## PREFACE

Liquid filtration is a fundamental unit operation extensively practiced throughout the chemical process, petroleum and allied industries. Technically, it involves the separation, removal and collection of a discrete phase of matter existing in a dispersed or colloidal state in suspension. This separation is most often performed in the presence of a complex media structure in which physical, physicochemical and/or electrokinetic forces interact.

Filtration as applied to liquid process streams can be for the purposes of recovering a valuable discrete phase product; recovering valuable continuum or liquid phase product; preconditioning either liquid process streams or solid, semisolid or emulsion phase materials; or removing unwanted discrete phase contaminants that may damage downstream process equipment or be harmful to the receiving/discharge environment.

Because of the diversified range of applications and properties of suspensions handled, a multitude of filtration equipment and techniques has evolved. Unfortunately, due to the complex hydrodynamics of filtration and its auxiliary operations, equipment design, selection and implementation are often confusing. Existing design methodologies are, for the most part, empirical. This empiricism has often led to mis-design or the implementation of equipment whose actual performance has fallen below anticipated operating demands.

This book is a state-of-the-art review of liquid filtration in the chemical process and allied industries. Interpretations of the phenomenological observations of the hydrodynamics of filtration are given in the hopes of establishing more theoretical and generalized bases for design methodology. Specific design and selection criteria are reviewed, and typical industrial problems and their solutions are presented. This volume marks the second in the series entitled *Chemical and Process Equipment Design*.

Several chapters have been prepared by specialists. These include Paul N. Cheremisinoff and Angelo LaMendola of New Jersey Institute of Technology (Chapter 14 on reverse osmosis), and Theodore Meltzer, Howard Green, Robert Williams and Charles Gelman of Gelman Sciences Inc. (Chapters 12,

13 and 15 on microporous membrane filtration and microfiltration). Finally, the authors extend their heartfelt gratitude to the many organizations that contributed time and materials to this volume.

Nicholas P. Cheremisinoff  
David S. Azbel

Cheremisinoff

Azbel

**Nicholas P. Cheremisinoff** heads the Reactor and Fluid Dynamics Modelling Group in the Chemical Engineering Technology Division of Exxon Research and Engineering Company, Florham Park, New Jersey. His research and engineering activities involve atomization, fluid bed reactor design, shale oil development, coal gasification, instrumentation development, and process equipment design and enhancement. Dr. Cheremisinoff received his BS, MS and PhD in Chemical Engineering from Clarkson College of Technology. He is the author of several Ann Arbor Science books, including *Cooling Towers: Selection, Design and Practice*; *Fluid Flow: Pumps, Pipes and Channels*; and *Gasohol for Energy Production*. In addition, he is the author of numerous papers and is a member of several professional and honor societies including AIChE, Tau Beta Pi and Sigma Xi.

**David S. Azbel** is Professor of Chemical Engineering at the University of Missouri-Rolla. He was previously Research Professor at the State University of New York at Stony Brook and Visiting Professor at the University of Minnesota. From 1966 to 1972 he was Professor of Chemical Engineering at the All-Union Polytechnical Institute (Moscow, USSR); from 1961 to 1965, Chief of the Technology Department of the Organic and Synthetic Products Research Institute (Moscow, USSR); previously he was project chief at the Chemical Engineering Research Institute and Petrochemical Research Institute (Irkutsk, Siberia, USSR). Dr. Azbel graduated from Moscow Institute of Chemical Engineering and received his Doctor of Science degree from Mendelev Institute of Chemical Technology, Moscow, USSR. Dr. Azbel's engineering, design, research and teaching span the broadest range of chemical, petroleum and nuclear experience.

## CONTENTS

<b>1. Hydrodynamics of Flows Through Porous Media . . . . .</b>	<b>1</b>
Properties of Porous Media . . . . .	1
Equations of Motion . . . . .	6
Incompressible Flow Through Nonideal Media . . . . .	10
Two-Dimensional Steady Flow . . . . .	17
 <b>2. Introduction to Filtration . . . . .</b>	 <b>29</b>
Types of Liquid Filtration . . . . .	29
Filter Media . . . . .	30
Cake Formation . . . . .	31
Filtration Conditions . . . . .	32
Washing and Dewatering Stages . . . . .	33
General Considerations in Filtration Intensification and Filter Selection . . . . .	34
Filtration Objectives . . . . .	35
Preparation Stages for Filtration . . . . .	37
Precoat and Filter Aids . . . . .	37
Coagulation . . . . .	37
Temperature Control . . . . .	38
pH . . . . .	38
Methodology of Equipment Selection . . . . .	38
Filtration Abstracts . . . . .	40
 <b>3. Governing Laws of Cake Filtration . . . . .</b>	 <b>51</b>
Filtration Analysis . . . . .	54
Rate of Filtration . . . . .	59
Constant-Pressure Filtration . . . . .	61
Constant-Rate Filtration . . . . .	67

Variable-Rate and -Pressure Filtration . . . . .	69
Constant-Pressure and -Rate Filtration . . . . .	75
<b>4. Governing Laws of Filter-Medium Filtration . . . . .</b>	<b>79</b>
Constant-Pressure-Drop Filtration . . . . .	79
Single-Particle Blockage . . . . .	79
Multiparticle Blockage . . . . .	81
Intermediate Filtration . . . . .	84
Mechanisms of Filtration . . . . .	85
Constant-Rate Filtration . . . . .	89
Generalized Equations . . . . .	91
Effects of Particle Settling Rate and Concentration . . . . .	93
Experimental Observations of Pore-Blocked Filtration . . . . .	94
<b>5. Application of Filter Aids . . . . .</b>	<b>103</b>
Filter Aid Requirements . . . . .	104
Filter Aid Applications . . . . .	105
Properties of Typical Filter Aids . . . . .	106
Diatomite . . . . .	106
Perlite . . . . .	107
Asbestos . . . . .	107
Cellulose . . . . .	108
Sawdust . . . . .	108
Charcoal . . . . .	108
Fly Ash . . . . .	108
Experimental Methods for Filter Aid Selection . . . . .	108
Rules for Precoat Filter Aids . . . . .	123
<b>6. Filter Media . . . . .</b>	<b>127</b>
Flexible Filter Media . . . . .	128
Asbestos Cloths . . . . .	131
Glass Cloths . . . . .	131
Cotton Cloths . . . . .	131
Wool Cloths . . . . .	133
Paper Pulp and Fiber Cloths . . . . .	133
Rubber Media . . . . .	134
Synthetic Fiber Cloths . . . . .	134
Flexible Metallic Media . . . . .	135

Metallic/Nonmetallic Cloths . . . . .	142
Nonwoven Media . . . . .	142
Rigid Filter Media . . . . .	143
Fixed Rigid Media . . . . .	143
Loose Rigid Media . . . . .	151
Filter Media Selection . . . . .	153
<b>7. Cake Washing . . . . .</b>	<b>159</b>
Single-Stage Displacement Cake Washing on Batch Filters . . . . .	160
Single-Stage Displacement Cake Washing on Continuous Filters . . . . .	170
Multistage Displacement Cake Washing on Continuous Filters . . . . .	180
Multistage Dilution Cake Washing on Batch Filters . . . . .	182
Multistage Dilution Cake Washing on Continuous Filters . . . . .	184
Step-by-Step Cake Washing . . . . .	184
Countercurrent Cake Washing . . . . .	189
Multistage Displacement and Dilution for Cake Washing on Continuous Filters . . . . .	195
Rate of Cake Washing . . . . .	196
Practical Calculations of Displacement Cake Washing on Batch and Continuous Filters . . . . .	197
Example Problems . . . . .	198
<b>8. Cake Dewatering . . . . .</b>	<b>207</b>
Cake Moisture Distribution . . . . .	207
Cake Saturation . . . . .	211
Cake Saturation vs Dewatering Time . . . . .	214
Motive Fluid Volume . . . . .	216
Batch and Continuous Filter Dewatering . . . . .	220
Thermal Dewatering . . . . .	222
<b>9. Design Equations for Optimum Filtration . . . . .</b>	<b>225</b>
Governing Equations . . . . .	225
Optimum Capacity of Batch Filters at Constant Rate . . . . .	234
Case 1 . . . . .	234
Case 2 . . . . .	235
Maximum Capacity of Batch Filters at Variable Pressure Differences and Rates . . . . .	237
Optimum Filtration Cycle . . . . .	239
Continuous Filter Capacity . . . . .	240

<b>10. Summary of Graphical Analysis Techniques . . . . .</b>	<b>245</b>
Material Balance Approach . . . . .	245
