Preface

This volume describes more than 1600 construction and structural adhesives, sealants and related products which are currently available for industrial, commercial and consumer usage. The book will be of value to industrial, technical and managerial personnel involved in the specification and use of these products. It has been compiled from information received from more than 100 industrial companies and other organizations.

The adhesive and sealant products described in the book can be used for major construction and structural applications as well as in commercial businesses, schools, offices and by the home-repair handyman. The products can be applied to such diverse materials as concrete, ceramics, vinyl, polyethylene, foamed plastics, wood, plywood, fiberboard, gypsum board, prefinished panels, leather, and cotton.

The data included represent selections from manufacturers' descriptions, made at no cost to, nor influence from, the makers or distributors of these materials. Only the most recent information has been included. It is believed that all of the products listed here are currently available, which will be of utmost interest to readers concerned with product discontinuances.

Products are presented by company, and the companies are listed alphabetically. The table of contents is organized in such a way as to serve as a subject index to the book. Also included is a Trade Name Index for rapid location of products by the reader.

A section of Sample Formulations representative of these products is included. In addition, another useful section contains the Suppliers' Addresses. Both of these sections can be found immediately following the Product Information section.

The book lists the following product information, as available, in the manufacturer's own words:

- (1) Company name and product category.
- (2) Trade name and product numbers.
- (3) Product description: A description of the product, as presented by the supplier.

My fullest appreciation is expressed to the companies and organizations who supplied the data included in this book.

Ernest W. Flick

NOTICE

To the best of our knowledge the information in this publication is accurate; however the Publisher does not assume any responsibility for the accuracy or completeness of, or consequences arising from, such information. This industrial guide does not purport to contain detailed user instructions, and by its range and scope could not possibly do so. Mention of trade names or commercial products does not constitute endorsement or recommendation for use by the Publisher.

Adhesive and sealant raw materials can be toxic, and therefore due caution should always be exercised in the use of potentially hazardous materials. Final determination of the suitability of any information or product for use contemplated by any user, and the manner of that use, is the sole responsibility of the user. We strongly recommend that users seek and adhere to a manufacturer's or supplier's current instructions for handling each material they use.
