Introduction

This file contains approximately 24,000 names of substances which are known by trade names in the specialist literature. The list comprises synthetic materials (polymers), source materials (monomers) for polymers, and other substances which are important for the production or processing of polymers. In most cases names are Registered Trade Marks (RTM).

Listed with each trade name are:

- the chemical substance name
- the name of the producer (when stated in the literature)
- if available, the Chemical Abstracts Service (CAS) Registry Number.

In general, trade and substance names as well as the names of producers are reproduced as found in the literature.

The Registry Number (RN) is the identification number assigned by CAS to chemical compounds. It is followed by one of the notations **M**, **X**, **N** and **K**, which indicate the type of substance concerned.

M stands for a low-molecular substance with a defined molecular formula.

Example: Topanol CA (trade name)
1,1,3-tris-(2-methyl-4-hydroxy-5-tert-butylphenyl)butane
(chemical substance name)
ICI (producer)
1843-03-4 M (RN)

In the CA Formula Index this compound can be found at the molecular formula $C_{37}H_{52}O_3$.

X stands for a polymer that is listed in the CA Formula Index at the molecular formula of the monomers from which it is formed.

Example: Laroflex MP 45 (trade name)
vinyl chloride – isobutyl vinyl ether
copolymer
(chemical substance name)
BASF (producer)
25154-85-2 X (RN)

In the CA Formula Index this product can be found at the molecular formula $(C_6H_{12}O \cdot C_2H_3Cl)_x$.

N stands for a polymer that is listed in the CA Formula Index at the molecular formula of its structural repeating unit.

Example: Lexan (trade name)
bisphenol A polycarbonate
(chemical substance name)
General Electric (producer)
24936-68-3 N (RN)

In the CA Formula Index this product can be found at the molecular formula $(C_{16}H_{14}O_3)_n$.

K stands for a substance, whose structure is unknown and for which a molecular formula is not available.

Example: Zelec UN (trade name)
alcohol phosphate salt
(chemical substance name)
Du Pont (producer)
42610-78-6 K (RN)

Occasionally the same trade name is used for various substances of different chemical composition. In such cases all chemical substance names are listed.

Example: Polyglas (trade name)
(meth)acrylate polymer; polyester,
unsatd.; silicone
(chemical substance names)

In the list special characters range before letters which, in turn, appear before numbers. The latter are ordered according to their first digits (e.g. 11600 before 30). Blanks are treated as special characters.

AA 60003	9002-88-4 X	Absrom
