Sensors for  
**Ranging and Imaging**

# Acknowledgements

I would like to thank my wife, Mandi, for the time that I stole from her to write this book and for the good grace with which she bore my lack of attention. The affair is now over!

This is not my book alone, it is partly the distillation of eight years of teaching, feedback from students and support from colleagues. But mostly it reflects the help and support I have received from my family. Corrections to the style and grammar were made by Mandi and my mom-in-law, Mary Owens, and the artistic talents of my elder daughter, Jennie, breathed life into the drawings. My younger daughter, Sarah, and my Mom were always interested and always asked questions.

I am just sorry we didn't finish it in time for my Dad to read it.

# Table of Contents

<b>Sensors for Ranging and Imaging</b>	<b>i</b>
<b>Chapter 1 Introduction to Sensing</b>	<b>1</b>
1.1 Introduction 1	
1.1.1 Active Sensors 1	
1.1.2 Passive Sensors 1	
1.2 A Brief History of Sensing 2	
1.2.1 Sonar 2	
1.2.2 Radar 4	
1.2.3 Lidar 10	
1.3 Passive Infrared Sensing 12	
1.4 Sensor Systems 14	
1.5 Frequency Band Allocations for the Electromagnetic Spectrum 16	
1.6 Frequency Band Allocations for the Acoustic Spectrum 19	
1.7 References 21	
<b>Chapter 2 Signal Processing and Modulation</b>	<b>23</b>
2.1 The Nature of Electronic Signals 23	
2.1.1 Static and Quasi-Static Signals 23	
2.1.2 Periodic and Repetitive Signals 23	
2.1.3 Transient and Quasi Transient Signals 23	
2.2 Noise 24	
2.2.1 Thermal Noise 24	
2.2.1.1 Noise Power Spectrum for Thermal Noise 25	
2.2.2 Shot Noise 26	
2.2.2.1 Noise Power Spectrum for Shot Noise 27	
2.2.3 1/f Noise 27	
2.2.4 Avalanche Noise 28	
2.3 Signals 28	
2.4 Signals and Noise in the Frequency Domain 28	
2.4.1 The Fourier Series 30	
2.5 Sampled Signals 33	
2.5.1 Generating Signals in MATLAB 35	
2.5.2 Aliasing 37	

2.6	Filtering	38
2.6.1	Filter Categories	39
2.6.1.1	Butterworth	40
2.6.1.2	Chebyshev	40
2.6.1.3	Bessel	40
2.6.1.4	Elliptic	40
2.6.2	Filter Roll-off	40
2.6.3	The Ear as a Filter Bank	41
2.7	Analog Modulation and Demodulation	41
2.7.1	Amplitude Modulation	42
2.8	Frequency Modulation (FM)	45
2.9	Linear Frequency Modulation	50
2.10	Pulse Coded Modulation Techniques	52
2.10.1	Pulse Amplitude Modulation	52
2.10.2	Frequency Shift Keying	55
2.10.3	Phase Shift Keying	57
2.10.4	Stepped Frequency Modulation	60
2.11	Convolution	61
2.11.1	Linear Time Invariant Systems	61
2.11.2	The Convolution Sum	63
2.11.3	Worked Example: Pulsed Radar Echo Amplitude	65
2.12	References	67

<b>Chapter 3</b>	<b>IR Radiometers &amp; Image Intensifiers</b>	<b>69</b>
3.1	Introduction	69
3.2	Thermal Emission	70
3.2.1	Blackbody Radiation	70
3.2.2	The Planck Function	70
3.2.3	Properties of the Planck Function	71
3.2.4	Confirmation of Stefan-Boltzmann and Rayleigh-Jean Laws	74
3.3	Emissivity and Reflectivity	76
3.3.1	Worked Example: Black Body Radiation from Human Body	78
3.4	Detecting Thermal Radiation	79
3.4.1	External Photoeffect	80
3.4.2	Internal Photoeffect	80
3.4.2.1	Photoconductive Detectors	80
3.4.2.2	Photovoltaic Detectors	81
3.5	Heating	82
3.5.1	Bolometers	82
3.5.2	Pyroelectric Sensors	83
3.5.3	Thermopiles	84

3.6	Performance Criteria for Detectors	85
3.6.1	Responsivity	85
3.6.2	Noise Equivalent Power (NEP)	87
3.6.3	Detectivity and Specific Detectivity	87
3.7	Noise Processes and Effects	88
3.8	Applications	89
3.8.1	Passive Ultraviolet Sensor (External Photoeffect)	89
3.8.2	Radiation Thermometer (Internal Photoeffect: Thermopile)	90
3.8.3	Passive Infrared Sensor (Internal Photoeffect: Pyroelectric)	91
3.8.4	Crookes' Radiometer	92
3.9	Introduction to Thermal Imaging Systems	93
3.9.1	Scattering and Absorption	93
3.9.2	Scanning Mechanisms and Arrays	95
3.9.3	Micro-bolometer Arrays	96
3.9.4	Key Optical Parameters	97
3.10	Performance Measures for Infrared Imagers	98
3.10.1	Detector Field of View	98
3.10.2	Spatial Frequency	100
3.10.3	Signal to Noise Ratio for a Point Target	102
3.10.4	Worked Example: IRST System SNR	103
3.10.5	Signal to Noise Ratio for a Target in Ground Clutter	104
3.10.6	Noise Equivalent Temperature Difference (NETD)	105
3.10.7	Example	105
3.10.8	The Minimum Resolvable Temperature Difference (MRTD)	107
3.11	Target Detection and Recognition	107
3.11.1	Example of FLIR Detection	109
3.12	Thermal Imaging Applications	112
3.13	Image Intensifiers	114
3.13.1	First Generation Tubes	114
3.13.2	Second Generation Tubes	115
3.13.3	Limitations of Microchannel Plates	116
3.13.4	Third Generation Tubes	117
3.13.5	Spectral Characteristics of the Scene	117
3.13.6	Time Gating Microchannel Plates	117
3.14	References	119

**Chapter 4****Millimeter Wave Radiometers**

121

4.1	Antenna Power Temperature Correspondence	121
4.1.1	Example of Power Received from a Blackbody	123

4.2	Brightness Temperature	123
4.3	Apparent Temperature	123
4.4	Atmospheric Effects	125
4.4.1	Attenuation	125
4.4.2	Downwelling Radiation	125
4.4.3	Upwelling Radiation	125
4.5	Terrain Brightness	127
4.6	Worked Example: Space-based Radiometer	127
4.6.1	Temperature Contrast	128
4.7	Antenna Considerations	128
4.7.1	Beamwidth	128
4.7.2	Efficiency	128
4.7.3	Fill Ratio	129
4.8	Receiver Considerations	129
4.8.1	Mixer Implementations for Microwave Receivers	129
4.8.1.1	Mixer Specifications	130
4.8.2	Noise Figure	130
4.9	The System Noise Temperature	131
4.10	Radiometer Temperature Sensitivity	131
4.11	Radiometer Implementation	133
4.11.1	Total Power Radiometer	134
4.11.2	Dicke Radiometer	135
4.11.3	Performance Comparison between Radiometer Types	135
4.12	Intermediate Frequency and Video Gain Requirements	135
4.13	Worked Example: Anti Tank Submunition Sensor Design	135
4.13.1	Radiometer Implementation	142
4.13.2	Receiver Noise Temperature	142
4.13.3	Minimum Detectable Temperature Difference	143
4.14	Radiometric Imaging	144
4.14.1	Image Processing	144
4.15	Applications	147
4.15.1	Airborne Scanned Millimeter Wave Radiometer	148
4.15.2	Scanning Multi-channel Microwave Radiometer (SMMR)	149
4.15.3	Ground Based Millimeter Wave Radiometers	150
4.15.3.1	Low Visibility Imaging	150
4.15.3.2	Concealed Weapon Detection	152
4.15.3.3	Surveillance and Law Enforcement	154
4.15.3.4	Medical Imaging	154
4.15.4	Radio Astronomy	155
4.15.4.1	Single Dish Telescopes	156

	4.15.4.2 Telescope Arrays	156
	4.15.4.3 Applications	157
4.16	References	158
<b>Chapter 5</b>	<b>Active Ranging Sensors</b>	<b>161</b>
5.1	Overview	161
5.2	Triangulation	161
5.3	Pulsed Time-of-Flight Operation	164
	5.3.1 Sensor Requirements	165
	5.3.2 Speed of Propagation	166
	5.3.3 The Antenna	167
	5.3.4 The Transmitter	170
	5.3.4.1 Radar Transmitters	172
	5.3.4.2 Underwater Sonar Transmitters	175
	5.3.4.3 Ultrasonic Transmitters	176
	5.3.4.4 Laser Transmitters	179
	5.3.5 The Receiver	182
5.4	Pulsed Range Measurement	187
	5.4.1 Timing Discriminators	188
	5.4.2 Pulse Integration	191
	5.4.3 Time Transformation	194
5.5	Other Methods to Measure Range	194
	5.5.1 Ranging using an Unmodulated Carrier	195
	5.5.2 Ranging using a Modulated Carrier	195
	5.5.3 Tellurometer Example	197
5.6	The Radar Range Equation	199
	5.6.1 Derivation	199
	5.6.2 The dB Form	201
	5.6.3 Worked Example: Radar Detection Calculation	202
	5.6.4 Receiver Noise	204
	5.6.5 Determining the Required Signal Level	204
	5.6.6 Pulse integration and the probability of detection	206
5.7	The Acoustic Range Equation	207
	5.7.1 Example of Using the Acoustic Range Equation	209
5.8	TOF Measurement Considerations	210
5.9	Range Measurement Radar for a Cruise	210
5.10	References	212
<b>Chapter 6</b>	<b>Active Imaging Sensors</b>	<b>215</b>
6.1	Imaging Techniques	215
6.2	Range-Gate limited 2D Image Construction	216

6.3	Beamwidth Limited 3D Image Construction	219
6.3.1	Push-Broom Scanning	219
6.3.2	Mechanical Scanning	219
6.4	The Lidar Range Equation	222
6.5	Lidar System Performance	223
6.5.1	Direct Detection	224
6.5.1.1	Direct Detection Photodiodes	225
6.5.2	Heterodyne Detection	226
6.5.3	Signal to Noise Ratio and Detection Probability	227
6.5.4	Worked Example: Laser Radar Reflection from the Moon	228
6.6	Digital Terrain Models	230
6.6.1	Surface Models	231
6.6.2	Digital Landscapes	231
6.6.3	Thematic Visualization	232
6.6.3.1	Geographic Information Systems	233
6.6.3.2	3D City Models	233
6.7	Airborne Lidar Hydrography	234
6.8	3D Imaging	235
6.8.1	Radar Systems	236
6.8.2	Focused Beam Radar Imaging	237
6.8.3	Lidar Imaging	240
6.8.4	Jigsaw—Foliage Penetrating Lidar	243
6.9	Acoustic Imaging	244
6.9.1	Scanning Acoustic Microscopes	244
6.10	Worked Example: Lidar Locust Tracker	245
6.10.1	Requirement	245
6.10.2	Specifications	247
6.10.3	System Hardware	247
6.10.4	Determining the Required Aircraft Speed	247
6.10.5	Laser Power Density on the Ground	248
6.10.6	The power density of the reflected signals back at the laser	249
6.10.7	The Effect of the Sun	250
6.10.8	The Receiver	252
6.10.9	Conclusions	254
6.11	References	254

**Chapter 7****Signal Propagation**

257

7.1	The Sensing Environment	257
7.2	Attenuation of Electromagnetic Waves	257
7.2.1	Clear Weather Attenuation	259

7.2.2	Effect of Atmospheric Pressure (air density)	260
7.2.3	Effect of Rain	260
7.2.4	Effect of Fog and Clouds	262
7.2.5	Overall Attenuation	265
7.2.6	Attenuation through Dust and Smoke	266
	7.2.6.1 Attenuation of Radar Signals	267
	7.2.6.2 Attenuation of Laser Signals	268
7.2.7	Effect of atmosphere composition	271
7.2.8	Electromagnetic propagation through solid	272
7.3	Refraction of Electromagnetic Waves	273
7.4	Acoustics and Vibration	274
7.4.1	Characteristic Impedance ( $Z$ ) and Sound Pressure	275
7.4.2	Sound Intensity ( $I$ )	275
7.4.3	Sound Propagation in Gases	276
	7.4.3.1 Worked Example: Effect of Molecular Weight on Speed of Sound	277
	7.4.3.2 Effect of Temperature and Pressure	277
7.4.4	Sound Propagation in Water	278
7.4.5	Sound Propagation in Solids	280
7.4.6	Attenuation of Sound in Air	282
7.5	Attenuation of Sound in Water	284
7.6	Reflection and Refraction of Sound	287
	7.6.1 Waves normal to the Interface	287
	7.6.2 Waves at an angle to the Interface	287
	7.6.3 Refraction and Refraction	288
7.7	Multipath Effects	289
	7.7.1 Mechanism	289
	7.7.2 Multipath Lobing	292
	7.7.3 Multipath Fading	293
	7.7.4 Multipath Tracking	294
	7.7.5 Effects on Imaging	296
7.8	References	297

**Chapter 8****Target and Clutter Characteristics****299**

8.1	Introduction	299
8.2	Target Cross-Section	299
	8.2.1 Cross-section and the Equivalent Sphere	300
	8.2.2 Cross-section of Real Targets	300
8.3	Radar Cross-sections (RCS)	301
8.4	RCS of Simple Shapes	302
	8.4.1 Flat Plate	302

8.4.2	The Sphere	303
8.4.3	Trihedral Reflector	304
8.4.4	Other Simple Calibration Reflectors	304
8.5	Radar Cross-section of Complex Targets	306
8.5.1	Aircraft	306
8.5.2	Ships	306
8.5.3	Ground Vehicles	309
8.6	Effect of Target Material	311
8.7	RCS of Living Creatures	311
8.7.1	Human Beings	311
8.7.2	Birds	313
8.7.3	Insects	315
8.8	Fluctuations in Radar Cross-section	315
8.8.1	Temporal Fluctuations	315
8.8.2	Spatial Distribution of Cross-section	317
8.9	Radar Stealth	318
8.9.1	Minimizing Detectability	318
8.9.2	Anti-Stealth Technology	320
8.10	Target Cross-section in the Infrared	321
8.11	Acoustic Target Cross-section	324
8.11.1	Target Composition	324
8.11.2	Target Properties	324
8.11.3	Particulate Targets	325
8.11.4	Underwater Targets	325
	8.11.4.1 TS of a Sphere	326
	8.11.4.2 TS of Other Shapes	326
8.12	Clutter	328
8.12.1	Ground Clutter	328
8.12.2	Spatial Variations	329
8.12.3	Temporal Variations	333
8.12.4	Sea Clutter	335
8.13	Calculating Surface Clutter Backscatter	336
8.14	Calculating Volume Backscatter	338
8.14.1	Rain	339
8.14.2	Dust and Mist Backscatter	339
8.15	Sonar Clutter and Reverberation	342
8.15.1	Backscatter	342
8.15.2	Volume Reverberation	343
8.16	Worked Example: Orepass Radar Development	343
8.16.1	Requirement	343
8.16.2	Selection of a Sensor	344

8.16.3	Range Resolution	345
8.16.4	Target Characteristics	345
8.16.5	Clutter Characteristics	346
8.16.6	Target Signal-to-Clutter Ratio (SCR)	346
8.16.7	Antenna Size and Radar Frequency	347
8.16.8	Radar Configuration	347
8.16.9	Component Selection	347
	8.16.9.1 Antenna Options	347
	8.16.9.2 Radar Transmitter	348
	8.16.9.3 Receiver Options	349
8.16.10	Signal-to-Noise Ratio	351
8.16.11	Output Signal-to-Noise Ratio	351
8.16.12	Required IF Gain	352
8.16.13	Detection Probability and Pulses Integrated	352
8.16.14	Measurement Update Rate	352
8.16.15	Monitoring Rock Falling Down the Pass	352
8.16.16	Prototype Build and Test	353
8.17	References	355

**Chapter 9****Detection of Signals in Noise****357**

9.1	Receiver Noise	357
	9.1.1 Radar Noise	357
	9.1.2 Noise Probability Density Functions	359
	9.1.3 Infrared Detection and Lidar Noise	359
		9.1.3.1 Thermal Noise 359
		9.1.3.2 Shot Noise 360
		9.1.3.3 Avalanche Noise 361
		9.1.3.4 1/f Noise 361
		9.1.3.5 Total Noise Contribution 361
	9.1.4 Sonar Noise	361
		9.1.4.1 Thermal Noise 361
		9.1.4.2 Noise from the Sea 362
9.2	Effects of Signal-to-noise Ratio	362
	9.2.1 Probability of False Alarm	362
	9.2.2 Example	364
	9.2.3 Probability of Detection	364
	9.2.4 Detector Loss Relative to an Ideal System	368
9.3	The Matched Filter	369
9.4	Coherent Detection	370
9.5	Integration of Pulse Trains	371
9.6	Detection of Fluctuating Signals	373
9.7	Detecting Targets in Clutter	376

9.8	Constant False Alarm Rate (CFAR) Processors	377
9.9	Target Detection Analysis	379
9.9.1	Worked Example: Target Detection with Air Surveillance Radar	380
9.9.1.1	Determine Receiver Parameters	381
9.9.1.2	Radar Range Equation	382
9.9.1.3	Determine the Receiver Noise and SNR	382
9.9.1.4	Solve for the Detection Range (m)	383
9.9.2	Range Analysis Software Packages	385
9.9.3	Detection Range in Rain	385
9.10	Noise Jamming	387
9.10.1	Noise Jamming Example	388
9.11	References	388

## Chapter 10 Doppler Measurement

389

10.1	The Doppler Shift	389
10.1.1	Doppler Shift Derivation	389
10.2	Doppler Geometry	392
10.2.1	Targets moving at low velocities ( $v \ll c$ )	392
10.2.2	Targets Moving at High Speed ( $v < c$ )	392
10.3	Doppler Shift Extraction	393
10.3.1	Direction Discrimination	394
10.3.1.1	Sideband Filtering	395
10.3.1.2	Offset Carrier Demodulation	395
10.3.1.3	In-phase/Quadrature Demodulation	396
10.4	Pulsed Doppler	398
10.5	Doppler Sensors	403
10.5.1	Continuous Wave Doppler Ultrasound	403
10.5.2	Continuous Wave Doppler Radar	404
10.5.2.1	Intruder Detection	404
10.5.2.2	Sports Radar	406
10.5.2.3	Police Radar Speed Trap	407
10.5.2.4	Worked Example: Police Radar and Detector Comparison	407
10.5.2.5	Projectile Tracking Radar	411
10.5.2.6	Doppler Target Identification	412
10.5.3	Pulsed Doppler Ultrasound	413
10.5.4	Pulsed Doppler Radar	414
10.6	Doppler Target Generator	416

10.7	Case Study: Estimating the Speed of Radio Controlled Aircraft	417
10.7.1	Background	418
10.7.2	Measured Data	420
10.8	References	423
<b>Chapter 11</b>	<b>High Range-Resolution Techniques</b>	<b>425</b>
11.1	Classical Modulation Techniques	425
11.2	Amplitude Modulation	425
11.2.1	Range Resolution	425
11.3	Frequency & Phase Modulation	427
11.3.1	Matched Filter	427
11.4	Phase-Coded Pulse Compression	430
11.4.1	Barker Codes	431
11.4.2	Random Codes	432
11.4.2.1	Optimal Binary Sequences	433
11.4.3	Correlation	436
11.4.3.1	Binary Correlation	436
11.4.3.2	Circular Correlation	436
11.5	SAW Based Pulse Compression	437
11.6	Step Frequency	439
11.7	Frequency-modulated continuous-wave Radar	442
11.7.1	Operational Principles	442
11.7.2	Matched Filtering	445
11.7.3	The Ambiguity Function	446
11.7.4	Effect of a Non-Linear Chirp	449
11.7.5	Chirp Linearization	450
11.7.5.1	Open Loop Techniques	450
11.7.5.2	Determining the Effectiveness of Linearization Techniques	450
11.7.5.3	Implementation of Closed-Loop Linearization	451
11.7.5.4	Direct Digital Synthesis	453
11.7.6	Extraction of Range Information and Range Gating	454
11.7.6.1	FFT Processing	454
11.7.6.2	Other Range Gating Methods	455
11.7.7	Problems with FMCW	455
11.8	Stretch	455
11.9	Interrupted FMCW	456
11.9.1	Disadvantages	456
11.9.2	Optimizing for a Long Range Imaging Application	458
11.9.3	Implementation	458

11.10	Sidelobes and Weighting for Linear FM Systems	459
11.11	High Resolution Radar Systems	461
11.11.1	Industry	461
11.11.2	Automotive Radar	462
11.11.3	Research Radars	464
11.12	Worked Example: Brimstone Antitank Missile	464
11.12.1	System Specifications	465
11.12.2	Seeker Specifications (known)	466
11.12.3	Operational procedure—Lock-on after launch	467
11.12.4	System Performance (speculated)	467
11.12.4.1	Target Detection and Identification	467
11.12.4.2	Radar Front End	468
11.12.4.3	Antenna and Scanner	469
11.12.4.4	Signal Processing	471
11.12.4.5	Signal-to-Clutter Ratio: Clutter Levels	471
11.12.4.6	Target Levels	473
11.12.4.7	Signal-to-Clutter Ratio	473
11.12.4.8	Signal-to-Noise Ratio	474
11.12.4.9	Target Identification: Doppler Processing	475
11.12.4.10	Target Identification: Other Techniques	476
11.12.5	Tracking and Guidance	476
11.13	References	477

## Chapter 12 High Angular-Resolution Techniques

481

12.1	Introduction	481
12.2	Phased Arrays	482
12.2.1	Advantages of using Phased Arrays	482
12.2.2	Array Synthesis	483
12.2.3	Two Point Array	486
12.2.4	4 Point Array	487
12.2.5	The General Case	488
12.3	The Radiation Pattern	489
12.3.1	Linear Array	489
12.3.2	Radiation pattern: 2D Rectangular Array	490
12.4	Beam Steering	491
12.4.1	Active and Passive Arrays	493
12.4.2	Corrections to Improve Range Resolution	493
12.5	Array Characteristics	494
12.5.1	Antenna Gain and Beamwidth	494
12.5.2	Matching and Mutual Coupling	494
12.5.3	Thinned arrays	494
12.5.4	Conformal Arrays	495
