Preface

For reasons spelled out in the opening pages of Chapter 1, this fourth edition of *Psychology Applied to Teaching* has been written to be used in three ways: (1) as a text that provides a review of scientific information organized and presented so that it will be understood, remembered, and applied; (2) as a source of practical ideas about instructional techniques for student teachers and beginning teachers; and (3) as a means for teachers to improve their effectiveness as they gain experience in the classroom.

The following features, most of which were introduced in various earlier editions, have been selected, improved, and augmented to make this fourth edition more useful and effective than its predecessors:

Key Points. At the beginning of each chapter, Key Points are listed opposite major headings. They also appear in color in the margins of pages opposite sections in which each point is discussed. The Key Points call attention to sections of the text that are considered to be of special significance to teachers.

Suggestions for Teaching. Most chapters include summaries of research findings and principles relating to a particular topic that are followed by detailed discussion of various ways in which the information and concepts might be applied in classrooms. Numerous examples of applications at different grade levels are supplied, and readers are urged to select and record applications that will fit their own particular personality, style, and teaching situation in a personal Handbook. The Suggestions for Teaching are intended to be read while the book is used as a text *and* referred to by

future teachers and in-service teachers after they have completed course work. For ease in reference, these suggestions are printed in a different typeface from that used in other parts of the book.

Handbook Headings and Becoming a Better Teacher: Questions and Suggestions. These two features are intended to facilitate the preparation and use of a personal Handbook of teaching. Readers are urged to use the Handbook Headings, which appear in the page margins, to prepare a personal set of guidelines for reference before and during the student teaching experience and during the first years of teaching. The questions and suggestions in the Becoming a Better Teacher section are intended to make it possible for in-service teachers to analyze strengths and weaknesses and to plan how to improve their effectiveness as instructors. Suggestions for Developing a Personal Handbook and Becoming a Better Teacher: Questions and Suggestions are grouped together at the very end of the book (after the name and subject indexes, glossary, and bibliography).

Suggestions for Further Study. At the end of each chapter an annotated bibliography is presented offering sources of information on topics of interest to teachers. Some chapters also include within these suggestions instructions for carrying out simple scientific and observational studies and experiments.

Glossary. New to this edition is a glossary of key terms and concepts.

Indexes. In addition to the usual name and subject indexes at the end of the book, an Index to Suggestions for Further Study is included inside the front cover. An Index to Suggestions for Teaching and an Index to Becoming a Better Teacher: Questions and Suggestions are provided inside the back cover.

Other than modifications and improvements in the features just described, this fourth edition of *Psychology Applied to Teaching* differs from earlier editions most notably in the organization and content of chapters. The new sequence of chapters (indicated by the Contents and summarized at the end of Chapter 1 on page 22) is designed to improve the structure and clarity of the presentation and also to reflect research trends in psychology and developments in education in the 1980s. Another major departure from the first three editions is that this fourth edition marks the beginning of a collaboration between Robert F. Biehler and Jack Snowman.

We would like to acknowledge our indebtedness to Marjorie V. Roberts who typed the various drafts of the manuscript and to the editors and artists of Houghton Mifflin Company who supervised the transition of the final manuscript into a text.

The following psychologists provided prerevision information regarding their perceptions of strengths and weaknesses of the third edition: Sandra Anselmo, University of the Pacific; Jason Brunk, Ohio University; Eileen Corcoran, State University of New York at Brockport; Robert P. Green, Jr., Clemson University; Bernard Guarini, Worcester State College; John Klem, Ball State University; and Judith Lessow-Hurley, San Jose State University.

The following psychologists read one or more drafts of the manuscript and offered suggestions for improvement: Donald J. Cunningham, Indiana University; Richard M. Evans, Marine Corps Communication-Electronics School at Twenty-nine Palms, California; Robert P. Green, Jr., Clemson University; Raymond B. Miller, University of Idaho; Warren Williams, Eastern Michigan University; and Barry J. Wilson, University of Northern Iowa.

Contents

Preface	x
<i>1 Applying Psychology to Teaching</i>	2
“What They Didn’t Tell Us”	3
Uses of This Book	6
Using This Book to Acquire Scientific Information 8 / Using This Book As a Source of Practical Ideas 8 / Using This Book to Become a Better Teacher 9	
Features of This Book	9
Key Points 9 / Suggestions for Teaching 10 / Developing a Personal Handbook of Teaching 10 / Becoming a Better Teacher 12 / Suggestions for Further Study 14	
The Nature and Values of Science	14
Limitations of Unsystematic Observation 15 / Strengths of Scientific Observation 15	
Studying Behavior: Complicating Factors	16
Selection and Interpretation of Data 17 / Influences on Researchers and Subjects 18 / Trends in Enthusiasm for New Ideas 18	
The Teacher-Practitioner and the Teacher-Theorist	19
The Contents of This Book	22
Suggestions for Further Study	22
 1 DEVELOPMENT	 31
<i>2 Stages of Psychosocial and Cognitive Development</i>	32
Erikson: Psychosocial Development	35
	iii

Factors That Influenced Erikson 35 / Stages of Psychosocial Development 36 / Factors Affecting Identity 38	
Suggestions for Teaching: Applying Erikson's Theory in the Classroom	48
Piaget: Cognitive Development	50
Factors That Influenced Piaget 50 / Basic Principles of Piaget's Theory 52 / Stages of Cognitive Development 56 / Educational Implications of Piaget's Theory 58	
Suggestions for Teaching: Applying Piaget's Theory in the Classroom: Preschool and Primary Grades	63
Suggestions for Teaching: Applying Piaget's Theory in the Classroom: Secondary Grades	64
Piaget's Analysis of the Moral Judgment of the Child 64 / The Hartshorne and May Studies of Morality 68 / Kohlberg's Description of Moral Development 72	
Suggestions for Teaching: Encouraging Moral Development	74
Suggestions for Further Study	75
<i>3 Age-Level Characteristics</i>	84
Preschool and Kindergarten	86
Physical Characteristics 86 / Social Characteristics 87 / Emotional Characteristics 92 / Cognitive Characteristics 93	
Primary and Elementary Grades	97
Physical Characteristics 97 / Social Characteristics 102 / Emotional Characteristics 105 / Cognitive Characteristics 109	
Secondary Grades	114
Physical Characteristics 114 / Social Characteristics 118 / Emotional Characteristics 120 / Cognitive Characteristics 127	
Suggestions for Further Study	129

2 LEARNING 135

4 Behavioral Theories 136

The Organization of These Chapters on Learning	137
Three Behavioral Learning Theories	139
Pavlov: Classical Conditioning 139 / Skinner: Operant Conditioning 141 / Bandura: Observational Learning 142	
Some Implications of Behavioral Theories	144
Illustrations of Operant Conditioning Principles	145
Imaginary Experiences in a Skinner Box 145 / Principles Illustrated by Experiences in a Skinner Box 147 / Further Experiences in a Skinner	

Box 149 / Principles of Behavior Shaping 150	
Educational Applications of Behavioral Theory	152
Programmed Instructional Techniques 152 / Personalized System of Instruction 157 / Computer-Assisted Instruction 159	
Behavior Modification	162
Basic Procedures of Behavior Modification 163 / Behavior Modification Techniques Using Positive Reinforcement 163 / Behavior Modification Techniques Using Aversive Control 166	
Suggestions for Teaching: Applying Behavioral Theories in the Classroom	169
Suggestions for Further Study	189

5 Information Processing **194**

Memory Structures and Control Processes	196
The Sensory Register 197 / The Nature of Recognition 197 / The Impact of Attention 197 / Short-Term Memory 201 / Long-Term Memory 203 / Ways That Information Is Encoded and Retrieved 205 / Metamemory 210	
Helping Students Improve Memory Capability	212
Ways You Might Help Students Use Mnemonic Devices 212 / Helping Students Use Learning Strategies 218	
Assessing Individual Differences in Cognitive Processes	224
An Explanation for the Failure of Ability Grouping 226 / The Inventory of Learning Processes 226	
Suggestions for Teaching: Helping Students Process Information	227
Suggestions for Further Study	240

6 Cognitive Strategies **244**

Principles Proposed by Early Cognitive Theorists	246
Principles of Gestalt Psychology 246 / Lewin: Life Space Concept 249 / Köhler: Problem Solving by Insight 250	
Piaget's Theory and Open Education	252
Bruner's Arguments in Favor of the Discovery Approach	253
Differences Between Reception and Discovery Learning	254
The Nature of Reception and Discovery Learning 254 / The Need for Genuine Understanding 255	
Some Educational Applications of the Discovery View	256
Open Education 256 / Bruner: The MACOS Curriculum 258 / Techniques for Stimulating Discussion 259	
Criticisms of the Discovery Approach	259
Suggestions for Teaching: Using Open Education and Discussion Techniques	263

Teaching Techniques of Problem Solving	281
Teaching Problem-Solving Techniques: Grades 4 through 9	281 /
Teaching Problem-Solving Techniques: Grades 10 through 12	285
Transfer	289
The Nature and Significance of Transfer	289 /
Theoretical Interpretations of Transfer	291 / Principles of Transfer 294
Suggestions for Teaching: Encouraging Transfer	295
Suggestions for Further Study	303

3 A TEACHING STRATEGY **307**

7 Objectives **308**

Reasons for Stating Objectives	310
Various Ways to State Objectives	311
Mager's Suggestions for Stating Specific Objectives	311 /
Gronlund's Suggestions for Stating General Objectives	312 /
Ojemann's Suggestions for Inviting Students to State Objectives	313
Suggestions for Teaching: Using Instructional Objectives	315
A Taxonomy of Cognitive Objectives	319
Evaluations of the Effectiveness of Cognitive Objectives	321
Suggestions for Teaching: Using Cognitive Objectives	323
A Taxonomy of Affective Objectives	328
Evaluations of the Effectiveness of Affective Objectives	330 /
Affective Objectives and Humanistic Education	331 /
Values Clarification	331
Suggestions for Teaching: Using Affective Objectives	334
A Taxonomy of Psychomotor Objectives	341
Suggestions for Teaching: Using Psychomotor Objectives	343
Using National Assessment Objectives	349
Background of the National Assessment Program	349 /
Objectives Proposed by National Assessment Committees	352
Suggestions for Further Study	358

8 Motivation (and Learning) **362**

The Complex Nature of Motivation	364
The Behavioral View	366
Behavioral Interpretations of Motivation	366 / Limitations of the Behavioral View 368
The Cognitive View	371
Cognitive Interpretations of Motivation	371 / Limitations of the Cognitive View 373

Maslow's Theory of Growth Motivation	373
A Hierarchy of Needs 374 / Differences Between Deficiency and Growth Needs 374 / Implications of Maslow's Theory 375 / Limitations of Maslow's Theory 377	
Aspirations and Achievement	377
Impact of One's Level of Aspiration 378 / The Need for Achievement 379 / Fear and Avoidance of Success 380 / Reactions to Failure 381 / Implications of Analyses of Aspirations and Achievement 382 / Limitations of Conceptions of Aspiration and Achievement 383	
The Impact of Classroom Atmosphere and of the Teacher	384
Classroom Atmosphere 384 / Teacher Attitude and Personality 387	
Suggestions for Teaching: Motivating Students to Learn	390
Suggestions for Further Study	427

9 Evaluation **428**

Varied Aspects of Evaluation	429
The Nature and Significance of Report Cards	432
Suggestions for Teaching: Making Out Report Cards	434
Reducing Subjectivity	439
The Limitations of Personal Impressions 439 / Mechanisms That Contribute to Subjectivity 440 / The Impact of Teacher Expectations 441 / Characteristics of Tests 446 / Goals to Strive for in Improving Evaluation 448	
Suggestions for Teaching: Effective Techniques of Evaluation	449
Converting Scores into Grades: Norm-Referenced Approach	475
Calculating a Measure of Central Tendency 477 / Converting Scores into Letter Grades 478	
Converting Scores into Grades: Criterion-Referenced Approach	486
Ingredients of a Successful Mastery Approach / 487	
Suggestions for Teaching: Using a Mastery Learning Approach	488
Miscellaneous Comments on Mastery Learning 490 / Converting Scores into Grades: Mastery Approach 496	
Suggestions for Further Study	501

4 INDIVIDUAL DIFFERENCES **505**

10 Interpreting Scores on Standardized Tests **506**

Changes in Thinking About Ability Grouping	508
The Truth-in-Testing Movement	509
An Evaluation of the Truthfulness of Testing 509 / Legal Interpretations of Truth-in-Testing Laws 510 / Are Standardized Tests Biased? 512	

Seeking a Balance Between Equality and Excellence	513
Standardized Tests	514
The Nature of Standardized Tests 515 / Types of Standardized Tests 515 / Criteria for Evaluating Standardized Tests 516 / Interpreting Standardized Test Scores 519	
The Nature and Measurement of Intelligence	526
Definitions of Intelligence 526 / Significant Characteristics of Intelligence Tests 529 / The Distribution of Measured Intelligence 532 / Explaining Differences Between Theoretical and Actual Distributions 533 / The Classification of Children Low in Intelligence 534	
Evaluating the Truth-in-Testing Movement	536
Culture-Free Tests and Coaching 537 / The Limited Predictive Value of Specialized Tests 539	
The Heredity-Environment Controversy	540
A Brief History of the Heredity-Environment Controversy 540 / Attitudes Toward Intelligence and Intelligence Tests 542 / Two Interpretations of Group Differences 543	
The Project on Classification of Exceptional Children	546
Disadvantages and Advantages of Labeling 546 / Assumptions Underlying Classification 547 / Social Functions of Classification 548	
The Education for All Handicapped Children Act	550
Suggestions for Further Study	552
 <i>11 Teaching Exceptional Students</i>	 554
Disadvantaged Students	555
Characteristics of Disadvantaged Pupils / 556	
Suggestions for Teaching: Instructing Disadvantaged Pupils	559
Bilingual and Multicultural Education 568 / Techniques for Teaching Disadvantaged Elementary Grade Students 570 / Techniques for Teaching Disadvantaged Secondary Students 571	
Slow Learners	573
Characteristics of Slow Learners 573	
Suggestions for Teaching: Instructing Slow Learners	574
Rapid Learners	579
Characteristics of Rapid Learners 580	
Suggestions for Teaching: Instructing Rapid Learners	582
An Analysis of Mainstreaming	587
Factors Leading to Mainstreaming 587 / Evaluations of the Effectiveness of Mainstreaming 588	
Implementing Public Law 94-142	590
Specific Learning Disabilities	593
Definitions of Specific Learning Disabilities 593 / Determining If a	

Child Has a Learning Disability 594 / Techniques for Helping Pupils Overcome Learning Disabilities 596	
Emotionally Disturbed Students	600
Definitions and Classifications of Emotional Disturbance 600 / Teaching Emotionally Disturbed Students 602	
Suggestions for Further Study	605
<i>12 Classroom Control</i>	608
The National Safe School Study	609
Analyzing Reasons for Misbehavior	611
Some Possible Explanations for Misconduct in School 611 / Attempting to Allow for Causes of Misconduct 613	
Analyzing Your Techniques of Classroom Management	614
Suggestions for Teaching: Maintaining Classroom Control	619
Influence Techniques	626
Supporting Self-Control 626 / Situational Assistance 628 / Reality and Value Appraisal 631 / Retribution 633	
I-Messages and the No-Lose Method	637
Suggestions for Further Study	640
<i>Epilogue Coping and Improving</i>	643
Coping with Frustrations	644
Consistency and Control	646
Improving Your Skills As a Teacher	648
Student Evaluations and Suggestions 648 / Observation Schedules 652 / Using Your Handbook to Improve Your Teaching 652	
Author/Source Index	656
Subject Index	661
Glossary	673
Bibliography	682
Suggestions for Developing a Personal Handbook and Becoming a Better Teacher: Questions and Suggestions	699

PSYCHOLOGY APPLIED TO TEACHING

Contents

Key Points

**The Nature and Values
of Science**

Scientific methods: sampling, control, objectivity, publication, replication

**Studying Behavior:
Complicating Factors**

Differences of opinion due to selection and interpretation of data
Cognitive dissonance: rejection of conflicting ideas
Experimenter bias effect: communication of expectations
Hawthorne effect: reactions to change and attention
Educational "fads" often traceable to accumulating knowledge

**The Teacher-
Practitioner
and the
Teacher-Theorist**

Teacher-practitioner: enthusiastic commitment
Teacher-theorist: objective analysis

Applying Psychology to Teaching

This book differs from most other texts you are likely to have read because it has been designed to be used in three different ways. The simplest and most direct way to begin to explain why it is different and how it can be used is to relate a frustrating but enlightening experience.

“What They Didn’t Tell Us”

A few years after the “senior” author of this book began teaching a course in educational psychology, a student-teacher chapter of the state teachers’ association was formed on campus. The leaders of this group, who were scheduled to do student teaching the following September, decided to present a panel discussion the last meeting of the year in May. They invited five recent graduates who were just completing their first year of teaching to discuss the provocative topic: “What They Didn’t Tell Us.” Since “they” included professors who taught educational psychology, and since the professor who is writing these words was just beginning to think about getting to work on a text, he decided to go to the discussion and take notes. The meeting was very well attended and the panelists had the audience of future student teachers on the edge of their seats much of the evening. When the meeting finally broke up most of the audience left the room with a sense of satisfaction. They had picked up all sorts of valuable tips straight from the horse’s mouth. The professor and would-be author, on the other hand, was bothered and bewildered.

The college the panelists had graduated from was quite small at that time and all of them had taken his course in educational psychology just two years before. Several of the bits of information that the panelists had told the student teachers to be sure to pick up somehow or other before they entered a classroom had been discussed (directly or indirectly) in the ed psych text they had read. Yet these former students—who had successfully answered test questions and earned high grades in educational psychology—now talked as if they had never heard of such a course.

During the question-and-answer period that followed the panelists' presentations, the professor had thought about asking to be recognized, standing up, and saying something like, "This discussion really ought to be called 'What We Forgot.' I *did* tell you some of the things you are talking about, but you didn't remember them." Since he tends to be timid about speaking in public, though, he squirmed silently in his seat in the back row and fumed and brooded. Later that night, after having had time to think things over, he was glad that he hadn't sounded off because he concluded that he (along with the author of the text he had used) was more to blame than the former students for their failure to remember and use what they had learned.

At that early stage of his career the professor made up tests similar to most of those he had taken all through his college years. After announcing that an exam would be given, he went through the assigned chapters of the text. When he found a section that impressed him as important *or* which looked as if it could easily be converted into a test question, he wrote a multiple-choice item. Much of the time, it must be confessed, information stressed in questions was selected more for testability than for importance or significance. After they had taken the first exam students figured out that the most sensible way to study for subsequent exams was to try to put themselves in the place of the person writing the questions. That is, they skimmed through the book and selected for study sections that impressed them as likely to appeal to someone making up items for an exam. Since they studied primarily to answer test questions, they naturally assumed that what they had learned had served its purpose as soon as they completed an exam. Since there was no longer any reason to remember it, they forgot it.

While the kinds of test questions used undoubtedly contributed to the tendency for students to fail to remember what they had learned, the text on which the questions were based also deserved part of the blame. The author made no attempt to illustrate how what was discussed might be applied. His philosophy seemed to be: "My job is to tell you about facts, principles, and theories. Your job is to figure out what to do with what I tell you." Since the students realized that their primary responsibility during the course was to pass exams, they had no inclination at that time to try to figure out how to apply what they read. And since the book offered no
