## Editors' Introduction

I. Introduction to the Volume . . . . .	1
II. Report on the Conference . . . . .	2
III. Recommendations . . . . .	20
IV. Addresses and Papers . . . . .	27

## PART I ADDRESSES

### Opening Address

<i>Mrs J.R.H. Maij-Weggen</i> . . . . .	31
---	----

### Opening Address

<i>Jan Pronk</i> . . . . .	35
I. Introduction . . . . .	35
II. The World Market . . . . .	35
III. Prospects for the 1990s . . . . .	36
IV. Ports as Nodal Points in a Global Transport System . . . . .	37
V. Global Transport System . . . . .	38
VI. Transport and the Developing Countries . . . . .	38
VII. New Strategy . . . . .	39
VIII. Netherlands Maritime Aid . . . . .	40
IX. Conclusion . . . . .	40

### Concluding Remarks

<i>Elisabeth Mann Borgese</i> . . . . .	43
---	----

## CONTENTS

### PART II THEME: A GLOBAL TRANSPORT SYSTEM

#### Changes in the Patterns of World Trade

<i>Sheila Page</i> . . . . .	51
I. Introduction . . . . .	51
II. The International Trade Net . . . . .	52
III. Implications for Future Trade Patterns . . . . .	57
IV. Implications for Policy and for The Future . . . . .	60

#### Ports as Nodal Points in a Global Transport System

<i>W. Winkelmans</i> . . . . .	65
I. Introduction . . . . .	65
II. Globalization of the Economy . . . . .	66
III. New Trans- <i>port</i> Technologies . . . . .	70
IV. Transport and the Environment . . . . .	72
V. Globalization of Trans- <i>port</i> . . . . .	73
VI. Epilogue . . . . .	76

#### Ports as 'Nodal Points'

<i>F. Suykens</i> . . . . .	77
I. Ports as Transshipment Centres . . . . .	77
II. Port Management and Development . . . . .	78
III. Conclusions	

#### Efficiency in a Global Transport System

<i>James H. McJunkin</i> . . . . .	83
I. Definition of Efficiency . . . . .	83
II. Increased Efficiencies . . . . .	85
III. Ports . . . . .	86
IV. Ships . . . . .	88
V. Land Carriers . . . . .	89
VI. Summary . . . . .	89

**Equity and a Global Transport System**

*Costa R. Mahalu* . . . . . 91

I. The International Economic Order and Equity . . . . . 91

II. Developing Countries and the Global Transport System . . . 92

III. Equity and Shipping . . . . . 95

# Editors' Introduction

## I. Introduction to the Volume

This volume is the report on the Pacem in Maribus Conference on *Ports as 'Nodal Points' in the Global Transport System*, held in Rotterdam in the period 27-31 August 1990.

Pacem in Maribus (PIM), an initiative of the International Ocean Institute (IOI), is the name given to a series of international conferences dealing with the use and management of the world's oceans and their resources. The first PIM Conference was held in Malta, 'home' of IOI, in 1970, since when it has been followed by 17 conferences held at various locations, including vessels, around the world. IOI's conviction that the world's oceans should be viewed as the 'common heritage of mankind' and used and managed in the interests of all has meant that the special needs, problems and opportunities of the developing countries have always received special attention in annual PIM convocations. Conferences are frequently held in developing countries and are characteristically attended by participants from both the 'North' and 'South'.

While PIM has addressed many issues in ocean development over the past two decades, none of its conferences had focused on ports and, more specifically, on the role and position of ports in the global transport system. This apparent omission can in part be explained by the limited attention given to ports in the lengthy negotiation process that culminated in the adoption by most of the world's nations of the new Convention on the Law of the Sea, which IOI continuously sought to influence through its annual PIM convocations as well as its training, research and advisory work. The omission can nevertheless be considered surprising since ports are one of the principal interfaces between land and sea and the main entry and exit points in the global transport system that links the world's nations with more than 70 per cent of the earth's surface.

PIM XVIII had ports as 'nodal points' as its central theme. It was appropriately held in Rotterdam - the world's largest port - to coincide with the City's 650th anniversary celebrations. Erasmus University of Rotterdam cooperated with IOI in all aspects of the conference's design and organization. The conference's Preparatory Committee, which included representatives of not only IOI and Erasmus University but also the Netherlands Ministry of Transport and Public Works, the Port of Rotterdam, IMO, UNCTAD, UNIDO and the Netherlands

## EDITORS' INTRODUCTION

Institute for the Law of the Sea (NILOS), was specifically entrusted with defining the substance of the conference and it met on seven occasions over a 19-month period.

PIM XVIII was as much an 'event' as it was a conference. It included an Art Exhibition and a Trade Show, in which 37 enterprises and organizations involved in various aspects of port planning and development were represented, with a Trade Directory which has been distributed world-wide. Most notably, PIM XVIII was the occasion for the world's first performance of the 'Ocean Symphony' (Sinfonia n.8 'degli Oceani' op. 322), composed and conducted by Franco Mannini and dedicated to Elisabeth Mann Borgese, Chairperson of the IOI Planning Council and driving force behind *Pacem in Maribus*.

The Conference itself was large - larger than most previous PIMs. It was attended by more than 200 participants from 60 countries, including 80 participants from 46 developing countries.

PIM XVIII was made possible by financial support received from the Netherlands Ministry of Foreign Affairs, the Netherlands Ministry of Transport and Public Works and the City of Rotterdam and by the revenues received from exhibitors at the Trade Show. KLM and UNCTAD also provided supplementary financial support. PIM XVIII would have been impossible without the generous support of its main sponsors and their contribution is gratefully acknowledged.

## II. Report on the Conference

Discussions at PIM XVIII were structured around eight main themes, each of which was addressed during panel discussions. These themes and panels were:

- Changes in the world economy;
- Developments in technology;
- Ports and the environment;
- Ports as 'nodal points';
- The global transport system;
- Developing countries: cases of ports;
- Developing countries: role and needs; and
- The Port of Rotterdam.
