West's Commitment to the Environment

In 1906, West Publishing Company began recycling materials left over from the production of books. This began a tradition of efficient and responsible use of resources. Today, 100% of our legal bound volumes are printed on acid-free, recycled paper consisting of 50% new paper pulp and 50% paper that has undergone a de-inking process. We also use vegetable-based inks to print all of our books. West recycles nearly 27,700,000 pounds of scrap paper annually—the equivalent of 229,300 trees. Since the 1960s, West has devised ways to capture and recycle waste inks, solvents, oils, and vapors created in the printing process. We also recycle plastics of all kinds, wood, glass, corrugated cardboard, and batteries, and have eliminated the use of polystyrene book packaging. We at West are proud of the longevity and the scope of our commitment to the environment.

West pocket parts and advance sheets are printed on recyclable paper and can be collected and recycled with newspapers. Staples do not have to be removed. Bound volumes can be recycled after removing the cover.

Production, Prepress, Printing and Binding by West Publishing Company.

A Word about Photomicrographs

The photomicrographs in the textbook were made of recrystallized vitamins and other nutrients using a variety of different techniques. Many vitamins can be imaged using the melt-recrystallization process where a few milligrams of the chemical are sandwiched between a microscope coverslip and slide, then heated until melted and allowed to slowly recrystallize. Alternately, for vitamin-salts that will not melt, the chemical is dissolved in a suitable solvent (water or alcohol) and a few microliters of solution are allowed to slowly evaporate between a microscope slide and coverslip. Upon recrystallization, the vitamins are viewed in a microscope using cross-polarized illumination where the crystallites diffract light depending both on the molecular orientation within the crystal and the crystal thickness. The colorful patterns illustrated in this text are a manifestation of both molecular orientation and crystal thickness.

This seventh edition of *Understanding Nutrition* shares the same goals established almost twenty years ago in writing the first edition: to provide a textbook that would both reveal the fascination of the science of nutrition and share the fun and excitement of nutrition with the reader. Readers want more than just facts—they want an understanding of how the scientific facts apply to their daily lives. While the goals for this edition remain unchanged, every chapter has been substantially revised to reflect the many changes that have occurred in the field of nutrition over the years.

This book presents the core information of an introductory nutrition course. Chapter 1 wastes no time in exploring why we eat the foods we do and continues with a brief overview of the nutrients, the science of nutrition, recommended nutrient intakes, assessment, and important relationships between diet and health. Chapter 2 describes the diet-planning principles and food guides used to create diets that support good health and includes instructions on how to read a food label. In Chapter 3, readers follow the journey of digestion and absorption as the body transforms foods into nutrients. Chapters 4 through 6 describe carbohydrates, fats, and proteins—their chemistry, health effects, roles in the body, and places in the diet. Then Chapter 7 shows how the body derives energy from these three nutrients. Chapters 8 and 9 continue the story with a look at energy balance, the factors associated with overweight and underweight, and the benefits and dangers of weight loss and weight gain. Chapters 10 through 13 complete the introductory lessons by describing the vitamins, the minerals, and water—their roles in the body, deficiency and toxicity symptoms, and sources.

The next seven chapters weave that basic information into practical applications, showing how nutrition influences people's lives. Chapter 14 describes how physical activity and nutrition work together to support health. Chapters 15, 16, and 17 present the special nutrient needs of people through the life cycle—pregnancy and lactation; infancy, childhood, and adolescence; and adulthood and the later years. Chapter 18 focuses on the dietary risk factors and recommendations associated with chronic diseases, and Chapter 19 addresses consumer concerns about the safety of the food and water supply. Chapter 20 closes the book with a look at hunger and global environmental problems and offers suggestions for establishing sustainable foodways.

To the person reading this text, it will be obvious that, like most sciences, nutrition possesses no absolute certainties. Nutrition scientists simply do not have all the answers yet; in some cases, we have not even asked all the questions yet. This is true in many areas of nutrition; it is a growing, young science dating only from around the turn of the century. One of the missions of this text, beginning in Chapter 1, is to show readers how researchers ascertain the “facts.”

Many of the chapters in this edition include “How To” skill boxes that guide readers through problem-solving tasks. For example, a box in Chapter 1 shows readers how to calculate energy intake from the grams of carbohydrate, fat, and protein in a food; another box in Chapter 13 describes how to calculate iron absorption from a meal.

New to this edition are summary paragraphs, marked with a thin blue bar in the margin. These paragraphs review the contents of the previous section; in some chapters, such as those covering the vitamins and minerals, summaries appear in tables.

Also featured in this edition are the Healthy People 2000 nutrition-related priorities, which are presented wherever their subjects are discussed (Appendix G presents them in full). Healthy People 2000 is a report developed by the U.S. Department of Health and Human Services that establishes national objectives in health promotion and disease prevention for the year 2000.

Each chapter closes with study questions, and many chapters include problem sets. Study questions offer readers the opportunity to review the major concepts presented in the chapters. Problem sets present simple nutrition-related calculations that will prove many of the concepts introduced in the chapter (answers appear in Appendix K).

Highlights on current issues of interest alternate with the chapters. Each highlight provides readers with a brief look at a topic that relates to its companion chapter. New highlights in this edition explore healthy ethnic cuisines (including the Mediterranean diet), the fattening power of fat, the roles of antioxidant nutrients and nonnutrients in disease prevention, childhood obesity and its influence on the early development of chronic diseases, and nutrient-drug interactions.

The appendixes are valuable references for a number of purposes. Appendix A summarizes background information on the hormonal and nervous systems, complementing Appendixes B and C on basic chemistry, the chemical structures of nutrients, and major metabolic pathways. Appendix D assists readers with calculations and conversions. Appendix E provides detailed coverage on nutrition assessment, and Appendix F lists nutrition resources, including book and journal recommendations as well as addresses. Appendix G presents the Recommended Dietary Allowances (1989 RDA), the Daily Values for food labels, the nutrition-related priorities of Healthy People 2000, the United States Exchange System, and recommendations from the World Health Organization (WHO). Appendix H is a 2000-item food composition table made from the latest nutrient data base assembled by ESHA Research, Inc., of Salem, Oregon. Appendix I presents information for Canadians: the Recommended Nutrient Intakes (1990 RNI), the Exchange System, and instructions on reading food labels. Appendix J describes measures of protein quality and Appendix K presents the answers to the problem sets that appear at the ends of chapters.

We have tried to keep the number of footnotes to a minimum. Many statements that have appeared in previous editions with footnotes now appear without them, but every statement is backed by research, and the authors will supply references upon request. We have not provided a separate list of suggested readings, but have tried to include references that will provide readers with additional details or a good overview of the subject.

We hope our informal, conversational writing style makes the study of nutrition an enjoyable experience. Nutrition is a fascinating subject, and we hope our enthusiasm for it comes through on every page.

Eleanor Noss Whitney
Sharon Rady Rolfes
December 1995

Acknowledgments

To produce a book requires the coordinated effort of a team of people—and, no doubt, each team member has another team of support people as well. We salute, with a big round of applause, everyone who has worked so diligently to ensure the quality of this book.

We thank Linda DeBruyne and Yvonne Jones for their valuable contributions to the fitness and hunger chapters, respectively. A million thank yous to Mary Ann Riveccio for her patient attention to manuscript preparation, permissions, and a multitude of other daily tasks. We thank Diane Dziekan for her assistance on the Problem Sets; Sabrina McGriff for her attention to bookkeeping tasks; and Sally Lorch for her help around the office. To Linda Patton, a special thank you for her skilled assistance in library research. We also thank the many people who have prepared the ancillaries that accompany this text: Harry Sitren for writing and enhancing the Test Bank; Lori Turner, Mary Rhiner, and Margaret Hedley for preparing the Instructor's Manual, and Judy Kaufman for providing video disc references in the manual; and Lori Turner for authoring the Student Study Guide. A big

thank you to Elizabeth Hands, Bob Geltz, and their staff at ESHA for their meticulous effort in creating the food composition appendix, verifying the data in figures and tables, and developing the computerized diet analysis program that accompanies this book. Our special thanks to the editorial team of Peter Marshall, Becky Tollerson, and Kara ZumBahlen for their conscientious coordination of reviews and production. We also thank John Woolsey and his associates for creating accurate and attractive artwork to complement our writing; Michael Davidson for transforming nutrients into outstanding works of art that grace the cover and chapter opening pages; Tom Harm and Tom Peterson for photographing foods beautifully; and Pat Lewis for copyediting thousands of pages of manuscript. To the many others involved in designing, indexing, typesetting, dummies, and marketing, we tip our hats in appreciation.

We are especially grateful to our associates, friends, and families for their continued encouragement and support. We also thank our many reviewers for their comments and contributions.

Preface xvii

Chapter 1

An Overview of Nutrition 1

- Food Choices 2
- Introducing the Nutrients 4
 - The Six Classes of Nutrition 4
 - How to Think Metric* 6
 - The Energy-Yielding Nutrients 6
 - How to Calculate the Energy Available from Foods* 8
 - The Vitamins 10
 - The Minerals 10
 - Water 10
- The Science of Nutrition 11
 - Nutrition Research 11
 - Research Versus Rumors 14
- Recommended Nutrient Intakes 14
 - Recommended Dietary Allowances (RDA) 15
 - Setting the RDA for Vitamins and Minerals 16
 - Using the RDA 18
- Nutrition Assessment 20
 - Nutrition Assessment of Individuals 21
 - Nutrition Assessment of Populations 23
- Diet and Health 24
 - Risk Factors 24
 - Dietary Recommendations 26
- Problem Set 29
-  HIGHLIGHT ONE: Who Speaks on Nutrition? 31

Chapter 2

Planning a Healthy Diet 38

- Principles and Guidelines 39
 - Diet-Planning Principles 39
 - Dietary Guidelines for Americans 41
- Diet-Planning Guides 42
 - Food Group Plans 42
 - Exchange Lists 47
 - Combining Food Group Plans and Exchange Lists 51
 - From Guidelines to Groceries 55
- Food Labels 59
 - The Ingredient List 61

- Serving Sizes 62
- Nutrition Facts 62
- The Daily Values 63
- How to Calculate Personal Daily Values* 65
- Descriptive Terms 65
- Health Claims 67
- Consumer Education 69
- Problem Set 70
-  HIGHLIGHT TWO: Ethnic Cuisines and Healthy Choices 73

Chapter 3

Digestion, Absorption, and Transport 81

- Digestion 82
 - Anatomy of the Digestive Tract 82
 - The Muscular Action of Digestion 86
 - The Secretions of Digestion 88
 - The Final Stage 90
- Absorption 91
 - Anatomy of the Absorptive System 93
 - A Closer Look at the Intestinal Cells 93
- The Circulatory Systems 96
 - The Vascular System 96
 - The Lymphatic System 100
- Regulation of Digestion and Absorption 100
 - Gastrointestinal Hormones and Nerve Pathways 100
 - The System at Its Best 102
-  HIGHLIGHT THREE: Common Digestive Problems 104

Chapter 4

The Carbohydrates: Sugars, Starch, and Fibers 111

- The Chemist's View of Carbohydrates 112
- The Simple Carbohydrates 113
 - Monosaccharides 113
 - Dissaccharides 115

Contents

The Complex Carbohydrates	117
Glycogen	117
Starch	118
The Fibers	118
Digestion and Absorption of Carbohydrates	121
The Processes of Digestion and Absorption	121
Lactose Intolerance	125
Glucose in the Body	126
A Preview of Carbohydrate Metabolism	126
The Constancy of Blood Glucose	128
Health Effects and Recommended Intakes of Sugars	131
Health Effects of Sugars	132
Accusations against Sugars	135
Recommended Intakes of Sugars	135
Health Effects and Recommended Intakes of Starch and Fibers	136
Health Effects of Starch and Fibers	136
Recommended Intakes of Starch and Fiber	138
How to Use the Exchange System to Estimate Carbohydrate	140
Problem Set	144
 HIGHLIGHT FOUR: Alternatives to Sugar	146

Chapter 5

The Lipids: Triglycerides, Phospholipids, and Sterols 153

The Chemist's View of Triglycerides and Fatty Acids	154
The Fatty Acids	155
Fats in Foods	158
Roles of Triglycerides and Fatty Acids	161
Essential Fatty Acids	161
The Chemist's View of Phospholipids and Sterols	164
The Phospholipids	164
The Sterols	165
Digestion, Absorption, and Transport of Lipids	167
Lipid Digestion	167
Lipid Absorption	170

Lipid Transport	172
Lipids in the Body	173
Triglycerides in the Blood	173
A Preview of Lipid Metabolism	173
Health Effects and Recommended Intakes of Lipids	176
Health Effects of Lipids	177
Recommended Intakes of Fat	180
How to Lower Fat Intake—by Food Group	181
How to Use the Exchange System to Estimate Fat	184
How to Calculate a Personal Daily Value for Fat	186
Problem Set	190
 HIGHLIGHT FIVE: Alternatives to Fat	193

Chapter 6

Protein: Amino Acids 196

The Chemist's View of Proteins	197
Amino Acids	197
Proteins	199
Digestion and Absorption of Protein	201
The Process of Digestion	201
The Process of Absorption	201
Proteins in the Body	203
Protein Synthesis	203
Roles of Proteins	205
A Preview of Protein Metabolism	210
Protein in Foods	212
Protein Quality	213
Measures of Protein Quality	214
Protein Regulations for Food Labels	215
Health Effects and Recommended Intakes of Protein	216
Protein-Energy Malnutrition	216
Health Effects of Protein	219
Recommended Intakes of Protein	220
How to Calculate Recommended Protein Intakes	221
Protein and Amino Acid Supplements	222
How to Use the Exchange System to Estimate Protein	223
Problem Set	226
 HIGHLIGHT SIX: Vegetarian, Mediterranean, and Other Meat-Restricted Foodways	229

Chapter 7

Metabolism: Transformations and Interactions 238

Chemical Reactions in the Body	239
--------------------------------	-----

Breaking Down Nutrients for Energy	244
Glucose	244
Glycerol and Fatty Acids	249
Amino Acids	251
The Final Steps of Catabolism	254
The Body's Energy Budget	258
The Economics of Feasting	259
The Transition from Feasting to Fasting	260
The Economics of Fasting	260
 HIGHLIGHT SEVEN: Alcohol and Nutrition	265

Chapter 8

Energy Balance and Body Composition 276

Energy Balance	277
Energy In: The kCalories in Food	278
Food Composition	278
Food Intake	278
Energy Out: The kCalories the Body Spends	281
Components of Energy Expenditure	282
Estimating Energy Requirements	285
Body Weight, Body Composition, and Health	286
How to Estimate Energy Output	287
Defining Healthy Body Weight	288
Body Weight and Its Standards	288
Body Fat and Its Distribution	291
Health Risks Associated with Body Weight and Body Fat	294
Problem Set	298
 HIGHLIGHT EIGHT: The Fattening Power of Fat	300

Chapter 9

Weight Control: Overweight and Underweight 306

Causes of Obesity	307
Fat Cell Development	307
Genetics	308
Fat Cell Metabolism	309
Set-Point Theory	309
Overeating	310
Inactivity	310
Controversies in Obesity Treatment	311
Treatments of Obesity: Poor Choices	313
Dangers of Weight Loss	313
Pills, Procedures, and Other Possibilities	314

How to Identify Unsound Weight-Loss Schemes and Diets	315
Very-Low-kCalorie Diets	318
Treatments of Obesity: Good Choices	320
Eating Plans	320
Physical Activity	322
Behavior and Attitude	324
How to Apply Behavior-Modification Strategies to Weight Loss	326
Underweight	328
Problems of Underweight	328
Weight-Gain Strategies	329
Problem Set	331
 HIGHLIGHT NINE: Eating Disorders—Anorexia Nervosa and Bulimia Nervosa	335

Chapter 10

The Water-Soluble Vitamins: B Vitamins and Vitamin C 344

The Vitamins—An Overview	345
The B Vitamins—As Individuals	347
Thiamin	348
Riboflavin	349
How to Look to Foods for Single Nutrients	350
Niacin	353
How to Determine Niacin Intake	356
Biotin	356
Pantothenic Acid	358
Vitamin B ₆	359
Folate	361
How to Understand Dose Levels and Effects	362
Vitamin B ₁₂	366
Vitamin Impostors	369
The B Vitamins—In Concert	371
B Vitamin Interactions	373
B Vitamin Deficiencies	373
How to Distinguish Symptoms and Causes	374
B Vitamin Toxicities	375
B Vitamin Food Sources	375

Contents

- Vitamin C 375
 - Vitamin C Roles 376
 - Vitamin C Recommendations 378
 - Vitamin C Deficiency 378
 - Vitamin C Toxicity 380
 - Vitamin C Food Sources 381
- Problem Set 384
-  HIGHLIGHT TEN: Vitamin and Mineral Supplements 387

Chapter 11

The Fat-Soluble Vitamins: A, D, E, and K 393

- Vitamin A and Beta-Carotene 394
 - Roles in the Body 394
 - Vitamin A Recommendations 399
 - Vitamin A Deficiency 399
 - Vitamin A Toxicity 402
 - Vitamin A in Foods 403
- Vitamin D 406
 - Roles in the Body 406
 - Vitamin D Deficiency 407
 - Vitamin D Toxicity 407
 - Vitamin D Recommendations and Sources 409
- Vitamin E 410
 - Vitamin E as an Antioxidant 410
 - Vitamin E Deficiency 412
 - Vitamin E Toxicity 412
 - Vitamin E Recommendations 412
 - Vitamin E in Foods 413
- Vitamin K 413
 - Vitamin K Deficiency 415
 - Vitamin K Toxicity 415
 - Vitamin K Recommendations and Sources 416
- The Fat-Soluble Vitamins—In Summary 416
- Problem Set 419
-  HIGHLIGHT ELEVEN: Antioxidant Nutrients and Nonnutrients in Disease Prevention 421

Chapter 12

Water and the Major Minerals 429

- Water and the Body Fluids 430
 - Water Balance and Recommended Intakes 430
 - Blood Volume and Blood Pressure 432
 - Fluid and Electrolyte Balance 433
 - Fluid and Electrolyte Imbalance 436
 - Acid-Base Balance 437
- The Minerals—An Overview 439
- Sodium 440
 - How to Cut Salt Intake* 442
- Chloride 444
- Potassium 445
- Calcium 447
 - Calcium Roles in the Body 448
 - Calcium Recommendations and Intakes 450
 - Calcium Deficiency 453
- Phosphorus 454
- Magnesium 455
- Sulfur 456
- Problem Set 459
-  HIGHLIGHT TWELVE: Osteoporosis and Calcium 462

Chapter 13

The Trace Minerals 472

- The Trace Minerals—An Overview 473
- Iron 474
 - Iron Roles in the Body 474
 - Iron Absorption and Metabolism 475
 - How to Calculate Iron Absorbed from Meals* 477
 - Iron Deficiency 478
 - Iron Toxicity 482
 - Iron Recommendations and Intakes 483
 - How to Estimate the Recommended Daily Intake for Iron* 484
 - Contamination and Supplemental Iron 484
- Zinc 486
 - Zinc Roles in the Body 486
 - Zinc Absorption and Metabolism 487
 - Zinc Deficiency 489
 - Zinc Toxicity 489
 - Zinc Recommendations and Intakes 491
 - Contamination and Supplemental Zinc 491
- Iodine 491
- Selenium 494

Copper	495
Manganese	496
Fluoride	497
Chromium	498
Molybdenum	499
Other Trace Minerals	499
Closing Thoughts on the Nutrients	500
Problem Set	502
 HIGHLIGHT THIRTEEN: Putting It All Together— Appraising Two Days' Meals	505

Chapter 14

Fitness: Physical Activity, Nutrients, and Body Adaptations 509

Fitness	511
Three Definitions of Fitness	511
Fitness and Its Benefits	512
The Components of Fitness	513
Conditioning by Training	513
Cardiorespiratory Endurance	515
The Female Athlete Triad	517
Energy Systems, Fuels, and Nutrients to Support Activity	519
The Energy Systems of Physical Activity—ATP and PC	519
Glucose Use during Physical Activity	520
<i>How to Maximize Glycogen Stores: Carbohydrate Loading</i>	524
Fat Use during Physical Activity	524
Protein Use during Physical Activity—and between Times	526
Vitamins and Minerals to Support Activity	529
Fluids and Electrolytes to Support Activity	530
Poor Beverage Choices: Caffeine and Alcohol	532
<i>How to Evaluate Sports Drinks</i>	533
Diets for Physically Active People	534
Choosing a Diet to Support Fitness	534
Meals before and after Competition	535
 HIGHLIGHT FOURTEEN: Supplements and Ergogenic Aids Athletes Use	540

Chapter 15

Life Cycle Nutrition: Pregnancy and Lactation 547

Growth and Development during Pregnancy	548
---	-----

Placental Development	548
Fetal Growth and Development	548
Critical Periods	549
Maternal Weight	551
Weight for Height Prior to Conception	551
Weight Gain and Exercise during Pregnancy	552
Nutrition during Pregnancy	554
Energy and Nutrient Needs during Pregnancy	554
Common Nutrition-Related Concerns of Pregnancy	558
High-Risk and Low-Risk Pregnancies	559
<i>Food Assistance Programs for Pregnant Women, Infants, and Children</i>	560
Malnutrition and Pregnancy	560
The Infant's Birthweight	561
The Mother's Health Status	561
Adolescent Pregnancy	563
Practices Incompatible with Pregnancy	564
Nutrition during Lactation	566
Breastfeeding: A Learned Behavior	566
The Mother's Nutrient Needs	567
Concerns of Breastfeeding Mothers	569
 HIGHLIGHT FIFTEEN: Fetal Alcohol Syndrome	574

Chapter 16

Life Cycle Nutrition: Infancy, Childhood, and Adolescence 577

Nutrition during Infancy	578
Energy and Nutrient Needs	578
Breast Milk versus Infant Formula	579
Breast Milk	581
Infant Formula	583
Special Needs of Preterm Infants	585
Introducing First Foods	586
Mealtimes with Infants	589
Nutrition during Childhood	590

- Adverse Reactions to Foods 596
- Mealtimes at Home 597
- Nutrition at School 600
- Food Assistance Programs for Children 601
- Nutrition during Adolescence 602
 - Growth and Development 602
 - Energy and Nutrient Needs 603
 - Food Choices and Health Habits 604
 - Problems Adolescents Face 604
-  HIGHLIGHT SIXTEEN: Childhood Obesity and the Early Development of Chronic Diseases 610

Chapter 17

Life Cycle Nutrition: Adulthood and the Later Years 617

- Nutrition and Longevity 618
 - Observation of Elderly People 619
 - Manipulation of Diet 619
- The Aging Process 620
 - Physiological Changes 621
 - Other Changes 622
- Nutrient Needs of Older Adults 623
 - Water 623
 - Energy Needs and Activity 623
 - Vitamins and Minerals 625
 - Supplements for Older Adults 627
- Special Concerns of Older Adults 628
 - Cataracts and Arthritis 628
 - The Aging Brain 630
- Food Choices and Eating Habits of Older Adults 633
 - Nutrition Programs 633
 - Meals for Singles 633
 - Food Assistance Programs for Older Adults 635
-  HIGHLIGHT SEVENTEEN: Nutrient-Drug Interactions 640

Chapter 18

Diet and Health 645

- Heart Disease and Strokes 647
 - How Atherosclerosis Develops 648
 - Risk Factors for Cardiovascular Disease 649
 - Recommendations for Reducing Cardiovascular Disease Risk 652
 - How to Assess Your Heart Disease Risk 653
- Hypertension 655
 - Blood Pressure Regulation 656
 - How Hypertension Develops 657
 - Risk Factors for Hypertension 658
 - Recommendations for Reducing Hypertension Risk 658
- Cancer 660
 - How Cancer Develops 660
 - Risk Factors for Cancer 661
 - Recommendation for Reducing Cancer Risk 663
- Diabetes Mellitus 664
 - Complications of Diabetes 665
 - Dietary Recommendations for IDDM 667
 - Dietary Recommendations for NIDDM 667
- Putting It All Together 668
-  HIGHLIGHT EIGHTEEN: Nutrition, Immunity, and AIDS 671

Chapter 19

Consumer Concerns about Foods and Water 678

- Food-Borne Illnesses 680
 - Food-Borne Infections and Food Intoxications 681
 - Food Hazards in the Marketplace 682
 - Food Safety in the Kitchen 683
 - How to Prevent Food-Borne Illnesses 684
 - How to Achieve Food Safety while Traveling 687
 - Food Safety while Traveling 687
- Nutritional Adequacy of Foods and Diets 688
- Environmental Contaminants 688
 - Harmfulness of Environmental Contaminants 688
 - Examples of Environmental Contaminants 688
- Natural Toxicants in Foods 691
- Pesticides 692
 - How to Prepare Foods to Minimize Pesticide Residues 695

- Food Additives 696
 - Regulations Governing Additives 696
 - Intentional Food Additives 698
 - Indirect Food Additives 700
 - Hormones 702
 - Radiation 703
 - Food Biotechnology 704
- The Public Water Supply 706
 - Sources of Drinking Water 706
 - Drinking Water Contaminants 708
 - Water Systems and Regulations 708
-  HIGHLIGHT NINETEEN: Our Children's Daily Lead 712

Chapter 20

Hunger and Global Environmental Problems 717

- Defining the Problems 718
- Hunger in the United States 719
 - Who Are the Hungry in the United States? 723
 - How to Identify Food Insecurity in a U.S. Household* 723
 - Assistance Programs Aimed at Hunger and Adequate Nutrition 724
- World Hunger 725
- Environmental Degradation and Hunger 727
 - Environmental Problems and Food Production 727
 - Limitations in Food Production 729
- Poverty and Overpopulation 729
- Solutions 731
 - Sustainable Development Worldwide 731
 - Activism and Simpler Lifestyles at Home 733
 - Environmentally Conscious Foodways 734
 - Food Shopping 734
 - Cooking Food 739
 - Kitchen Appliances 740
 - Food Serving, Dish Washing, and Waste Disposal 742
-  HIGHLIGHT TWENTY: Progress toward Sustainable Agriculture 748

Appendix A

Cells, Hormones, and Nerves

Appendix B

Basic Chemistry Concepts

Appendix C

Biochemical Structures and Pathways

Appendix D

Aids to Calculation

Appendix E

Nutrition Assessment

Appendix F

Nutrition Resources

Appendix G

United States: Recommendations and Exchanges
World Health Organization: Recommendations

Appendix H

Table of Food Composition

Appendix J

Canada: Recommendations, Exchanges, and
Labels

Appendix J

Measures of Protein Quality

Appendix K

Answers to Problem Sets

Glossary
