A high-magnification microscopic image of skin tissue, likely a histological section. The image shows a dense population of cells, with many having prominent, dark, circular nuclei. The overall color palette is a range of browns and oranges, from deep, dark tones to lighter, more yellowish-brown areas, suggesting a stained tissue sample. The texture is granular and complex, with various cellular structures visible.

### NOTICE

Medicine is an ever-changing science. As new research and clinical experience broaden our knowledge, changes in treatment and drug therapy are required. The editors and the publisher of this work have made every effort to ensure that the drug dosage schedules herein are accurate and in accord with the standards accepted at the time of publication. The reader is advised, however, to check the product information sheet included in the package of each drug he plans to administer to be certain that changes have not been made in the recommended dose or in the contraindications for administration. This recommendation is of particular importance in regard to new or infrequently used drugs.

## ACKNOWLEDGMENTS

In addition to the 143 contributors, there have been many individuals involved in the preparation of this book. The Editors would like to commend Mrs. Patricia K. Novak of Boston for her invaluable help in the preparation of this text for publication. The complexities of assembling the material from all the contributors were handled by her with ease and efficiency, facilitating the task for the Editors and producing a uniformity of technical style.

Most of the chapters were read by several members of the Staff and several Residents in Dermatology at the Harvard Medical School, particularly Drs. Ervin H. Epstein, Jr., Michael Fisher, B. Allen Flaxman, Gerald C. Goldman, Lowell A. Goldsmith, David P. Johnson, James T. Kalivas, Andrew Simone, and Mary Skinner.

We are indebted to our numerous medical colleagues for constant encouragement and advice regarding specific portions of the book. Dr. Geoffrey B. Dowling, Dr. Hugh Wallace, and Professor Samuel Shuster of London, Dr. George H. Findlay of Pretoria, South Africa, and Dr. Irvin H. Blank of Boston reviewed the section on "Dermatology in the Perspective of General Medicine" in Chapter 1. Drs. Nicholas J. Fiumara, Edward S. Murray, Thomas C. Peebles, David S. Feingold, and Arnold N. Weinberg, all of Boston, gave valuable assistance in the preparation of "An Atlas of Rashes Occurring in the Acutely Ill Febrile Patient" in Chapter 2. Dr. Marian W. Ropes, Physician at the Massachusetts General Hospital, made many helpful suggestions in the section on "Lupus Erythematosus" in Chapter 22. Dr. Jacob H. Swartz, Physician at Massachusetts General Hospital, critically reviewed the section on "Superficial Mycotic Infections" in Chapter 24. Dr. Walter F. Lever, Professor of Dermatology and Chairman of the Department, Tufts University School of Medicine, reviewed the section on "Pustular Eruptions of the Palms and Soles" in Chapter 8.

We are especially indebted to Pamela Berglund and Sidney J. Rosenthal of Arrco Medical Art & Design, Inc., for the preparation of illustrations, especially the halftones in Chapter 2. All of the unacknowledged color and the black and white photographs were taken by Mr. John Charles, Photographer of the Department of Dermatology, Harvard Medical School. Dr. Masamitsu Miyamoto, of Tokyo, gave expert advice to the Japanese print-

ers in the arrangement and color corrections of the color plates.

The large number of photographs, both the color and the black and white, were made possible through the generosity of the following:

Burroughs Wellcome & Co. (U.S.A.) Inc.  
CIBA Pharmaceutical Company  
Dome Laboratories, Division Miles Laboratories, Inc.  
Duke Laboratories, Inc.  
Johnson & Johnson  
Owen Laboratories Incorporated  
The Procter & Gamble Company  
Roche Laboratories, Division of Hoffman-La Roche Inc.  
E. R. Squibb & Sons, Inc.  
Syntex Laboratories, Inc.  
Texas Pharmacal Company  
Westwood Pharmaceuticals

The index was compiled by a team of physicians with the guidance and assistance of Miss Maureen Clegg. Drs. Kenneth A. Arndt and John A. Parrish organized and implemented this work and were aided by the following Residents in Dermatology at the Harvard Medical School: Drs. Gary Brauner, Jean-Pierre DesGroseilliers, Michael Greenwald, Terry Hadley, Michael Jarratt, Paul Kechijian, Sheldon Pinnell, and Michael Pugliese.

We wish to express our gratitude to the secretarial staff of the Department of Dermatology, Massachusetts General Hospital, for their assistance in the preparation of the manuscripts.

We wish to acknowledge the cooperation of the McGraw-Hill Book Company staff, especially Messrs. Stuart Boynton, Eugene Capriotti, John Harte, and Paul Schneider, and of Wladislaw Finne, for their numerous helpful suggestions during the preparation of the book.
