Note to Readers

Always use the latest Supplements

Supplements are published towards the end of each year and contain new and updated Entries derived from the primary literature of the preceding year. The second and subsequent Supplements have cumulative indexes derived from the Entries in all the Supplements. Searching the entire Supplement series will be facilitated by consulting first the indexes in the latest Supplement.

New Compounds for the Dictionary

The Editor is always pleased to receive comments on the selection policy and in particular welcomes specific suggestions for compounds or groups of compounds to be considered for inclusion in the Supplements.

Third Supplement

Introduction

For detailed information about how to use the *Dictionary* see the Introduction in Volume 1 of the Main Work.

1. Using the Supplement

As in the Main Work volumes, every Entry is numbered to assist ready location. The Entry Number consists of a metal element symbol followed by a five-digit number. In this third Supplement the first digit is invariably 3. Cross-references within the text to Entries having numbers beginning with zero refer to Main Work Entries.

Where a Supplement Entry contains additional or corrected information referring to an Entry in the Main Work, the whole Entry is reprinted, with the accompanying statement 'Updated Entry replacing . . .'. In such cases, the new Entry contains all of the information which appeared in the corresponding Main Work Entry, except for any which has been deliberately deleted. There should therefore be no necessity for the reader to consult the Main Work.

Chemical Names

Names reported in Chemical Abstracts since 1981 are labelled with the suffix 11CI. It is possible however that some further changes may take place before the publication of the 11th Collective Index covering the period 1982-86.

2. Literature Coverage

In compiling this Supplement the primary literature has been surveyed to mid 1986 and a considerable amount of information from later literature has also been included. In accordance with our policy of continually enhancing the usefulness of the *Dictionary*, a number of other compounds have been added for the first time. Some of these were suggested by users, to whom we are grateful.

3. Sources of Further Information

The following selected references to recent books and review articles provide more information about various aspects of organometallic chemistry. Together with references given in the Introduction to the Main Work and the First Supplement, they cover the literature up to mid 1986.
