PREFACE

The role and importance of the rubber-based industries in Malaysia need no longer be re-emphasized. For technical expertise, the services of the Rubber Research Institute of Malaysia have always been made available to the Rubber manufacturing industries whenever requested. In the process of maintaining and sustaining the technical advisory services, information systems have been established for supporting the activities. The RRIM has developed systems and methodologies for the establishment of information data systems or databases for effective access to information pertaining to the different disciplines relating to the Institute's requirement. One of the databases generated pertains to data on the Malaysian rubber product manufacturers in the country, and as an off-shoot of this system, this directory is published for general usage. The computer database contains extensive information and data on the rubber product manufacturers in the country though most of the information is meant only for internal use. However the Institute realised that there was also an urgent need for the industry to have access to some of the general information of this database. Since this database is fully computerized we have now been able to produce a directory with the basic data elements for public consumption. The directory can provide basic information on the individual rubber product manufacturers, the rubber products manufactured and also the distribution of the industries in the different states of the country. It can also serve as a useful guide to all associated with the rubber industry.

Database generation has always been a complicated process and it requires effective coordinating and contribution by the staff of the various Divisions of the Institute. Good teamwork approach has resulted in this piece of work and I would like to acknowledge the following staff for their effort and cooperation: Dr. Wan Idris bin Wan Yaacob, Dr. Yusof bin Aziz and En. Yee Yoke Thong from the Technical Advisory Services and Industrialization Unit, Dr. Teo Sen Chong from the Physics and Engineering

Division, En. Kaw Hun Woon and Puan Zainab bte. Saim from the Publications,
Library and Information Division and Puan Shirley Tan and Puan Peggy Lee
from the Central Computer Unit.

INTRODUCTION

The main objective of this publication is to provide easy reference to some of the basic information relating to the rubber product manufacturers in the country. The sources of information of this directory are from direct questionnaires as well as from other secondary published sources. Every effort has been made to ensure that the information provided is accurate and consistently laid out. However there are some entries without full details and these are generally obtained from secondary published sources.

As the directory is compiled as an off-shoot from the Technical Advisory Services of the RRIM, we do not claim total comprehensiveness of coverage. We will certainly appreciate being informed of any manufacturers being left out so that they can be included in future editions. Likewise we will appreciate from those listed in this directory for more complete listing if there are any shortcomings in the present listing.

The directory is arranged in three sections, one according to the manufacturers in alphabetical order, the second according to the products and the third according to the states, with each section providing varying coverage of information. The arrangement of this directory has been adopted to provide easy access to information by reference to the names of the manufacturers, the products manufactured or the distribution of the industry by the states.

No directory can be effective without the participation of those listed in the publication. To ensure improvement of this directory, we need the continuous support of all the manufacturers in the country to inform us of any omissions, additions and changes. The ultimate objective is to make this directory into a useful reference tool so that all those related to the rubber industry can benefit from it.
