Preface

These proceedings contain the refereed papers and posters presented at the 28th Annual European Conference on Information Retrieval (ECIR 2006), which was held at Imperial College London in South Kensington between April 10 and 12, 2006. ECIR is the annual conference of the British Computer Society's Information Retrieval Specialist Group. The event started its life as a colloquium in 1978 and was held in the UK each year until 1998, when the event took place in Grenoble, France. Since then the venue has alternated between the UK and Continental Europe. In the last decade ECIR has grown to become the major European forum for the discussion of research in the field of information retrieval.

ECIR 2006 received 177 paper and 73 poster submissions, largely from the UK (18%) and Continental Europe (50%), but we had many sub-missions from further afield including America (7%), Asia (21%), Middle East and Africa (2%), and Australasia (2%). In total 37 papers and 28 posters were accepted, and two papers were converted to posters. All contributions were reviewed by at least three reviewers in a double anonymous process and then ranked during a Programme Committee meeting with respect to scientific quality and originality. It is a good and healthy sign for information retrieval in general, and ECIR in particular, that the submission rate has more than doubled over the past three years. The downside, of course, is that many high-quality submissions had to be rejected owing to a limited capacity of the conference.

ECIR has always been popular with research students and established researchers alike, and this year 73% of the accepted papers and 66% of the accepted posters turned out to have a research student as their main author. The 67 accepted publications span a wide range of cutting-edge themes ranging from formal models (5) over document & query representation and text understanding (5), design and evaluation (8), topic identification and news retrieval (3), user interests and workspaces (5), clustering and classification (8), refinement and feedback (4), performance and peer-to-peer networks (4), Web search (3), structure/XML (6), multimedia (8), cross-language retrieval (6) to genomic information retrieval (2).

We are greatly indebted to the reviewers who spent a great deal of their time giving useful feedback, ensuring the high quality and standard of the selected publications and adhering to rather tight deadlines. We thank the Prize Committee for identifying the very best publications. Thanks go to our platinum sponsors EPSRC, European Information Retrieval Specialist Group of CEPIS, Google, and GCHQ; our golden sponsors Microsoft Research Cambridge, Yahoo Research Barcelona, Sharp Laboratories of Europe, Apriorie, and Lemur Consulting; and our silver sponsors the Multimedia Knowledge Management Network, Imperial College London, Queen Mary, University of London, and Elsevier. Together, the sponsors provided a significant amount of money that, amongst

other things, helped more than 40 students to attend the conference. We are immensely grateful to David Hawking, who agreed to come all the way from Canberra, Australia, to give the keynote talk on Enterprise Search. Last, not least, we thank our universities Imperial College London, City University and Queen Mary, University of London, and the countless local helpers at each place who ensured the smooth organization of ECIR 2006.
