus (slight bone expansion) .. .	85
132	Hyperparathyroidism—radius .. .	86
133	Hyperparathyroidism—metacarpal .. .	86
134	Monostotic fibrous dysplasia—femur .. .	87
135	Monostotic fibrous dysplasia—pelvis .. .	87
136	Polyostotic fibrous dysplasia—humerus .. .	88
137	Polyostotic fibrous dysplasia—tibia .. .	88
138	Non-osteogenic fibroma—femur .. .	90
139	Aneurysmal bone cyst—dorsal vertebra .. .	90
140	Arteriovenous aneurysm—femur .. .	91
141	Haemangioma—femur .. .	91
142	Chondroma finger (no stippling) .. .	91
143	Chondroma finger (stippling) .. .	91
144	Osteoclastoma—femur .. .	93
145	Osteoclastoma—femur .. .	93
146	Osteoclastoma—vertebra .. .	93
147	Secondary deposit—humerus (cyst like) .. .	93
148	Xanthomatous granuloma—rib .. .	94
149	Xanthomatous granuloma—femur .. .	94
150	Gaucher's disease—humerus .. .	96
151	Sarcoidosis finger .. .	96
152	Tuberculous abscess—ilium .. .	96
153	Hydatid cyst in tibia .. .	98
154	Cyst of unknown aetiology—scaphoid .. .	98
155	Cyst of uncertain aetiology—radius (bone expansion) .. .	98
156	Cyst of uncertain aetiology—tibia (bone expansion) .. .	99
157	Fibrous dysplasia—rib (with bone expansion) .. .	99
158	Chondroma—finger (bone expansion) .. .	100
159	Chondroma—tibia (bone expansion) .. .	100
160	Osteoclastoma—fibula .. .	101
161	Osteoclastoma—tibia (cortical resorption) .. .	101
162	Osteoclastoma—radius .. .	103
163	Osteoclastoma—radius, 2 months after radiotherapy .. .	103
164	Osteoclastoma—radius, 18 months after radiotherapy .. .	103
165	Plasmacytoma—rib (multiple myelomatosis) .. .	103
166	Secondary deposit—tibia (bone expansion) .. .	103

LIST OF ILLUSTRATIONS

FIG.	PAGE
167 Pressure erosion—phalanx, from occupation	104
168 Pressure erosion—metatarsal from fibrosarcoma	104
169 Pressure erosion—thoracic vertebrae from neurofibroma	104
170 Surface erosion from chondroma	106
171 Osteomyelitis—terminal phalanx	106
172 Leprosy—forefoot	107
173 Raynaud phenomena with absorption—tip of terminal phalanx	107
174 Scleroderma with absorption—tip of terminal phalanx	107
175 Osteochondritis dissecans—knee	107
176 Myelomatosis with erosion—navicular	108
177 Fibrosarcoma—femur	109
178 Synovioma with invasion—acetabulum	109
179 Haemangioma—lower cervical spine and upper ribs	111
180 Secondary deposit—tibia, with surface erosion	111
181 Secondary deposit—vertebra, and paravertebral deposit	112
182 Tuberculous lesion—femur	112
183 Chronic osteomyelitis—humerus	118
184 Sarcoma (Ewing's type)—radius	118
185 Subacute osteomyelitis—tibia	119
186 Sarcoma (Ewing's type)—tibia	119
187 Acute osteomyelitis—fibula	119
188 Acute osteomyelitis—tibia	119
189 Chronic osteomyelitis—tibia (onion skin periosteal shadow)	120
190 Chronic osteomyelitis tibia (closed feathering of periosteal bone)	120
191 Tuberculosis middle third tibia	122
192 Tuberculosis humerus and ulna	122
193 Tuberculous dactylitis (periosteal new bone)	122
194 Tuberculous dactylitis (bone expansion)	122
195 Syphilitic osteitis—knee region	122
196 Syphilitic osteitis—tibia	123
197 Syphilitic osteitis—ulna	123
198 Sarcoma (Ewing's type)—fibula	125
199 Osteosarcoma—tibia	125
200 Osteosarcoma—femur	126
201 Osteosarcoma—ulna (erosion and closed feathering)	126
202 Osteosarcoma—femur ("sun ray" spicules)	127
203 Secondary deposit—pelvis (feathering)	127
204 Secondary deposit—femur from neuroblastoma	128
205 Secondary deposit—tibia, from neuroblastoma	128
206 Chronic osteomyelitis—tibia	131
207 Osteoid osteoma—tibia	131
208 Chronic osteomyelitis with sequestrum—tibia	133
209 Brodie's abscess—tibia	133
210 Osteoid osteoma—humerus	134
211 Osteoid osteoma—tibia (Volcano deformity)	134
212 Paget's disease—tibia	136
213 Paget's disease—humerus	136
214 Pyogenic arthritis—wrist	141
215 Pyogenic (typhoid) arthritis—hip	141
216 Tuberculous arthritis—knee	142
217 Tuberculous arthritis—hip	143
218 Tuberculous arthritis—ankle	143
219 Haemophilic arthritis—knee	146
220 Rheumatoid arthritis—hand	146
221 Rheumatoid arthritis—finger (magnification technique)	147
222 Rheumatoid arthritis—finger with periosteal new bone	147
223 Rheumatoid arthritis—hand with subchondral erosion	147
224 Rheumatoid arthritis with erosion styloid—ulna (several different patients)	148
