Preface

The principal theme of MSN conferences is the development and deployment of protocols, algorithms, systems, and applications for mobile ad-hoc and wireless sensor networks.

Following the success of MSN 2005 and MSN 2006, MSN 2007 provided a forum for researchers and practitioners working in related areas to exchange research results and share development experiences.

MSN 2007 attracted 304 submissions. Each paper was reviewed by at least three members of the Program Committee (PC) and reviewers. The final program included 75 papers, which covered a range of different topics, including routing, network protocols, energy management, security, etc.

The Organizing Committee would like to thank the Steering Committee members Xiaohua Jia, Sajal K. Das, Ivan Stojmenovic, and Jie Wu for their support and guidance in the conference organization. We would like to take this opportunity to thank all the authors for their submissions to the conference. Many of them traveled great distances to participate in this symposium and make their valuable contributions. Thanks to all the Program Committee members for their valuable time and effort in reviewing the papers. Without their help and advice this program would not be possible. Special thanks go to the conference PC Vice-Chairs, Eric Fleury, Vojislav B. Misic, and Pedro M. Ruiz, for their hard work in assembling the international PC and coordinating the review process.

We appreciate the support from the invited speakers, Sajal K. Das, and Zhisheng Niu. Their keynote speeches greatly benefited the audience. Last but not the least, we would like to thank the Local Organization Committee Chair, Deyun Gao, Yajuan Qin and all members for making the arrangements and for organizing an attractive social program.
