# PREFACE

**T**he tenth edition of *Crisis in American Institutions* is something of a landmark for us, and we accordingly used the occasion to reflect on the aims and direction of the book over the years. We think that process has produced a stronger book.

Though the basic plan of the book remains the same as in earlier editions, we have made a number of changes. We have dropped some good but aging articles, and we have added several fresh pieces on critical problems that have recently caught national attention—including, among others, corporate “downsizing,” immigration, the growing concentration of wealth, and racial disparities in the criminal justice system. And we have strengthened our commitment to publishing the best of what we feel is an increasingly rich crop of work by social scientists—including pieces by Herbert Gans on poverty, Elliot Liebow on the homeless, William Julius Wilson on ghetto joblessness, and Douglas Massey and Nancy Denton on racial segregation. All twelve parts of the book have been updated with at least one—and sometimes several—new articles.

Each edition has offered an opportunity to review the best contemporary writing on American social problems, and with each we have regretted dropping old favorites and omitting promising new work. We invariably find far more worthwhile writing than we are able to use. That isn’t surprising, since we survey a range of topics—from corporate power to racism, to the family and the environment—each of which could profitably occupy a lifetime of study and writing.

As always, many people helped us in many ways to make this edition of *Crisis* a reality. Alan McClare and Margaret Loftus at Longman provided much-appreciated skill and patience. The Center for the Study of Law and Society at the University of California, Berkeley, once again offered a supportive environment. Rod Watanabe as always created order whenever chaos threatened, and Jena Tarleton pitched in at a crucial point to help with the manuscript. We deeply appreciate their assistance and friendship. Finally, we are most grateful to the students and teachers who have continued to teach us about each edition’s strengths and weaknesses.

Preface xi

Introduction: Approaches to Social Problems 1

## SYSTEMIC PROBLEMS

### PART ONE

### CORPORATE POWER

#### PAGE 17

- 1 ***Getting Corporations Off the Public Dole*** Janice Shields 21  
*The poor aren't the only recipients of government largesse.*
- 2 ***Smoke Screen*** Philip Hiltz 29  
*How cigarette companies try to hook the young.*
- 3 ***The Grand Bazaar*** William Greider 39  
*How private power undermines the purposes of government.*
- 4 ***Missing from the News*** Ben H. Bagdikian 50  
*How the media business shapes the news.*

## PART TWO

## ECONOMIC CRISIS

PAGE 57

- 5 ***Losing Out to Mexico*** Donald L. Barlett and James B. Steele 61  
*Where American jobs are going—and why.*
- 6 ***When You Stop, You Die: The Human Toll of Unemployment***  
 Thomas J. Cottle 69  
*How jobless men feel about being made expendable.*
- 7 ***The Company as Family, No More*** N. R. Kleinfield 76  
*In the era of downsizing, the relationship between corporations and their workers isn't what it used to be.*
- 8 ***The License for Financial Devastation***  
 John Kenneth Galbraith 86  
*How entrenched beliefs justify economic disorder.*

## PART THREE

## INEQUALITY

PAGE 95

- 9 ***Top Heavy*** Edward N. Wolff 99  
*The concentration of wealth is at its highest levels since before World War II.*
- 10 ***Doing Poorly: The Real Income of American Children in Comparative Perspective*** Lee Rainwater and Timothy M. Smeeding 105  
*America's children are worse off than those of virtually every other industrial society.*
- 11 ***Day by Day: The Lives of Homeless Women***  
 Elliot Liebow 115  
*Being homeless is hard work.*
- 12 ***The Underclass Label*** Herbert J. Gans 125  
*How fashionable labels distort our understanding of poverty.*

## PART FOUR

## RACISM

PAGE 139

- 13 *American Apartheid*** Douglas S. Massey and  
Nancy A. Denton 143

*The persistence of segregation creates unique disadvantages for black Americans.*

- 14 *Measuring Employment Discrimination*** Marc Bendick, Jr.,  
Charles W. Jackson, and Victor A. Reinoso 150

*Some say job discrimination against minorities is a thing of the past. It isn't.*

- 15 *Immigration to the Burn Zone*** Roberto Suro 163

*New opportunities for Hispanic immigrants are matched by new perils.*

- 16 *Asian Americans: The Myth of the Model Minority***  
Ronald Takaki 174

*Lingering stereotypes hinder opportunity.*

## PART FIVE

## SEXISM

PAGE 181

- 17 *The Wages of the Backlash*** Susan Faludi 183

*How women really fare in today's economy.*

- 18 *Learning Silence*** Peggy Orenstein 189

*How a "hidden curriculum" stifles girls in America's schools.*

- 19 *"Fetal Rights": A New Assault on Feminism***  
Katha Pollitt 198

*How concern for the rights of the unborn may infringe on those of women.*

# INSTITUTIONS IN CRISIS

## PART SIX

### THE FAMILY

PAGE 17

- 20 *Families on the Fault Line* Lillian B. Rubin 213  
*Time, money, and child care are critical problems for working-class families.*
- 21 *Time for Parenting* Sheila B. Kamerman and Alfred J. Kahn 220  
*The United States is the only major industrial country that fails to provide paid leaves for parents.*
- 22 *'Til Death Do Us Part* Nancy Gibbs 229  
*Why abused women sometimes kill.*

## PART SEVEN

### THE ENVIRONMENT

PAGE 241

- 23 *Why We Have Failed* Barry Commoner 243  
*Trying to end pollution by cleaning up after the fact won't work. Only prevention will.*
- 24 *Environmental Racism* Robert D. Bullard 247  
*Minorities are the worst victims of environmental pollution.*
- 25 *The Heat Is On* Ross Gelbspan 256  
*Global warming sparks a "blaze of denial."*

## PART EIGHT

## THE WORKPLACE

PAGE 265

- 26 *How Labor Fares in Advanced Economies* Richard B. Freeman 267

*In many respects, American workers have it harder than their counterparts in Europe.*

- 27 *The Forgotten Americans* John E. Schwarz and Thomas J. Volgy 275

*The American ethos says that hard work will lead to a good life. For too many Americans, it isn't true.*

- 28 *The Political Economy and Urban Racial Tensions* William Julius Wilson 283

*How massive unemployment destroys ghetto communities.*

## PART NINE

## HEALTH AND WELFARE

PAGE 301

- 29 *Excess Mortality in Harlem* Colin McCord, M.D., and Harold P. Freeman, M.D. 305

*Life expectancy is lower for men in Harlem, USA, than in Bangladesh.*

- 30 *The Medically Uninsured: Will They Always Be with Us?* Steven A. Schroeder 312

*Our national willingness to let millions go without health insurance distinguishes the United States from other developed countries.*

- 31 *Health Care in Crisis: Does Canada Have the Answer?* Consumer Reports 320

*Contrary to myths, Canadians have a health care system that works better than ours—and costs less.*

- 32 *So How Did I Get Here? Growing Up on Welfare* Rosemary L. Bray 331

*A former recipient shatters myths about welfare.*

## PART TEN

## THE SCHOOLS

PAGE 339

- 33 *Life on the Mississippi: East St. Louis, Missouri* Jonathan Kozol 341

*The collapse of public education in the inner city.*

- 34 *The Myth of Public School Costs* David C. Berliner and Bruce J. Biddle 349

*Spending for schooling is much less generous than many believe.*

- 35 *The Great School Sell-Off* Peter Schrag 356

*The limits of school "choice."*

## PART ELEVEN

## CRIME AND JUSTICE

PAGE 365

- 36 *Crime and Work* Elliott Currie 367

*Does unemployment cause crime? Yes.*

- 37 *"Three Strikes and You're Out": A Debate* Jerome H. Skolnick and John J. DiIulio, Jr. 377

*Arguments, pro and con, on the usefulness of life sentences for repeat offenders.*

- 38 *Young Black Americans and the Criminal Justice System* Marc Mauer and Tracy Huling 396

*One in three is under the "supervision" of the criminal justice system.*

- 39 *Workaday World, Crack Economy* Philippe Bourgois 405

*Drug dealing as an equal opportunity employer for inner-city youth.*

## PART TWELVE

## EPILOGUE

## PAGE 413

- 40 *Jobs for All*** Sheila D. Collins, Helen Lachs Ginsburg, and  
Gertrude Schaffner Goldberg 417

*A plan to put America to work.*

- 41 *Planning for Economic Conversion*** Seymour Melman and  
Lloyd J. Dumas 427

*How to shift the post-Cold War economy to civilian needs.*

- 42 *Seize the Day*** Robert Heilbroner 436

*The urgency of rebuilding the nation's infrastructure.*

- 43 *A Global New Deal*** Richard J. Barnet and John Cavanagh 441

*Tackling the crises in American society will require changes in the international economy.*

# INTRODUCTION: APPROACHES TO SOCIAL PROBLEMS

When we first put this book together in the late 1960s, the American mood was very different than it is today. The United States in those days was the undisputed political and economic leader among the world's countries. American living standards had been steadily rising. Each year brought new technological wonders that seemed to promise still more abundance to come. Small wonder that many social scientists accepted the widely prevailing view that most fundamental economic and political problems had been solved in the United States—or, at least, were well on their way to a solution.

Today all of that seems like ancient history. Indeed, by the time *Crisis in American Institutions* first appeared, the superficial tranquility of postwar American society had already begun to unravel—hence our choice of title. But by now, Americans are confronted with a range of social problems whose magnitude and visibility would have seemed almost incomprehensible when we first wrote our book.

These changes have profoundly affected the way social scientists (and other observers of American society) have thought about social problems. After all, the study of social problems—like any other aspect of social science—does not take place in the antiseptic confines of a scientific laboratory. Social theorists, like everyone else, are deeply influenced by broader trends in the society, in the economy, and the cultural and technological setting of social life. As a way of introducing the articles that follow, of placing the debates of the 1980s and 1990s in some historical and intellectual context, we want to spend a few pages

outlining the way in which the study of social problems has developed over time and how those larger social changes have shaped its basic assumptions and guiding themes.

## DEFECTIVES AND DELINQUENTS

The earliest writers on social problems in this country were straightforward moralists, staunch supporters of the virtues of thrift, hard work, sexual purity, and personal discipline. Writing at the end of the nineteenth century, they sought ways of maintaining the values of an earlier, whiter, more Protestant, and more stable America in the face of the new challenges of industrialization, urbanization, and immigration.<sup>1</sup>

This early social science usually concentrated on the problems of what one nineteenth-century textbook described as the “defective, dependent, and delinquent classes.”<sup>2</sup> The causes of social problems were located in the physical constitution or moral “character” of the poor, the criminal, the insane, and other “unfortunates.” For these theorists, the solution to nineteenth-century social problems lay in developing means of transforming the character of these “defective” classes, in the hope of equipping them better to succeed within a competitive, hierarchical society whose basic assumptions were never questioned. Social reformers working from these theories created, in the last part of the nineteenth and the first part of the twentieth centuries, much of the modern apparatus of “social control” in the United States: reformatories, modern prisons, institutions for the mentally ill, and the beginnings of the modern welfare system.

## THE RISE OF “VALUE-FREE” SOCIAL PROBLEMS

During the first decades of this century, this straightforward moralism was increasingly discarded in favor of a more subtle, ostensibly “neutral” approach to writing about social problems. By the 1930s, the idea that the social sciences were—or could be—purely “objective” or “value-free” had come to be widely accepted. From that point until the present, social problems theory has been characterized by a tortuous attempt to prove that theories and policies serving to support the status quo are actually scientific judgments arrived at objectively. In this view, social scientists do not try to impose their own values in deciding what kinds of things will be defined and dealt with as social problems. Instead, the “scientific” student of social problems simply accepts “society’s” definition of what is a problem and what is not. This approach is apparent in these statements, taken from major textbooks, on what constitutes a social problem:

Any difficulty or misbehavior of a fairly large number of persons which we wish to remove or correct.<sup>3</sup>

What people think they are.<sup>4</sup>

Whenever people begin to say, isn't it awful! Why don't they do something about it?<sup>5</sup>

Conditions which affect sizable proportions of the population, which are out of harmony with the values of a significant segment of the population, and which people feel can be improved or eliminated.<sup>6</sup>

Any substantial discrepancy between socially shared standards and actual conditions of social life.<sup>7</sup>

These definitions share the common idea that social problems are popularly defined. No condition is a problem unless a certain number of people in a society say it is. Since we are merely taking, as our starting point, the definitions of the problem that "other people," "society," or "significant segments of the population" provide, we are no longer in the position of moralizing about objective conditions.

The basic flaw in this happy scheme is that it does not make clear *which* segments of the population to consult when defining problems or how to decide between conflicting ideas about what is problematic and what is not. In the real world, societies are divided along class, racial, sexual, and other lines, and the sociologist who proposes to follow "people's" definitions of social problems in fact generally adopts one of several competing ideologies of social problems based on those divisions. In practice, the ideology adopted has usually been not too different from that of the "unscientific" social problems writers of the nineteenth century.

These points are not new; they were raised as early as 1936 in an unusually perceptive paper called "Social Problems and the Mores," by the sociologist Willard Waller. Waller noted, for example, that discussions of poverty in the social problems literature of the 1930s were shaped by the unquestioning acceptance of the ideology of competitive capitalism:

A simpleton would suggest that the remedy for poverty in the midst of plenty is to redistribute income. We reject this solution at once because it would interfere with the institution of private property, would destroy the incentive for thrift and hard work and disjoint the entire economic system.<sup>8</sup>

Waller's question is fundamental: What has been left out in a writer's choice of what are to be considered problems? What features of society are going to be taken for granted as the framework *within* which problems will be defined and resolved? In this case, the taken-for-granted framework is the principle of private property and individual competition. In general, Waller argued, "social problems are not solved because people do not want to solve them";<sup>9</sup> they *are* problems mainly because of people's unwillingness to alter the basic conditions from which they arise. Thus:

Venereal disease becomes a social problem in that it arises from our family institutions and also in that the medical means which could be used to prevent it, which would unquestionably be fairly effective, cannot be employed for fear of altering the mores of chastity.<sup>10</sup>

For Waller, the definition of social problems was, in the broadest sense, a political issue involving the opposed ideologies of conflicting groups.

Waller's points still ring true. Most social problems writers in the United States still tacitly accept the basic structure of American society and restrict their treatment of social problems to maladjustments *within* that structure.

## SOCIAL PROBLEMS IN THE 1950s: GRADUALISM AND ANTICOMMUNISM

This is not to say that the literature on social problems since the 1930s has all been the same. Books on social problems, not surprisingly, tend to reflect the preoccupations of the time when they were written. Those conceived in the 1950s, for example, reflect social and political concerns that now seem bizarre. The shadow of McCarthyism and the general national hysteria over the "Communist menace" pervaded this literature. Consider the discussion of "civil liberties and subversion" in Paul B. Horton and Gerald R. Leslie's textbook *The Sociology of Social Problems*.<sup>11</sup> Horton and Leslie saw the "American heritage of liberty" being attacked from both Left and Right, from both "monolithic communism" and overzealous attempts to defend "our" way of life from it. Their position was resolutely "moderate." They claimed a scientific objectivity; yet, they were quite capable of moral condemnation of people whose politics were "extreme," whether Right or Left:

Most extremists are deviants. Most extremists show a fanatical preoccupation with their cause, a suspicious distrust of other people in general, a disinterest in normal pursuits, recreations, and small talk, and a strong tendency to divide other people into enemies and allies.<sup>12</sup>

The preference for "normal pursuits," even "small talk," over social criticism and action was common in an age noted for its "silent generation," but it was hardly "scientific." Among the other presumably objective features of the book were the authors' "rational proposals for preserving liberty and security," including these:

*An adequate national defense* is, needless to say, necessary in a world where an international revolutionary movement is joined to an aggressive major power. This is a military problem, not a sociological problem, and is not discussed here.

*Counterespionage is essential.* Highly trained professional agencies such as the FBI and the Central Intelligence Agency can do this efficiently and without endangering personal liberties of citizens. If headline-hunting congressmen, Legion officials, or other amateurs turn G-men, they merely scare off any real spies and destroy the counterespionage effort of the professionals.<sup>13</sup>

The military and intelligence services themselves were not considered to be problems relevant for social science. Questions about the operation of these agencies were viewed as internal and technical, military rather than sociological, issues.

In a section on “Questions and Projects,” the authors asked, “How have conservatives or reactionaries sometimes given unintentional assistance to the Communists? How have liberals sometimes given unintentional assistance to the Communists?”<sup>14</sup>

In the introduction to their book, Horton and Leslie considered the possibilities of social change and the proper role of social scientists in promoting it. They carefully adopted a middle ground between conservatives, to whom social problems were primarily problems of individual character, and “extremists” hoping for sudden or radical changes in social structure. They argued that the resolution of social problems “nearly always involves sweeping institutional changes” but also that such changes are “costly” and “difficult,” and that therefore

it is unrealistic to expect that these problems will be solved easily or quickly. . . . Basic solutions of social problems will come slowly, if at all. Meanwhile, however, considerable amelioration or “improvement” may be possible.<sup>15</sup>

Social change, according to these authors, must be gradual and realistic; it must also be guided by experts. The authors insisted that their own role, and that of social experts in general, was merely to show the public how to get what they already valued. But in this role it was folly for the “layman” to question the expert. Horton and Leslie wrote that “when experts are *agreed* upon the futility of one policy or the soundness of another, it is sheer stupidity for the layman to disagree.”<sup>16</sup>

An elitist, Cold War liberalism and gradualism, a fear of extremism and of an international Communist conspiracy—all these were presented not as moral and political positions but as fundamental social scientific truths. The sturdy entrepreneurial and Protestant values described in Waller’s paper of the 1930s gave way, in Horton and Leslie’s book of the 1950s, to a general preference for moderation, anticommunism, and “normal pursuits.”

## THE 1960s: AFFLUENCE AND OPTIMISM

A different imagery dominated the social problems literature of the next decade. Robert K. Merton and Robert M. Nisbet’s *Contemporary Social Problems*<sup>17</sup> was a product of the beginning of the 1960s, the period of the “New Frontier,” which saw a significant shift, at least on the surface, in the focus of social concern. Americans were becoming aware of an “underdeveloped” world abroad and a “disadvantaged” world at home, both unhappily excluded from the benefits of an age of general “affluence” and well-being. New agencies of social improvement were created at home and abroad. A critique of old-style welfare efforts began to develop, along with the notion of “helping people help themselves,” whether in Latin America, Harlem, or Appalachia. The idea of inclusion, of participation, in the American way of life became a political metaphor for the age. From a slightly different vantage, the idea emerged as “development” or “modernization.” The social problems of the 1960s would be solved by extending the technological and intellectual resources of established American institutions into

excluded, deprived, or underdeveloped places and groups. An intervention-minded government combined with an energetic social science on a scale unprecedented in this country.

In this period—very brief, as it turned out—social problems were often seen as problems of being *left out* of the American mainstream: “left behind,” as the people of Appalachia were described; “traditional,” like the Mexican Americans; or “underdeveloped,” like most Africans, Asians, and Latin Americans. In social problems theory, these ideas were manifested in a conservative ideology that celebrated American society as a whole, coupled with a liberal critique of the conditions hindering the extension of the American way to all.

One variant of this view was given in Nisbet’s introduction to *Contemporary Social Problems*. For Nisbet, social facts become problematic when they “represent interruptions in the expected or desired scheme of things; violations of the right or the proper, as a society defines these qualities; dislocations in the social patterns and relationships that a society cherishes.”<sup>18</sup>

Nisbet’s assessment of the American situation was in keeping with the exaggerated optimism of the early 1960s:

In America today we live in what is often called an affluent society. It is a society characterized by imposing command of physical resources, high standards of private consumption, effective maintenance of public order and security, freedom from most of the uncertainties of life that plagued our ancestors, and relatively high levels of humanitarianism. There are also, of course, squalid slums, both urban and rural; occasional epidemics of disease; sudden eruptions of violence or bigotry, even in the most civilized of communities; people for whom the struggle for food and shelter yet remains obsessing and precarious. Thus, we are not free of social problems, and some of them seem to grow almost in direct proportion to our affluence.<sup>19</sup>

Nisbet was aware that America had not yet solved all its problems; indeed, that some seem to come with the generally glittering package that is America in the twentieth century. Yet the problems were viewed as peripheral, as occasional eruptions in the backwaters of society where modern institutions had not fully penetrated.

Like earlier theorists, Nisbet sharply separated the role of the scientific student of social problems from that of other concerned people. The social scientist, as a scientist, should not engage in moral exhortation or political action but instead concentrate on understanding. At the same time, the scientist is

as interested as the next citizen in making the protection of society his first responsibility, in seeing society reach higher levels of moral decency, and when necessary, in promoting such legal actions as are necessary in the short run for protection or decency.<sup>20</sup>

Here the scientific stance masked a preference for vaguely defined values—“societal protection” and “moral decency”—that, in turn, determine what will be selected as social problems. In this instance, problems were selected according to whether they offended the values of social stability, that is, values associated with the conservative tradition in social thought.
