Portions of the "Power Processes" are excerpted from *Human Being: A Manual for Happiness, Health, Love, and Wealth* by David Ellis and Stan Lankowitz.

As part of Houghton Mifflin's ongoing commitment to the environment,
this text has been printed on recycled paper.

FOR THE MOST PART, STUDENTS HAVE CREATED THIS BOOK. The First Edition of *Becoming a Master Student* came from notes that I collected while teaching a course to students. They ended up teaching me more than I ever imagined there was to learn about student success while I was supposed to be teaching them. Since that edition, hundreds of thousands of students have used this book, and their continuing input has dramatically changed it. To all of those students of different ages and from a variety of cultures and ethnic groups, I send my heartfelt thanks.

In previous editions of this book, I have listed many of the educators who have contributed significantly to the strategies and insights offered to students. Unfortunately, this list has gotten so long that I cannot list, by name, the hundreds of significant contributors. Some educators have offered an idea or two as a part of an article. Others have provided the inspiration and much of the content for entire articles. Still others have offered suggestions that have totally rearranged the structure and outline of this text. Thank you all.

During the last 16 years, I have worked day to day with dozens of people who have contributed dramatically to the creation of this text. They have lent ideas, logistical support, project management, consultation, and design. To all of those people, I want you to know that I know that this book would never have been produced without you. There are a few people out of the dozens I have worked with who have made such a difference in this book that to leave them unnamed would border on unethical. In particular, I thank and acknowledge the work of Doug Toft, Jeff Swaim, Stan Lankowitz, Larry David, Bill Rentz, Adel Brown, Ellen Whalen, Mary Maisey-Ireland, Robbie Murchison, Bill Fleming, Bill Harlan, Judy Maisey, James Anderson, Wayne Zako, Karen Marie Erickson, and Shirley Wileman-Conrad.

For the photography and illustration in this book, I thank Mike Wolforth, Sid Spelts, Lee Christianson, John Backlund, Tim Blough, Mike Speiser, and Teresa Verburg. Thanks also for art direction, layout, and design, to the staff of Amherst & Reeves, particularly Doug Garcia, Susie Griggs, and Jenny Kendall.

For their contribution to my life and personal growth, I thank my wife, Trisha Waldron, and my friends Stan Lankowitz and Barb Churchill. I also treasure what I have learned from my children, Sara, Elizabeth, Snow, and Berry, and the constant encouragement of my parents, Maryellen and Ken.

I know that no book and no set of ideas comes from a single person, and my intention is to continue to share with others what all of the people I have mentioned here shared with me.

I want your feedback. When you see ways to improve this book, please write to me. More than ever, I recognize the value of your ideas. I want to know what works and what doesn't work for you.

Table of Contents

Introduction

This book is worthless	1
Get the most out of this book	4

Chapter 1 First Step

First Step: Truth is a key to mastery	7
If you skipped the Introduction	8
The Discovery and Intention Journal Entry System	10
Seven Discovery and Intention Statement guidelines	12
The value of higher education	18
Education's worth it . . . and you can pay for it	20
Ways to change a habit	22
Power Process #1: Ideas are tools	24
Learning styles—Discovering how you learn	26
Resources on learning styles	29
The master student	30
Maslow's qualities of a self-actualizing person	32
Master Student: Benjamin Franklin	34
Quiz	35
Learning Styles Application	37
Bibliography	37

Chapter 2 Time

You've got the time	39
Twenty-five ways to get the most out of now	46
Keep going?	50
Extracurricular activities— Reap the benefits	51
Time management for right-brained people	54
Planning sets you free	56
Strategies for scheduling	58
Strategies for long-term planning	60
Gearing up: Using a long-term planner	62
The seven-day antiprocrationation plan	65
Motivation or "I'm just not in the mood"	66

Save time with your computer	68
Studying with children underfoot	70
The ABC daily to-do's (or working your A's off)	72
Power Process #2: Be here now	74
Time is money . . . and money is time	76
Master Student: Malcolm X	78
Quiz	79
Learning Styles Application	81
Bibliography	81

Chapter 3 Memory

You never forget	83
The memory jungle	84
Twenty memory techniques	86
Give your "secret brain" a chance	91
Notable failures	91
Set a trap for your memory	92
Remembering names	93
Mnemonic devices	94
Power Process #3: Love your problems	96
Master Student: Helen Keller	98
Quiz	99
Learning Styles Application	101
Bibliography	101

Chapter 4 Reading

Muscle Reading	103
How Muscle Reading works	104
The Universal Law of Reading	106
Reading fast	111
When reading is tough	112
Read with a dictionary in your lap	113
English as a second language	114
We live like royalty	115
Power Process #4: Notice your pictures and let them go	116
Master Student: Barbara Jordan	118
Quiz	119
Learning Styles Application	121
Bibliography	121

Chapter 5 Notes

The note-taking process flows	123
Observe	124
Record	127
Review	132
Improving your handwriting	135
Power Process #5: I create it all	136
When instructors talk fast	139
Taking notes on reading	140
Get to the bones of your book with concept maps	141
Master Student: Rudolfo Anaya	142
Quiz	143
Learning Styles Application	145
Bibliography	145

Chapter 6 Tests

Disarm tests	147
What to do before the test	148
What to do during the test	151
F is for feedback, not failure	152
Words to watch for in essay questions	153
Have some fun!	153
Ways to predict test questions	154
Notable Failures: Part Two	157
Let go of test anxiety	158
Overcoming math and science anxiety	162
Special techniques for math and science tests	166
How to cram (even though you shouldn't)	167
Eight reasons to celebrate mistakes	168
Power Process #6: Detach	170
Cooperative learning— Study with people	172
Master Student: Fred Smith	174
Quiz	175
Learning Styles Application	177
Bibliography	177

Chapter 7 Diversity

Diversity is a fact—and a value	179
Diversity is a reality	180
Communicating across cultures	182
Adapting to the culture of higher education	186
Learn the language of higher education	187
The art of reentry—Going back to school as an older student	188
Stay tuned to these networks	190
Dealing with sexism and sexual harassment	192
Students with disabilities—Ask for what you want	194
Power Process #7: Choose your conversations and your community	196
Master Student: Charlayne Hunter-Gault	198
Quiz	199
Learning Styles Application	201
Bibliography	201

Chapter 8 Thinking

Critical thinking: A survival skill	203
Finding “Aha!” —	
Creativity fuels critical thinking	205
Tangram	205
Techniques for creative thinking	206
Qualities of a critical thinker	210
Core skills for critical thinkers	211
Becoming a critical thinker	212
Create on your feet	215
Uncovering assumptions	216
Computer software that can help you think	218
Ways to fool yourself—	
Six common mistakes in logic	219
Gaining skill at decision making	220
Warning: Advertising can be dangerous to your health	221
Power Process #8: Find a bigger problem...or a smaller one	222
Solving problems—	
Try the four P’s	224
Solving math and science problems	226
Master Student: Margaret Mead	228
Quiz	229
Learning Styles Application	231
Bibliography	231

Chapter 9 Writing

Writing well pays	233
Phase 1: Creating something from nothing—Getting ready to write	234
Phase 2: Getting down to it—Writing the first draft	237
Phase 3: Polishing your creation—Revising your draft	239
Misplaced modifier poses threat of suffocation	240
Seven steps to nonsexist writing	242
Giving credit where credit is due—Avoiding the high cost of plagiarism	243
Supercharge your computer with the Internet	244
Library: The buried treasure	246
Writing and delivering speeches	249
Power Process #9: Be a fool	252
Master Student: William Nolen	254
Quiz	255
Learning Styles Application	257

Chapter 12 What Next?

Now that you’re done—Begin	313
Use the following suggestions to continue	314
Attitudes, affirmations and visualizations	316
Attitude replacements	317
Some places your computer can visit	319
Taking notes on your journey—The art of journal writing	320
“But I don’t know what I want to do”—Choosing a major	322
Majors for the taking	323
Changing schools	324
Contributing: The art of selfishness	326
Career planning—Begin now	331
Learning the language of computers	336
Power Process #12: Be it	338
Master Student: Raul Julia	340
Quiz	341
Learning Styles Application	343
Bibliography	343
Index	344

THE FIRST EDITION OF THIS BOOK began with the sentence: *This book is worthless.*

Many students thought this was a trick to get their attention. It wasn't. Others thought it was reverse psychology. It wasn't that, either. Still others thought it meant that the book was worthless if they didn't read it. It's more than that.

The book is worthless even if you read it, if

reading is all you do.

What was true of that first edition is true of this one.

This book is worthless

Until you take action and use the ideas in it, *Becoming a Master Student* really is worthless.

You probably won't take action and use the ideas until you are convinced that you have something to gain. The main purpose of this introduction is to sell you on the value of committing yourself to spend the energy to use this book actively. Before you stiffen up and resist, the purpose of this sales pitch is not to separate you from your money. You already bought the book. Now you can get something for your money by committing yourself to take action—in other words, commit yourself to become a master student. Here's what's in it for you.

“ ” 抵消, 对抗 counteract
反对 oppose
Change and growth 经受住 withstand
take place when a person
has risked himself and 忍受 endure
dares to become
involved with 排斥 repel
experimenting with
his own life. 排斥 repel
—HERBERT OTTO

“ ”
The human ability to
learn and remember is
virtually limitless.
—SHEILA OSTRANDER
& LYNN SCHROEDER

Pitch #1: You can save money now and make more later.

Start with money. Your college education is one of the most expensive things you will ever buy. Typically, it costs students \$30 to \$70 an hour to sit in class. (See Exercise #6 on page 21.) Unfortunately, many students think their classes aren't even worth 50 cents an hour.

As a master student, you control the value you get out of your education, and that value can be considerable. The joy of learning aside, college graduates make about \$1 million more during their lifetimes than their nondegreed peers. It pays to be a master student.

Pitch #2: You can rediscover the natural learner in you.

Joy is important too. As you become a master student, you will learn how to learn in the most effective way possible by discovering the joyful, natural learner within you. *enjoyable*

Children are great natural students. They quickly learn complex skills, such as language, and they have fun doing it. For them, learning is a high-energy process involving experimentation, discovery, and sometimes, broken dishes. Then comes school. For some students, drill and drudgery replace discovery and dish breaking. Learning can become a drag. You can use this book to reverse that process and rediscover what you knew as a child—that laughter and learning are not mutually exclusive. *life period*

Sometimes learning does take effort, especially in college. As you become a master student, you will learn how to get the most out of that effort. *indusive*

Pitch #3: You can choose from hundreds of techniques.

Becoming a Master Student is packed with hundreds of practical, nuts-and-bolts techniques. And you can begin using them immediately. For example, during your textbook reconnaissance on page vi you practiced three powerful learning techniques in one 15-minute exercise. (If you didn't do the textbook reconnaissance, it's not too late to get your money's worth. Do it now.) If you doze in lectures, drift during tests, or dawdle on term papers, you can use the ideas in this book to become a more effective student. *打盹*

Not all these ideas will work for you. That's why there are so many of them in *Becoming a Master Student*. You can experiment with the techniques. As you discover what works, you will develop a unique style of learning that you can use for the rest of your life.

Pitch #4: You get the best suggestions from thousands of students.

The concepts and techniques in this book are not here because learning theorists, educators, and psychologists say they work. They are here because tens of thousands of students from all kinds of backgrounds tried them and say they work. These are people who dreaded giving speeches, couldn't read their own notes, and couldn't remember where the ileocaecal valve was. Then they figured out how to solve these problems, which was the hard part. Now you can use their ideas. *ileocaecal valve*

Pitch #5: You can learn about you.

The process of self-discovery is an important theme in *Becoming a Master Student*. Throughout the book you can use Discovery Statements and Intention Statements for everything from organizing your desk to choosing long-term goals. Studying for an organic chemistry quiz is a lot easier with a clean desk and a clear idea of the course's importance to you. *organizing*

Pitch #6: You can use a proven product.

The first seven editions of this book were successful for tens of thousands of students. In schools where it was widely used, the dropout rate decreased as much as 25 percent and in some cases, 50 percent. Student feedback has been positive. In particular, students with successful histories have praised the techniques in this book.

Pitch #7: You can learn the secret of student success.

If this sales pitch still hasn't persuaded you to actively use this book, maybe it's time to reveal the secret of student success. (Provide your own drum roll here.) The secret is, there are no secrets. Perhaps the ultimate formula is to give up formulas and keep inventing. *鼓乐*

The strategies and tactics that successful students use are well known. You have hundreds of them at your fingertips right now, in this book. Use them. Modify them. Invent new ones. You're the authority on what works for you. *tactics*

However, what makes any technique work is commitment—and action. Without them, the pages of *Becoming a Master Student* are just 2.1 pounds of expensive mulch. Add your participation to the mulch, and these pages are priceless. *mulch*

JOURNAL ENTRY #1 DISCOVERY STATEMENT

Success is a choice. Your choice. To get to what you want, it helps to know what you want. That is the purpose of this Journal Entry.

Select a time and place when you know you will not be disturbed for at least 20 minutes. (The library is a good place to do this.) Relax for two or three minutes, clearing your mind. Then complete the following sentences and keep writing. Write down everything you want to get out of school. Write down everything you want your education to enable you to do after you finish school.

When you run out of things to write, stick with it just a bit longer. Be willing to experience a little discomfort. Keep writing. What you discover might be well worth the extra effort. You can begin choosing success right now by choosing a date, time, and place to complete this Journal Entry. Write your choice here and block out the time on your calendar.

Date: _____

Time: _____

Place: _____

What I want from my education is . . .

When I complete my education, I want to be able to . . .

I also want . . .

JOURNAL ENTRY #2 DISCOVERY STATEMENT

On a separate piece of paper, write a description of a time in your life when you learned or did something well. This situation need not be related to school. Describe the details of the situation, including the place, time, and people involved. Describe how you felt about it, how it looked to you, how it sounded. Describe the physical feelings you associate with the event. Do the same for emotions.

Get the most out of this book

1. Rip 'em out. The pages of *Becoming a Master Student* are perforated because some of the information here is too important to leave in the book and some of it your instructor may want to see. For example, Journal Entry #1 asks you to write some important things you want to get out of your education. To keep yourself focused, you could rip that page out and post it on your bathroom mirror or some place where you'll see it several times a day.

You can reinsert the page by just sticking it into the spine of the book; it will hold. A piece of tape will fix it in place.

2. Skip around. You can use this book in several different ways. Read it straight through, or pick it up, turn to any page, and find an idea you can use. Look for ideas you can use right now. For example, if you're having trouble listening to boring lectures, skip directly to Chapter Five: Notes.

As you skip around, keep in mind that *Becoming a Master Student* is organized into two major sections. The first six chapters are about core study skills such as reading and taking notes; the last six focus on skills that apply in many areas of life.

3. If it works, use it. If it doesn't, lose it. If there are sections of the book that don't apply to you at all, skip them—unless, of course, they are assigned. Then, see if you can gain value from these sections anyway. When you are committed to getting value from this book, even an idea that seems irrelevant or ineffective at first can turn out to be a powerful tool. Topics that aren't relevant now may be just what you want in the next year or three years from now.

4. Rewrite this book. Here's an alternative strategy to the one above. If an idea doesn't work for you, rewrite it. Change the exercises to fit your needs. Create a new technique by combining several others. Create a technique out of thin air!

5. Put yourself into the book. As you read about techniques in this book, invent your own examples, starring yourself in the title role. For example, as you were reading the explanation of Exercise #1, you might have pictured yourself using this technique on your world history textbook. Sometimes it pays to let your mind wander.

6. Work with others. Talk with your classmates about what works and what doesn't. Peer pressure is often characterized as negative. You can turn that idea around. Form a group of students who support each other in mastering the art of learning.

7. Yuk it up. Going to school is a big investment. The stakes are high. It's OK to be serious about that, but you don't have to go to school on the deferred-fun program. A master student celebrates learning, and one of the best ways to do that is to have a laugh now and then.

8. Own this book. Write your name and address on the first page of this book now, and don't stop there. As you complete Journal Entries and exercises, you create a record of what you want to get out of school and how you intend to get it. Every time your pen touches a page, you move closer to mastery of learning.

Another way to own this book is to write summaries of each chapter. Experiment with several different techniques, including outlines, mind maps, and concept maps. For details, see Chapter Five.

9. Do the exercises. Action makes this book work. To get the most out of an exercise, read the instructions carefully before you begin. To get the most out of this book, do most of the exercises. More important, avoid feeling guilty if you skip some. And by the way, it's never too late to go back and do those.

These exercises invite you to write, touch, feel, move, see, search, ponder, speak, listen, recall, choose, commit, and create. You might even sing and dance. Learning works best when it involves action.

True education is not about cramming material into your brain. Education is the process of expanding your capabilities, of bringing yourself out into the world. Doing the exercises brings you into the heart of that process.

10. Get used to a new look and tone. This book looks different from traditional textbooks. *Becoming a Master Student* presents major ideas in magazine-style articles. You will discover lots of lists, blurbs, one-liners, pictures, charts, graphs, cartoons, and even a joke or two. The book is colorful throughout not only to provide visual interest but also to underscore in a graphic way the importance of racial diversity—one of the subjects of Chapter Seven.

The icons and key visuals in this book carry special meanings. Journal Entries are introduced by a drawing of a twisted pencil. This is a sign of infinity, symbolizing the idea that journaling is a process that never ends. The picture of the running shoe that accompanies the exercises throughout this book indicates the action that makes for effective learning.

One more note: As a strategy for avoiding sexist language, this book alternates the use of feminine and masculine pronouns.

11. Practice critical thinking. Throughout this book are activities labeled “Practicing Critical Thinking.” Look for them next to the icon of the “thinker” inside a light bulb, who’s there to encourage contemplation and constant problem solving. Also note that other elements of this text promote critical thinking, including exercises and Journal Entries.

12. Learn about learning styles. Check out the Learning Style Applications at the end of each chapter. These are included to increase your awareness of your preferred learning styles and to help you explore new styles. Each exercise will guide you through experiencing four specific learning styles as applied to the content of the chapter. The four-color icon for these applications represents those styles. For a detailed explanation of these styles, see “Learning styles—Discovering how you learn” in Chapter One.

EXERCISE #2 COMMITMENT

This book is worthless without your action. One powerful way to begin taking action is to make a commitment. Conversely, without commitment, sustained action is unlikely. The result is a worthless book. Therefore, in the interest of saving your valuable time and energy, this exercise gives you a chance to declare your level of involvement up front. From the choices below, choose the sentence that best reflects your commitment to using this book. Write the number in the space provided at the end of the list.

1. “Well, I’m reading this book right now, aren’t I?”
2. “I will skim the book and read the interesting parts.”
3. “I will read the book and think about how some of the techniques might apply to me.”
4. “I will read the book, think about it, and do the exercises that look interesting.”
5. “I will read the book, do exercises, and complete some of the Journal Entries.”
6. “I will read the book, do exercises and Journal Entries, and use some of the techniques.”
7. “I will read the book, do most of the exercises and Journal Entries, and use some of the techniques.”
8. “I will study this book, do most of the exercises and Journal Entries, and use some of the techniques.”
9. “I will study this book, do most of the exercises and Journal Entries, and experiment vigorously with most of the suggestions in order to discover what works best for me.”
10. “I promise to get value from this book, beginning with Exercise #1: ‘Textbook Reconnaissance,’ even if I have to rewrite the sections I don’t like and even if I have to invent new techniques of my own.”

Enter your commitment level and today’s date here:

Commitment level 10 Date 10.9.2003

If you selected commitment level 1 or 2, you might consider passing this book on to a friend. If your commitment level is a 9 or 10, you are on your way to terrific success in school. If you are somewhere in between, experiment with the techniques; and if you find they work, consider returning to this exercise and raising your level of commitment.

first step

In this
chapter...

■ take a First Step to personal change:
tell the truth about your current
abilities. Doing so allows you to
change habits and to set goals that
you can reach. In the process, keep
yourself on track with the Discovery
and Intention Journal Entry System.
Also discover and expand your
learning styles, reflect on the value of
higher education, and find ways to
pay for school.

JOURNAL ENTRY #3 DISCOVERY STATEMENT

Perhaps you know people who've tried to repair their cars without knowing what parts they needed. Or maybe you've tried to buy clothes for someone without knowing that person's size and preferred styles. In such cases we can be more effective when we know what the specific problem is or what the people involved truly want.

On a separate sheet of paper, describe a time when you wanted to solve a problem but lacked specific information about the nature of that problem. This could also be a time when you had no clear idea of the outcome you desired.

Now describe a time when, based on your diagnosis and desired results, you were able to accurately diagnose a problem and efficiently solve it.

Succeeding in this course—and in school—uses the same process. It begins with identifying the skills you already have, along with the new skills you want to acquire. It also involves telling the truth about any problem you face right now and creating a plan to solve it.

Take time now to preview the Discovery Wheel exercise on page 14. Then list several specific benefits you can gain by reading and applying this chapter.

I discovered that I . . .

THE FIRST STEP TECHNIQUE IS SIMPLE: Tell the truth about who you are and what you want. End of discussion. Now proceed to Chapter Two.

Well, it's not quite that simple.

The First Step is one of the most powerful tools in this book. It magnifies the power of all the other techniques. It is a key to becoming a master student.

First Step : Truth is a key to mastery

Unfortunately, a First Step is easier to explain than it is to use, and it's not that easy to explain. "Telling the truth" sounds like pie-in-the-sky moralizing, but there is nothing pie-in-the-sky about a First Step. It is a practical, down-to-earth way to change behavior. No technique in this book has been field-tested more often or more successfully—or under tougher circumstances. Just ask almost any recovering alcoholic.

A fundamental principle of Alcoholics Anonymous is that alcoholics must tell the truth about their drinking before they can begin to change. This is an essential ingredient in AA's "First Step" and in its entire Twelve Step program. Today people recovering from addictions to food, drugs, sex, work, and whatever else human beings can abuse, employ the same principle. They use First Steps to change their behavior for one reason: First Steps work.

Compared to conquering addictions, training to be a master student is a snap. But let's be truthful. It's not easy to tell the truth about ourselves. We might have to admit that we're afraid of algebra or that we never complete term papers on time. It's tough to admit weaknesses.

“ ”

No one can make you feel inferior without your consent.
—ELEANOR ROOSEVELT

“ ”

You either change things or you don't. Excuses rob you of power and induce apathy.

—AGNES WHISTLING ELK

“ ”

In oneself lies the whole world, and if you know how to look and learn, then the door is there and the key is in your hand. Nobody on earth can give you either that key or the door to open, except yourself.

—J. KRISHNAMURTI

For some people, it's even harder to admit strengths. Maybe they don't want to brag. Maybe they're attached to poor self-images. The reasons don't matter. The point is, using the First Step system in *Becoming a Master Student* means telling the truth about your good qualities too.

Making this technique work also means telling the truth about what you want.

Sounds easy, you say? Many people would rather eat nails. If you don't believe it, find three other students and ask them what they want to get out of their educations. Be prepared for hemming and hawing, vague generalities, and maybe even a helping of pie-in-the-sky à la mode.

On the other hand, if one of them tells you she wants a degree in journalism with double minors in earth sciences and Portuguese so she can work as a reporter covering the environment in Brazil, chances are, you've found a master student.

The details of her vision are a clue to her mastery. Goals are more powerful when they are specific. So are First Steps, whether they are verbal or written. For example, if you want to improve your note-taking skills, you might write, "I am an awful note taker." It would be more effective to write, "I can't read 80 percent of the notes I took in American Constitutional History last week and I have no idea what was important in that class."

Be just as specific about what you want. You might declare, "I want to take legible notes that help me predict what questions will be on the final exam."

In Exercise #5: "The Discovery Wheel" and Exercise #3 you can take a giant First Step. You can tell the truth about what kind of student you are and what kind of student you want to become. If that prospect puts a knot in your stomach, that's good. Notice that knot. It is your friend. It is reminding you that telling the truth about yourself takes courage, which is an important characteristic of a master student.

Your courage will be rewarded. The Discovery Wheel and the rest of the exercises in this book are your First Steps to tapping resources you never imagined you had. You can even take a First Step to mapping out the rest of your life with a detailed career plan.

They're all First Steps—no kidding. It's just that simple. The truth has power.

JOURNAL ENTRY #4 INTENTION STATEMENT

Review Exercise #1: "Textbook reconnaissance." Consider the articles in this book that you thought might be valuable. Choose the one from which you think you can get the most immediate, practical benefit and scan that article until you come to a specific technique you can use. Write an Intention Statement in this space concerning how you will use that technique within the next week. Include when you intend to use it.

For example, if you listed the article called "When reading is tough," you could use any of the techniques suggested for difficult reading assignments. If you have a tough computer science course, you might choose to form a support group to discuss reading assignments. In that case, you might write, "I intend to contact four other students after class tomorrow about forming a group to study computer science."

I intend to use the study technique . . .

I will use it at these times . . .

If you skipped the Introduction . . .

Some people think introductions are useless clutter. The Introduction is an important part of this book. It suggests ways to get your money's worth. Please read the Introduction. Here's what awaits you:

- *Exercise #1: "Textbook reconnaissance"*
- *This book is worthless*
- *Get the most out of this book*
- *Exercise #2: "Commitment"*

Please read it now.

EXERCISE #3 TAKING THE FIRST STEP

The purpose of this exercise is to give you a chance to discover the positive as well as the negative aspects of yourself. It is the most difficult exercise in this book. To make the exercise worthwhile, do it with courage.

Some people suggest that looking at negative aspects is counter to positive thinking. Well, perhaps. Positive thinking is a great technique. So is seeing the truth, especially when we see the whole picture—even though a realistic picture of ourselves may include some extremely negative points.

If you admit that you can't read, and that's the truth, then you have taken a strong positive First Step to becoming a successful reader. On the other hand, if you say that you are a terrible math student, and that's not the truth, then you are programming yourself to accept unnecessary failure. The point is, tell the truth.

This exercise is similar to each Journal Entry—Discovery Statement appearing throughout this text. The difference is that in this case, for reasons of confidentiality, you don't write your discoveries in the book.

Be brave. If you approach this exercise with courage, you are likely to write down some things you don't want others to read. You may even write down some truths about yourself that could get you into trouble. Do this exercise on separate pieces of paper; then hide or destroy them.

To make this exercise work, follow these three suggestions:

1. Be specific. It is not effective to write, "I could improve my communication skills." Of course you can. Instead, write down precisely what you can do to improve your communication skills. For example: "I can spend more time really listening while the other person is talking, instead of thinking about what I'm going to say next."

2. Look beyond the classroom. What goes on outside school often has the greatest impact on your ability to be an effective student.

3. Be courageous. This exercise is a waste of time if done halfheartedly. Be willing to risk. Sometimes you may open a door that reveals a part of yourself that you didn't want to admit was there. The power of this technique is that once you know what the "it" is, you can do something.

Part 1

Time yourself, and for 10 minutes, write as fast as you can and complete the following sentences with anything that comes to mind. Complete each sentence at least 10 times. If you get stuck, don't stop; just write something—even if it's crazy.

It is ineffective when I . . .
It doesn't work when I . . .
I could change . . .

Part 2

When you have completed the first part of the exercise, review what you have written and cross off things that don't make any sense. The sentences that remain represent possible goals for your experience as a master student.

Part 3

Here's the tough part. Time yourself, and for 10 minutes, write as fast as you can. Complete the following sentences with anything that comes to mind. As in Part 1, complete each sentence at least 10 times and just keep writing, even if it sounds silly.

I am very good at . . .
It is effective when I . . .
Something very positive about me is . . .

Part 4

Review your list and circle the things that really fit. This is a good list to keep for those times when you question your own value and worth.

1. Deep

The Discovery and Intention

One way to become a better student is to grit your teeth, grunt, and try harder. There is another way. You can use the Discovery and Intention Journal Entry System to increase your effectiveness with the least possible struggle. It's a way to focus your energy, and it's closely related to the idea of taking a First Step.

The Discovery and Intention Journal Entry System is a little like flying a plane. Airplanes are seldom exactly on course. Human and automatic pilots are always checking and correcting the heading. The resulting path looks like a zigzag. The plane is almost always flying in the wrong direction, but because of constant observation and course correction, it arrives at the right place.

The same system can be used by students. In fact, you have already used it if you completed Journal Entries on pages 3 and 8. (If you haven't, consider doing one right now.) Journal Entries throughout this book are labeled either "Discovery Statement" or "Intention Statement." Each Journal Entry will contain a short set of directions and space in which you can write.

Through Discovery Statements, you can learn "where you are." They are a record of what you learn about yourself as a student—both strengths and weaknesses.

Discovery Statements can also be declarations of what you want, descriptions of your attitudes, statements of your feelings, transcripts of your thoughts, and chronicles of your behavior.

Intention Statements can be used to alter your course. They are statements of your commitment to do a specific task, to take a certain action. An intention arises out of your choice to direct your energy toward a particular goal.

The purpose of this system is not to get you pumped up and excited to go out there and try harder. Discovery and Intention Statements keep you focused on what you want and how you intend to get it.

The Journal Entry process is a cycle. You can write Discovery Statements about where you are and where you want to go. Then you can write Intention Statements about the specific steps you will take to get there.

Journal Entry System

Then you can write Discovery Statements about whether you completed those steps and what you learned in the process, followed by more Intention Statements, and so on. Sometimes the statements will be long and detailed. Usually they will be short, maybe just a line or two. Practice it, and the cycle can become automatic.

Don't panic when you fail to complete an intended task. Straying off course is normal. Simply make the necessary corrections. Miraculous progress may not come immediately. Do not be concerned. Stay with the cycle. Use Discovery Statements to get clear about your world and what you want out of it. Then use Intention Statements to direct your actions. When you notice progress, record it.

The following statement might strike you as radical, but it is true: It often takes the same amount of energy to get what you want in school as it takes to get what you don't want. Sometimes getting what you don't want takes even more effort.

An airplane burns the same amount of fuel flying away from its destination as it does flying toward it, so it pays to stay on course.

You can use the Discovery and Intention Journal Entry System to stay on your own course and get what you want out of school. Consider the guidelines for Discovery Statements and Intention Statements on pages 12 and 13, then develop your own style. Once you get the hang of it, you might discover you can fly.

EXERCISE #4 DEFACE THIS BOOK

Some books should be preserved in pristine condition. This isn't one of them.

There are valid reasons for not writing in any book. For one thing, it decreases the resale value. However, the benefit of writing in your books outweighs that consideration.

Becoming a Master Student is about learning, and learning is an active pursuit, not a passive one. Something happens when you reach out and touch a book with your pen. When you make notes in the margin, you can hear yourself talking with the author. When you doodle and underline, you can see the author's ideas take shape. You can even argue with an author or create your own ideas.

*While you're at it, create symbols for reviewing the text later, such as Q for questions or an * for important points. You could also circle words to look up in a dictionary.*

To complete this exercise, find something you agree with or disagree with on this page and write a short note in the margin about it. Or draw a diagram. Better yet, do both. Let creativity be your guide. Have fun.

Begin defacing now.
