PREFACE

AutoCAD® is probably one of the more intimidating software packages taught in education. With its stiff computer hardware requirements and numerous commands, it can be a daunting task for both the instructor to teach and the student to learn. This book focuses on using AutoCAD as a drafting tool. Wherever possible, examples and exercises are used to provide real-world problems in an effort to make this book practical as well as functional. Included are AutoCAD's most popular 2-D drawing commands that should be covered with one-half of an academic year for high schools or one college semester.

UNIQUE FEATURES

While there are many good AutoCAD books on the market, *Fundamentals of AutoCAD* has several unique and important features, including the following:

- **Updated for AutoCAD Release 13c4 for Windows® 95/NT 4.0.** Many AutoCAD texts are based on the initial version of AutoCAD Release 13 and do not include the new commands and features released in version 13c4. Version 13c4 included several new commands and dialog boxes, which are all thoroughly covered in this text. One of the most significant features of this upgrade was support for Windows 95 and Windows NT 4.0. While the hardware and cost requirements for Windows NT 4.0 are out of reach for most educational institutions, Windows 95 offers an inexpensive alternative. The interface is similar in both operating systems, however, and gives students trained with Windows 95 the versatility to work with the Windows NT version of AutoCAD as well.
- **Unit Exercises.** Each unit contains 10 short-answer questions as well as one applied exercise that is intended to develop students' AutoCAD skills. The exercises are generic in nature and are not for any one discipline. These are not meant to be the only assignments given to students; the instructor should include additional assignments of his or her own development or consider using one of the optional workbooks that are available as supplements to this text.
- **Optional Workbooks.** Workbooks are available for specific educational disciplines: Mechanical Drafting Workbook (ISBN 013-887738-6), Architectural Drafting Workbook (ISBN 0-13-758574-8), and Electronics Drafting Workbook (ISBN 013-758566-7) are currently available. These workbooks describe the use of commands in a manner specific to a particular discipline. Discipline-specific examples and exercises are also included, giving the students more real-world experience.
- **Work Disk.** By using the work disk, students can work with commands and features immediately without having to create complex geometry. See the disk for instructions on its use.
- **Web Page.** One of the most exciting new features is a Web page for this text. On this interactive Web page, students can provide feedback to the authors, participate with other students in electronic discussion groups, test their retention with online quizzes, and link to other Web pages that contain information and news about the world of AutoCAD. Instructors can also provide feedback to the authors, participate with other instructors in discussions about curriculum, give online quizzes and have the results electronically mailed back to the instructor, and link to other Web pages that contain the latest information and news about AutoCAD and AutoCAD in education.

ORGANIZATION OF THE TEXT

The text is divided into 16 units to correspond with the 16 weeks in a typical semester. Each unit is divided into sections, grouping similar commands and exercises together. Units 1 through 4 present the basic skills necessary to begin using AutoCAD. Many of the skills in these sections form the foundation for other commands, so it is imperative that students understand these units thoroughly. Units 5 through 8 expand on various drawing commands and techniques, allowing students to create complex geometry. These units ensure students can create any shape they can imagine. Units 9 through 11 introduce the various ways to select and edit existing objects. A large amount of editing is usually required throughout the course of a drawing. Editing commands not only modify existing objects, but they also create new objects. Unit 12 includes advanced drawing commands that assist in the creation of complex shapes and objects. Unit 13 presents what is traditionally thought of as the most difficult concept for new students—dimensioning an object. Unit 14 allows students to extract information from their drawings for further analysis. Unit 15 discusses how to automate the placement and creation of repetitive shapes. Finally, Unit 16 introduces the concept of isometric drawings and their creation.

UNIT LAYOUT

To assist in the learning of AutoCAD, each unit consists of the following sections:

- **Overview.** Briefly describes the material to be presented in the unit.
- **Objectives.** Different from the outline, this section presents specific skills that students should have upon completion of the unit.
- **Outline.** Outlines the entire unit and lists the commands to be presented.
- **Illustrations.** Each unit contains numerous illustrations to help in describing a specific function or command. AutoCAD is a very graphic package, and the addition of well-defined illustrations helps in clarifying difficult concepts.
- **Tutorials.** Tutorials provide the procedures necessary to utilize a command or feature. Tutorials are located in boxes and are easy to find. The segregation of these tutorials makes them easy to identify. A tutorial will walk students through a particular command or concept so they can see first-hand how a command or series of commands is used.
- **Skill Builders.** Skill Builders provide tips and shortcuts that allow for easier or faster AutoCAD operation. They are techniques commonly used by professionals.
- **For the Professional.** For the Professional introduces advanced concepts that increase students' understanding of an AutoCAD command or feature. AutoCAD was developed for the creation of engineering graphics. Many of the commands and features are based on tools or skills from manual drafting. A For the Professional is used to provide additional information that may help students' avoid problems, or offers advice that relate to the topic. This will increase students' awareness of how and why a command is used in a specific situation.
- **Summary.** The summary is a wrap-up of the unit used to reinforce retention and to promote additional thought and discussion.
- **Review.** The review consists of 10 short-answer questions that test students' retention of commands and procedures. They can be used as homework or to spark a discussion after the lecture.
- **Exercises.** These short drawing assignments are meant to incorporate many of the commands and features presented within the unit. Each assignment comes complete with a step-by-step procedure for getting started. As students progress through the units, the step-by-step procedures are decreased, and students are asked to draw from their knowledge in completing the assignments.

TO THE STUDENT

Many excellent jobs are available for people with a good understanding of AutoCAD. While the textbook contains complete explanations of all the commands, nothing can take the place of practice. To become proficient in AutoCAD, you must continually work with

the program and refine your skills. AutoCAD is a complicated software package. Many have likened AutoCAD to learning a foreign language. In order to understand its commands and nuances, you must practice it daily.

The Review exercises are designed to make you think. After class, try to answer each one without looking back at your notes or the book. Then, verify your answer with the text. Most of the Review items are quite simple, especially if you have done the reading and listened to the lecture.

Complete the Unit Tutorials. The tutorials present a step-by-step method for utilizing a command or feature. Often a tutorial will highlight different methods of using a command. Completing the tutorials will give you a more rounded view of AutoCAD in addition to valuable practice. If you have questions, ask your instructor for additional help.

HAVE FUN! AutoCAD is fun. You will receive great satisfaction when you figure out how to use a command or how to create a complex object or shape. Follow these steps and we are sure that your experience with AutoCAD will be a pleasurable and rewarding one.

ACKNOWLEDGMENTS

We would like to thank the following individuals for their assistance during this project. To the team at Prentice Hall: Stephen Helba—Thanks for the trip to New Jersey and the opportunity to pitch our idea. Kim Gundling—Thank you for always checking up on us. While we know this is your job, you always did so in a way that seemed more like a personal conversation rather than a business call. Heidi Lobecker—Keep that Web page going! Without you and your team, we would not have all of the neat high-tech accessories that accompany this text. Patty Kelly—Thanks for overseeing our layout for the text and workbooks. You were a wonderful liaison with bookworks. At bookworks we would like to thank Lisa Garboski and her team for the timely layout of our manuscript. Eye appeal is a must, and we must say that you have done a wonderful job.

We would also like to thank Dixie Endsley for taking on the tough job of technical review. Your attention to detail was just what this manuscript needed. Just remember, if anything is wrong, it's your fault!

Mr. Combs would like to thank Wendy Bowles at Prentice Hall. You have to be the hardest-working "Book Rep." Thanks for lunch and for the great ideas. Thanks are also in order for Mary Kissinger. Thanks for taking all of my messages and helping me stay organized. You do a great job!

I would especially like to thank my wife Elizabeth. I spent many hours away from you while preparing this text and I promise to make each and every one of them up to you. You truly are a wonderful and supportive wife. Thanks for all of your help in collaborating on unit assignments, reviewing manuscript, making tedious editing corrections, screen captures, and providing me with excellent feedback. They say "behind every great man is an even better woman." They must have been talking about you! We are two halves . . .

I dedicate this book to my daughter Katherine. Although you are too young to read this now, thanks for being the best daughter a father could have, "pea pie."

Steven B. Combs, Ivy Tech State College, Evansville, Indiana

scombs@ivy.tec.in.us

Dr. Zirbel would like to thank his wife, Krissy, and two boys, Cory and Cody. Writing a textbook is not a trivial undertaking, and I could never accomplish such a task without your support and understanding.

Dr. Jay H. Zirbel, Murray State University, Murray, Kentucky

jay.zirbel@murraystate.edu

INTRODUCTION	309
OUTLINE	310
INDICATING LOCATIONS WITH POINT	310
	Selecting the Point Style 311
	Setting the Point Size (pdmode) 311
	Setting Point Size Relative to Screen Size 311

Setting Point Size to an Absolute Unit 312

DIVIDING AND MEASURING AN OBJECT 312

Dividing Objects into Equal Segment 312

Using Divide to Insert Objects 313

Measuring an Object (measure) 314

Using measure to Insert Objects 316

TUTORIAL 12.1: DRAWING A STAIR ELEVATION 316

DRAWING RINGS, SOLID-FILLED CIRCLES, AND ELLIPSES 320

Drawing Ellipses (Ellipse) 320

Defining Endpoints and Distances 322

Defining Endpoints and Rotation 322

Defining Center and Axis Point 323

Defining an Ellipse Arc 324

TUTORIAL 12.2: CREATING A BATHROOM SINK SYMBOL 325

DRAWING INFINITE LINES AND FREE HAND DRAWINGS 326

Drawing Infinite Lines (xline) 327

Drawing Rays (ray) 331

Creating Freehand Drawings (sketch) 332

TUTORIAL 12.3: SKETCHING YOUR INITIALS WITH THE SKETCH COMMAND 333

WORKING WITH MULTILINES 334

Defining Multiline Styles (mlstyle) 334

Creating Multilines 337

TUTORIAL 12.4: CREATING MULTILINE STYLES WITH MLSTYLE 338

TUTORIAL 12.5: DRAWING MULTILINES 341

Editing Multilines 342

TUTORIAL 12.6: ADDING VERTICES TO A MULTILINE 350

TUTORIAL 12.7: REMOVING
MULTILINE SECTIONS 351

TUTORIAL 12.8: MAKING
MULTILINE CORNERS 353

USING POLYLINES 354

Polyline Options 355

Polyline Arc Options 356

TUTORIAL 12.9: DRAWING
POLYLINES USING THE LINE AND
ARC OPTION 357

Drawing Boundary Polylines 358

TUTORIAL 12.10: CREATING A
BOUNDARY 360

Editing Polylines 361

Closing or Opening a Polyline
(pedit close and open) 362

Joining Polylines (pedit join) 362

Setting Polyline Width (pedit
width) 362

Curving and decurving
Polylines 362

Spline Linetype Generation (pedit
ltype gen) 364

Changing the Last pedit (pedit
undo) 365

Editing Polyline Vertices (pedit
edit vertices) 365

TUTORIAL 12.11: MODIFYING A
POLYLINE'S VERTICES 367

EXERCISE TWELVE 368

UNIT 13 DIMENSIONING A DRAWING 371

OVERVIEW 371

OBJECTIVES 371

INTRODUCTION 371

OUTLINE 372

DIMENSIONING BASICS AND DIMEN-
SIONING WITH PRECISION 372

Parts of Dimension 373

Standards Organization 374

Associative and Non-Associative
Dimensions 374

Creating Dimension Styles 375

TUTORIAL 13.1: CREATING A
DIMENSION STYLE AND CHANGING
THE DIMENSION GEOMETRY 379

TUTORIAL 13.2: CHANGING THE
DIMENSION LINE FORMAT 383

TUTORIAL 13.3: CHANGING THE
DIMENSION TEXT FORMAT 385

LINEAR AND RADIAL
DIMENSIONING 386

Linear Dimensions 386

Aligned Dimensions 387

TUTORIAL 13.4: CREATING
LINEAR DIMENSIONS 388

Continued Dimension Strings 389

TUTORIAL 13.5: CREATING
ALIGNED DIMENSIONS 390

TUTORIAL 13.6: ADDING
CONTINUED AND BASELINE
DIMENSIONS 391

Radial Dimensions 393

TUTORIAL 13.7: ADDING
RADIUS AND DIAMETER
DIMENSIONS 394

ANGULAR DIMENSIONS 395

Angular Dimensions 395

EDITING DIMENSIONS 396

Relocating and Rotating
Dimension Text 396

TUTORIAL 13.8: ADDING
ANGULAR DIMENSIONS 397

Modifying Dimensions and
Dimension Text 398

Modifying the Dimension Object
Using Object Grips 398

TUTORIAL 13.9: MODIFYING
DIMENSIONS 399

ADDITIONAL DIMENSIONING
FEATURES 400

Oblique Dimensions 401

Leaders 401

TUTORIAL 13.10: ADDING
LEADERS 402

REVIEW 403

EXERCISE THIRTEEN 403

UNIT 14	MODIFYING OBJECT CHARACTERISTICS AND EXTRACTING INFORMATION FROM YOUR DRAWING	407
	OVERVIEW	407
	OBJECTIVES	407
	INTRODUCTION	407
	OUTLINE	408
	MODIFYING OBJECT PROPERTIES	408
	Selecting Multiple Objects for Modification	408
	Changing Color and Linetype	409
	Moving the Object to a Different Layer	409
	Adjusting the Linetype Scale	409
	TUTORIAL 14.1: USING THE CHANGE PROPERTIES DIALOG BOX	410
	Changing Object Characteristics (ddmodify)	410
	Setting Default Object Properties with a Dialog Box	416
	TUTORIAL 14.2: USING THE MODIFY DIALOG BOX	417
	Editing Text	418
	Renaming Object Traits	419
	Removing Unwanted Objects	420
	TUTORIAL 14.3: MODIFYING OBJECT CHARACTERISTICS	420
	EXTRACTING INFORMATION FROM YOUR DRAWING	422
	Listing the Status of AutoCAD (status)	422
	TUTORIAL 14.4: LISTING THE STATUS OF A FILE	423
	Listing Object Information	424
	TUTORIAL 14.5: LISTING THE OBJECT OF A FILE	425
	TUTORIAL 14.6: USING THE DIST COMMAND	426
	TUTORIAL 14.7: USING THE ID COMMAND	428
	Calculating Area	428
	Finding Area	428

TUTORIAL 14.8:	USING THE AREA COMMAND	429
	Adding and Subtracting Features	430
TUTORIAL 14.9:	USING THE AREA COMMAND	430
	Keeping Track of Time	431
TUTORIAL 14.10:	USING THE TIME COMMAND	432

EXERCISE FOURTEEN		434
USING SYMBOLS AND ATTRIBUTES		437
OVERVIEW		437
OBJECTIVES		437
INTRODUCTION		437
OUTLINE		438
USING GROUPS		438
	Using Blocks to Represent Symbols	439
TUTORIAL 15.1:	CREATING A BATHTUB SYMBOL;	441
	Listing Blocks in the Current Drawing	442
TUTORIAL 15.2:	USING BLOCKS WITH THE ? OPTION	443
	Creating Blocks on Layer O	443
	Using Layers to Create Blocks	443
	Using Byblock with Blocks	444
TUTORIAL 15.3:	USING WBLOCK TO CREATE A DOOR SYMBOL	445
TUTORIAL 15.4:	INSERTING SYMBOLS INTO A DRAWING	448
ADDING INFORMATION TO BLOCKS WITH ATTRIBUTES		452
	Defining an Attribute	453
	Attribute Tag, Prompt, and Value	453
	Attribute Mode Settings	454
	Attribute Insertion Point Settings	454
	Attribute Text Options	455

TUTORIAL 15.5: DEFINING AND
INSERTING AN ATTRIBUTE 456

Using Ddate to Edit Attributes in
a Block 458

Editing Attributes with Attedit 458

Editing Attributes one at a time
with Attedit 459

Editing Attributes Globally with
Attedit 460

TUTORIAL 15.6: CHANGING
THE ATTRIBUTES DISPLAY
SETTING 461

TUTORIAL 15.7: REFINING
ATTRIBUTES WITH
ATTREDEF 464

Creating a Template File 465

Extracting Information 466

TUTORIAL 15.8: EXTRACTING
ATTRIBUTE DATA 467
