Welcome to IJCNN '01

On behalf of the members of the Organizing Committees, we would like to welcome everyone to the first International Joint Conference on Neural Networks of the new Millennium. The conference this year is sponsored by the International Neural Network Society, in conjunction with the IEEE, and returns to the site of the IJCNN two years ago. Our venue, Washington, D.C., offers an abundance of interesting sites and activities for our attendees and their accompanying friends and family, although without the spectacular mountain scenery provided for us in Como, Italy last year. In addition, we have reworked the format of the conference to reduce the number of parallel sessions in an effort to allow attendees to investigate presentations and discussions outside of their normal disciplines. In order to provide this new format, we have featured the Poster Sessions in a stand-alone presentation schedule, combined with the refreshments, and with no competing oral presentations. We hope that this structure will serve to encourage broader and inter-disciplinary discussions at those sessions.

Our featured speakers this year include Prof. Teuvo Kohonen and Prof. Bernard Widrow, along with Dr. Paul Stewart. A major announcement concerning new NSF funding initiatives will be made in one of the special presentations. In addition, we have introduced two new topics into special sessions at this conference. One on Quantum Computing will explore that topic and applications to quantum neural computing, the other will be a competition based upon analysis, estimation and prediction of time series for challenging problems.

At this time, we would like to take the opportunity to acknowledge the dedicated efforts of a small team of people who have worked to organize and schedule the 2001 conference. When we undertook the task of serving as General Chairs, we recognized that the work could not be accomplished without key support from INNS members and the entire Program Committee including teams from Talley, Community of Science and Omnipress. We are especially indebted to Dr. Danil Prokhorov who worked long hours on the massive task of managing collection and reviews of papers and scheduling the presentations at the conference. Dr. Prokhorov also single-handedly worked to organize the Special Sessions, in effect handling the duties of Technical Chair and Program Chair. Prof. George Lendaris, as well as key members of the INNS Board of Governors, devoted considerable time and effort to helping us get the conference organized along the lines of past INNS/IEEE collaborations. Our friend and colleague, Dr. Lee Feldkamp, in a freelance role, suggested many strategies we implemented in putting together the conference program. Dr. Anya Tascillo served very well as the Publicity Chair and helped organize the Conference Website. She also initiated and carried out the T-shirt project. Prof. Carlo Morabito organized the tutorials on Sunday, while Prof. Larry Medsker took care of the local arrangements. Dr. Harold Szu, took the initiative in organizing the nominations and voting for this years Award Recipients. Many thanks to all of them!

We look forward to an exciting and productive conference.

Letter from the INNS President

On behalf of the International Neural Network Society, the IEEE Neural Network Council, and all the other sponsoring organizations -- which comprise virtually all of the major Neural Network professional organizations -- I wish to welcome you to the 2001 International Joint Conference on Neural Networks (IJCNN'01).

A great challenge lies ahead for those of us interested in the continued development and evolution of the (artificial) neural network computational paradigm -- or more generally, Computational Intelligence. While many of us in attendance at the IJCNN are engineers, computer scientists, physicists, mathematicians, statisticians, etc., we must maintain awareness that the key inspiration, insights and motivators for Computational Intelligence -- be it neural networks, fuzzy logic, genetic algorithms, etc. -- come from the study of biological systems and from the study of cognitive acts of animals and humans. Let us recall, while it is true that we learned how to fly only after we stopped imitating how birds fly, we learned to ask the important application-oriented questions of nature about how birds fly only after the first successful man-made aircraft were flown. It is important that a viable community of researchers and developers continue to function in a creative, interactive way to provide an environment for the possibility of learning more and more about and from the infinitely complex functioning of biological brain, and to translate this to applications of benefit to humankind.

It is troublesome to observe a decreasing attendance at conferences such as the IJCNN, and decreased subscriptions to the major NN and related journals. Paradoxically, however, this may be attributed to the SUCCESS of the NN computational paradigm in applications. Indeed, 10-15 years ago, the focus of funding from the commercial world contributed to enhancing the theoretical and engineering basis of the NN computational paradigm and figuring out what it was good for. In such a milieu, those interested in this emerging technology were looking for information in any venue they could: e.g., the big NN conferences and the major NN journals. In recent years, however, due to a plateau related to introduction of new theoretical foundation material, the focus of that community has turned to using the existing foundation for solving real engineering problems, and with great success!

There is evidence that neural network and other computational intelligence methods are being embedded into commercial applications in large numbers, with significantly reduced "fanfare" about it -- just as the embedding of conventional (Von Neuman) computer technology is no longer touted in any specific way. Reporting of such successful applications may now occur at conferences and in professional journals that focus on the application area -- be it financial systems, control systems, data mining, pattern recognition, signal processing, etc., etc. The resulting proliferation of venues for meeting, sharing, and discussing application-specific aspects of the NN technology appears to have had the above mentioned impact on attendance at the IJCNNs and the subscriptions to the major NN journals.

HOWEVER, we of the Neural Network community (and more generally, the Computational Intelligence community at large) must beware! It is important that a viable community of researchers be maintained who focus on continued study of the biological exemplar.

Application of the Computational Intelligence technologies to more and more complex and interesting problems stands to benefit substantially from fuller and fuller understanding of the natural biological neural networks. Research on the biological and cognitive aspects must continue, else the basis upon which the applications are to be developed will dry up. It is up to each of us to persuade our respective managements to continue funding an expansion of the underlying knowledge, and to enhance collaboration with the biological and cognitive oriented researchers.

While we are here at this conference, let us dialog about these issues, and expand the general awareness of the importance of encouraging an expanding collaboration between those interested in engineering and mathematical theory and ultimate applications, and those who will obtain applicable fundamental knowledge from the existing biological implementation of Intelligence.

Enjoy the conference,
George G. Lendaris, President, INNS

Welcome from the IEEE/NNC President

On behalf of the IEEE Neural Networks Council, it is my pleasure to welcome all participants to the 2001 International Joint Conference on Neural Networks to its beautiful and historical venue, Washington, D.C.

Once again, the Neural Networks Council is happy to cosponsor this important event with the International Neural Networks Society. We earnestly hope that you will benefit from IJCNN 2001 and that you will enjoy the many sights and attractions of the capital of the United States of America.

I would also like to acknowledge the cooperation of a vast array of international societies and institutions, including the European Neural Networks Society, the Japanese Neural Networks Society, the International Society for Optical Engineering, the American Association for Artificial Intelligence, the Russian Neural Networks Society, the Cognitive Science Society, and the Asia Pacific Neural Networks Assembly.

I want to congratulate the General Co-Chairs of IJCNN 2001, Ken Marko and Paul Werbos, for their efforts in putting together an event encompassing numerous tutorials, special sessions, plenary lectures, and technical competitions. Special thanks go to Danil Prokhorov, Technical Program Chair, Catherine Myers, and Mo-Yuen Chow, Technical Program Vice Chairs for having put together a comprehensive program spanning the many facets of the state of the art in neural-networks concepts and methods.

The strong, continued growth of our Council in recent years has made possible the implementation of several initiatives intended to benefit the technical communities within its scope of interest. Particularly noteworthy among these initiatives are student support programs, including Summer Research Grants, and financial help to attend major conferences such as IJCNN 2001. We look forward to continue and expand the scope of our technical and support activities to the scientific and engineering community.

We also look forward to the continuation of this series of conferences in coming years. The next edition of IJCNN, which will be part of the 2002 World Congress on Computational Intelligence (WCCI 2002), will encompass IJCNN 2002, the 2002 IEEE International Conference on Fuzzy Systems (FUZZ-IEEE 2002), and the 2002 Congress on Evolutionary Computation (CEC 2002). This will be the third time that these conferences are held together, following successful World Congresses in Orlando, Florida, in 1994, and Anchorage, Alaska, in 1998. The General Chair of WCCI 2002, Dr. David B. Fogel, together with the Vice-General Chair, Professor Mohamed A. El-Sharkawi, and the General Chairs of its component Conferences: Professor C. Lee Giles (IJCNN 2002), Professor Toshio Fukuda (FUZZ-IEEE 2002), and Professor Xin Yao (CEC 2002) join me in inviting you to participate in this encompassing event.

In closing, I would like to thank all INNS and IEEE volunteers that have contributed to the success of IJCNN 2001, and all participants whose support makes possible the continued activities of our Societies.

Enrique H. Ruspini
President

Monday, July 16, 2001

Biological Foundations, Session 1: Single Neuron, Small Circuit and Language Models

Chairs: John Taylor and Michael Denham

1.	A Synaptic Learning Rule Based on the Temporal Coincidence of Pre- and Postsynaptic Activity	1
	<i>Michael J. Denham, Susan L. Denham</i>	
3.	Rate Dynamics in Integrate-and-Fire Neurons: Two Regimes and Multiple Time Scales	7
	<i>Todd W. Troyer</i>	
5.	Learning Word Pronunciations Using a Recurrent Neural Network	11
	<i>Matthew J. Radio, James A. Reggia, Rita S. Berndt</i>	
61.	A Hybrid Neural Network and Virtual Reality System for Spatial Language Processing	16
	<i>Guillermina C. Martinez, Angelo Cangelosi, Kenny R. Coventry</i>	
62.	Synchronization of the Neural Response to Noisy Periodic Synaptic Input in a Balanced Leaky Integrate-and-Fire Neuron with Reversal Potentials	22
	<i>Anthony N. Burkitt</i>	
63.	Dynamical Threshold for a Feature Detector Neural Model	28
	<i>E. Chiarantoni, G. Fornarelli, F. Vacca, S. Vergura</i>	

Mathematical Foundations, Session 1: Neurocoding and Information Representation

Chair: José Principe

7.	New Geometrical Concepts in Fuzzy-ART and Fuzzy-ARTMAP: Category Regions	32
	<i>Georgios C. Anagnostopoulos, Michael Georgiopoulos</i>	
8.	A Categorical Semantic Analysis of ART Architectures	38
	<i>Michael J. Healy, Thomas P. Caudell</i>	
9.	A Novel Time-Based Neural Coding for Artificial Neural Networks with Bifurcating Recursive Processing Elements	44
	<i>Emilio Del Moral Hernandez</i>	
10.	Information Transfer through Classifiers and Its Relation to Probability of Error	50
	<i>Deniz Erdogmus, José C. Principe</i>	
11.	Separation of Deterministic and Stochastic Neurotransmission	55
	<i>Andrzej Pacut</i>	
64.	A Comparison Among Output Codification Schemes	61
	<i>Carlos Hernández-Espinosa, Mercedes Fernández-Redondo</i>	
65.	Generalization in the Hopfield Model	65
	<i>Leonid B. Litinskii</i>	
66.	Agent-Environment Approach to the Simulation of Turing Machines by Neural Networks	71
	<i>Wilson Rosa de Oliveira, Marçilio C.P. de Souto, Teresa B. Ludermir</i>	
67.	Kolmogorov Learning for Feedforward Networks	77
	<i>Roman Neruda, Arnošt Štědří, Jiřka Drkořová</i>	
68.	A Self-Organization Model of Feature Columns and Face Responsive Neurons in the Temporal Cortex	82
	<i>Takashi Takahashi, Takio Kurita</i>	

70.	Linear Separation Theorem in Distributional Clustering	88
	<i>Kazuya Takabatake</i>	
72.	Design of Neural Networks for Multi-Value Regression	93
	<i>Kwok-wai Lee, Tong Lee</i>	
73.	Emergence of Horizontal Cells Receptive Fields Spectral Properties by De-Correlation of Cones Spectral Response Functions	99
	<i>Michael U. Iniushin, Alexander A. Stankevich</i>	
74.	How does Our Neural System Represent an Object in Brain (Recognition-By-Element)	103
	<i>Tianzhen Wang</i>	

Learning Algorithms, Session 1: Supervised Learning

Chair: Lee Feldkamp

12.	Neural Network Training with the nprKF	109
	<i>Lee A. Feldkamp, Timothy M. Feldkamp, Danil V. Prokhorov</i>	
13.	The Need for Small Learning Rates on Large Problems	115
	<i>D. Randall Wilson, Tony R. Martinez</i>	
14.	A Complex EKF-RTRL Neural Network	120
	<i>Pedro Henrique Gouvêa Coelho</i>	
15.	Training Product Unit Networks using Cooperative Particle Swarm Optimisers	126
	<i>F. van den Bergh, A.P. Engelbrecht</i>	
16.	Fast Gaussian Process Regression Using Representative Data	132
	<i>Taku Yoshioka, Shin Ishii</i>	
75.	Backpropagation Algorithm with Sinusoidal Activation and Positive Couplings	cjyok@yahoo.com
	<i>J.Y. Chen, K.W. Wong, H.Y. Zheng, D.H. Guo, J.W. Shuai</i>	
76.	Number of Hidden Nodes for Shape Preserving ANN Representation of a Curve	138
	<i>L. Rawtani, J.L. Rana, A.K. Tiwari</i>	
78.	Comparative Analysis of Backpropagation and Extended Kalman Filter in Pattern and Batch Forms for Training Neural Networks	144
	<i>Shuhui Li</i>	
79.	Universal Learning Networks with Multiplication Neurons and its Representation Ability	150
	<i>Dazi Li, Kotaro Hirasawa, Jinglu Hu, Junichi Murata</i>	
80.	A New Adaptive Learning Algorithm Using Magnified Gradient Function	156
	<i>S.C. Ng, C.C. Cheung, S.H. Leung, A. Luk</i>	
81.	Input Data Clustering to Improve Neural Network Performance	160
	<i>Min Su, Mitra Basu</i>	
82.	Multilayer Feedforward Weight Initialization	166
	<i>Carlos Hernández-Espinosa, Mercedes Fernández-Redondo</i>	
83.	Temporal Differences Learning with the Conjugate Gradient Algorithm	171
	<i>Tasos Falas, Andreas-Georgios Stafylopatis</i>	

Artificial Systems in Hardware, Session 1

17.	Comparative Study of Implementing ICNNs on FPGAs	177
	<i>Ai Boon Lim, Jagath C. Rajapakse, Amos R. Omondi</i>	
18.	Massively Parallel Inner-Product Array Processor	183
	<i>Roman Genov, Gert Cauwenberghs</i>	
19.	Implementing a Fuzzy System on a Field Programmable Gate Array	189
	<i>Michael McKenna, Bogdan M. Wilamowski</i>	
20.	A Mixed Mode Self-Programming Neural System-on-Chip for Real-Time Applications	195
	<i>Khurram Waheed, Fathi M. Salam</i>	
21.	A Silicon Retina Calculating High-Precision Spatial and Temporal Derivatives	201
	<i>Seiji Kameda, Tetsuya Yagi</i>	
22.	An Effective Test Method for Digital Neural Networks	206
	<i>Érika Cota, Luigi Carro, Marcelo Lubaszewski</i>	
84.	Hardware Implementation of an On-Chip BP Learning Neural Network with Programmable Neuron Characteristics and Learning Rate Adaptation	212
	<i>Chun Lu, Bingxue Shi, Lu Chen</i>	
85.	Single-Electron Latching Switches as Nanoscale Synapses	216
	<i>Simon Fölling, Özgür Türel, Konstantin Likharev</i>	
87.	On-Chip Learning of FPGA-Inspired Neural Nets	222
	<i>Bernard Girau</i>	
88.	Specifications and FPGA Implementation of a Systolic Hopfield-Type Associative Memory	228
	<i>Ioan Z. Mihu, Remus Brad, Macarie Breazu</i>	
89.	Microprocessor Implementation of Fuzzy Systems and Neural Networks	234
	<i>Jeremy Binfet, Bogdan M. Wilamowski</i>	
91.	A Modified Algorithm for the Quadratic Assignment Problem Using Chaotic-Neuro-Dynamics for VLSI Implementation	240
	<i>Kentaro Tanaka, Yoshihiko Horio, Kazuyuki Aihara</i>	
92.	On Higher Order Noise Immune Perceptrons	246
	<i>Valeriu Beiu</i>	

Special Session 1: Environmental Data Processing and Interpretation by Means of Artificial Neural Networks

*Organizers: Roberto Tagliaferri, Salerno University, Italy,
Francesco Carlo Morabito, Reggio Calabria University, Italy*

22.1.	A Neural Network Based Identification System for VIRGO Seismic Noise	252
	<i>F. Acernese, F. Barone, R. De Rosa, A. Eleuteri, L. Milano, R. Tagliaferri</i>	
22.2.	Artificial Neural Systems for Verglass Forecast	258
	<i>M. Costa, E. Pasero</i>	
22.4.	Daily Rainfall Forecasting Using an Ensemble Technique Based on Singular Spectrum Analysis	263
	<i>Francesco Masulli, Daniela Baratta, Giovambattista Cicioni, Leonard Studer</i>	
22.6.	Use of Neural Network to Improve the Dispersion Models Performances: Proposal of an Advanced Methodology	269
	<i>A. Pelliccioni, T. Tirabassi</i>	

Biological Foundations, Session 2: Cortical Networks

Chairs: John Taylor and Michael Denham

23.	Attention as a Neural Control System	273
	<i>J. G. Taylor</i>	
24.	Evolving Columnar Circuitry for Lateral Cortical Inhibition	278
	<i>Douglas Ayers, James A. Reggia</i>	
25.	Diffusive Cooperation and Resource Limited Competition Based Receptive Field Model	284
	<i>Basabi Bhaumik, Mona Mathur</i>	
26.	The Required Measures of Phase Segregation in Distributed Cortical Processing	290
	<i>Cengiz Günay, Anthony S. Maida</i>	
27.	Topological Ordering in Neural Nets with Weak Nearest Neighbour Interactions	296
	<i>Valery Tereshko</i>	
94.	Simulation of Planar I/F Networks with Delayed Connections	302
	<i>Anthony S. Maida, Benjamin A. Rowland, Cengiz Günay</i>	
95.	Progressive Attractor Selection in Latent Attractor Networks	308
	<i>Simona Doboli, Ali A. Minai</i>	
96.	The Prediction-Irrelevance Problem in Grammar Learning	314
	<i>Rainer Spiegel, Fergal W. Jones, IPL McLaren</i>	
97.	Recurrent Neural Networks and Symbol Grounding	320
	<i>Rainer Spiegel, IPL McLaren</i>	
98.	A Study of Grammar Transfer in a Second Order Recurrent Network	326
	<i>Michiro Negishi, Stephen José Hanson</i>	
99.	Role of Unconditioned Stimulus Prediction in the Operant Learning: A Neural Network Model	331
	<i>S. E. Lew, C. Wedemeyer, B. S. Zanutto</i>	

Mathematical Foundations, Session 2: Optimization and Complexity Analysis

Chair: Johan Suykens

28.	Learning and Generalization by Coupled Local Minimizers	337
	<i>Johan A.K. Suykens</i>	
29.	Complexity of Regularization RBF Networks	342
	<i>Mark A. Kon, Leszek Plaskota</i>	
31.	On Complexity Analysis of Supervised MLP-Learning for Algorithmic Comparisons	347
	<i>Eiji Mizutani, Stuart E. Dreyfus</i>	
101.	Dynamics and Local Minima of a Simple Neural Network for Optimization	353
	<i>Kazuyoshi Tsutsumi, Kazuo Nakajima</i>	
102.	Theoretical Analysis of Hysteresis Quantized Hopfield Networks for Integer Programming	359
	<i>Satoshi Matsuda</i>	
103.	An Information Theoretic Methodology for Prestructuring Neural Networks	365
	<i>Bjorn Chambless, George G. Lendaris, Martin Zwick</i>	
104.	Solving Quadratic Programming Problems with Linear Hopfield Networks	371
	<i>Evgeny Dudnikov</i>	

106.	The Convergence and Parameter Relationship for Discrete-Time Continuous-State Hopfield Networks	376
	<i>Gang Feng, Christos Douligeris</i>	
107.	A Novel Concept for First Order Learning Algorithm Design	382
	<i>Peter Géczy, Shiro Usui</i>	

Learning Algorithms, Session 2: Unsupervised Learning

Chair: Jagath Rajapakse

32.	Unique ICA Solution by Eliminating Indeterminacy	388
	<i>Wei Lu, Jagath C. Rajapakse</i>	
33.	Multi-Resolution Distributed ART Neural Networks	peichen@northwestern.edu
	<i>Penny Pei Chen, Wei-Chung Lin</i>	
34.	Self-Organizing Map as a Probability Density Model	394
	<i>Timo Kostianen, Jouko Lampinen</i>	
35.	Improving the Performance of Symmetric Diffusion Networks via Biologically Inspired Constraints	400
	<i>David A. Medler, James L. McClelland</i>	
36.	A Perceptual Learning Model Based on Topological Representation	406
	<i>Mariofanna G. Milanova, Mark P. Wachowiak, Stuart Rubin, Adel S. Elmaghraby</i>	
37.	Independent Component Analysis by Convex Divergence Minimization: Applications to Brain fMRI Analysis	412
	<i>Yasuo Matsuyama, Shuichiro Imahara</i>	
108.	General Properties of the Generalised Lotto-Type Competitive Learning	418
	<i>Andrew Luk, Sandra Lien</i>	
109.	An Adaptive Short-Time Frequency Domain Algorithm for Blind Separation of Non-Stationary Convolved Mixtures	424
	<i>Ivica Kopriva, Zeljko Devic, Harold Szu</i>	
110.	A PCA Mixture Model with an Efficient Model Selection Method	430
	<i>Hyun-Chul Kim, Daijin Kim, Sung-Yang Bang</i>	
111.	A New Implementation of Discrete-Time Hopfield Net with Higher Capacity and Speed of Convergence	436
	<i>Mohammad B. Menhaj, Navid Seifipour</i>	
112.	A Pair-Channel Learning Algorithm with Constraints for Multi-Channel Blind Separation	nakayama@t.kanazawa-u.ac.jp
	<i>Kenji Nakayama, Akihiro Hirano, Takayuki Sakai</i>	
113.	Hierarchical SOM Applied to Image Compression	442
	<i>José M. Barbalho, A. Duarte D. Neto, José A.F. Costa, Márcio L.A. Netto</i>	
114.	A New Online Unsupervised Learning Rule for the BSB Model	448
	<i>Sylvain Chartier, Robert Proulx</i>	
115.	A Soft Probabilistic Neural Network for Implementation of Bayesian Classifiers	454
	<i>Mohammad B. Menhaj, Farshid Delgosha</i>	
116.	Feature Evaluation Using Quadratic Mutual Information	459
	<i>Dongming Xu, José C. Principe</i>	
117.	Frequency Domain Multichannel Blind Deconvolution Using Adaptive Spline Functions	464
	<i>Alessandro Lupini, Francesco Piazza, Mirko Solazzi, Aurelio Uncini</i>	

118.	A Growing Self-Organizing Algorithm for Dynamic Clustering	469
	<i>Ryuji Ohta, Toshimichi Saito</i>	

Intelligent Control, Session 1: Neurocontrol and System Identification

Chair: Paul Werbos

38.	Sliding Mode Control of Nonlinear Systems Using Gaussian Radial Basis Function Neural Networks	474
	<i>M. Önder Efe, Okyay Kaynak, Xinghuo Yu, Bogdan M. Wilamowski</i>	
39.	Reconfigurable Control System Design for Fault Diagnosis and Accommodation	480
	<i>Liang-Wei Ho, Gary G. Yen</i>	
41.	Intelligent Control of Critical Dimension in Photolithography Process	486
	<i>Habtom Ressim, Mohamad T. Musavi, Shafaat Khan</i>	
120.	A Neural Network Controller for Load Following Operation of Nuclear Reactors	491
	<i>Mehrdad N. Khajavi, Mohammad B. Menhaj, Amir A. Suratgar</i>	
121.	A New Robust Neural Network Controller Designing Method for Nonlinear Systems	497
	<i>Hongping Chen, Kotaro Hirasawa, Jinglu Hu, Junichi Murata</i>	
122.	A Modified PI Control Action with a Robust Adaptive Fuzzy Controller Applied to DC Motor	503
	<i>Naif B. Almutairi, Mo-Yuen Chow</i>	
123.	An Adaptive Neuro-Controller with Modified Chaotic Neural Networks	509
	<i>Sang-Hee Kim, Su-Dong Hong, Won-Woo Park</i>	
124.	Intelligent Control of Non-Linear Dynamical Systems with a Neuro-Fuzzy-Genetic Approach	515
	<i>Patricia Melin, Oscar Castillo</i>	
126.	Training Method of Robust Controllers against Stochastic Disturbance	hiroaki@kuaero.kyoto-u.ac.jp
	<i>Hiroaki Nakanishi, Koichi Inoue</i>	
127.	A Comparison of Neural Network Control Algorithms	521
	<i>Orlando De Jesús, Arjpolson Pukrittayakamee, Martin T. Hagan</i>	
128.	Real-Time Implementation of On-Line Trained Neuro-Controller for a BLDC Motor	527
	<i>M. M. Salem, Yousry Atia, M. B. Zahran, A. M. Zaki</i>	
129.	Model Reference Neural Control for a Variable Structure System by Output Feedback	532
	<i>Maria M. Goire, Moisés Bonilla, José M. Flores, Ieroham S. Baruch</i>	

Special Session 2: Neural Network Projects and Precollege Students

Organizer: Jesse L. Bemley, Joint Educational Facilities, Inc.

41.1.	Preparing Precollege Students for Neural Networks	538
	<i>Jesse L. Bemley</i>	
41.2.	Neural Networks and the XOR Problem	540
	<i>Jessye Bemley</i>	
41.3.	Fuzzy Nets: Fuzzy Logic and Neural Networks	544
	<i>Alexander Hawley</i>	
41.4.	Neural Networks and the Traveling Salesman Problem	547
	<i>Bryan Bemley</i>	

Pattern Recognition, Session 1: Automatic Target Recognition and Tracking

Chair: David Casasent

42.	Adaptive Activation Function Neural Net for Face Recognition	549
	<i>Ashit Talukder, David Casasent</i>	
43.	3D Object Recognition Using Perceptual Components	553
	<i>XiuWen Liu, Anuj Srivastava</i>	
45.	A Biological Model for Distortion-Invariant Target Recognition	559
	<i>Khan M. Iftekharuddin, Gregory Power</i>	
131.	Recognition of Object Orientation and Shape by a Rotation Spreading Associative Neural Network	565
	<i>Kiyomi Nakamura, Kazuya Arimura, Tadataka Yoshikawa</i>	
132.	Gender Recognition of Human Behaviors Using Neural Ensembles	571
	<i>Jungwon Ryu, Sung-Bae Cho</i>	
133.	Human Iris Detection Using Fast Cooperative Modular Neural Nets	577
	<i>Hazem M. El-Bakry</i>	
134.	Application of Neural Network to Gene Expression Data for Cancer Classification	583
	<i>Amadou Toure, Mitra Basu</i>	
135.	Hopfield Network for Affine Invariant Object Recognition	588
	<i>Wen-Jing Li, Tong Lee</i>	
136.	Invariant Pattern Location Using Unsupervised Color-Based Perceptual Organization and Graph-Based Matching	594
	<i>Wolfgang Pölzleitner</i>	
137.	A PCA Classifier and Its Application in Vehicle Detection	600
	<i>Junwen Wu, Xuegong Zhang</i>	
138.	A Linguistic Method of a Neuro-Fuzzy Adaptive Filter for Online Maneuvering Target Tracking	605
	<i>Mohammad B. Menhaj, Soheil Amani</i>	
139.	Goal Detection in Football by Using Support Vector Machines for Classification	611
	<i>N. Ancona, G. Cicirelli, A. Branca, A. Distantè</i>	

Mathematical Foundations, Session 3: Neurodynamics, Stability and Nonlinear Analysis

Chair: Robert Kozma

46.	A New Paradigm for Classification Tasks: The 'Race to the Attractor' Neural Network Model	617
	<i>Guy Ferland, Tet Yeap</i>	
47.	Analysis of Synchronous Phenomena in a Chaotic Spiking Oscillator with a Periodic Pulse-Train Input	623
	<i>Hidehiro Nakano, Toshimichi Saito</i>	
48.	Computing Iterative Roots with Second Order Training Methods	629
	<i>Lars Kindermann, Peter W Protzel</i>	
49.	Self-Organizing Ontogenetic Development for Autonomous Adaptive Systems - A Dynamic Perspective	633
	<i>Robert Kozma, Derek Harter, Walter J. Freeman, Stan Franklin</i>	
50.	The Effects of Spike-Timing-Dependent Synaptic Plasticity on Neural Network Dynamics	ohtasato@vega.ocn.ne.jp
	<i>Satoshi Ohta, Osamu Araki, Akito Sakurai</i>
