The publication of the physical data of the Sadtler Standard Spectra and the Sadtler Commercial Spectra is intended to be descriptive. The samples of the materials represented have come generally from other sources than our own laboratories and frequently without the donors' knowledge of their part in this publication.

On the other hand every effort is made by Sadtler Research Laboratories, a division of Bio-Rad Laboratories, Inc. to assure the reliability of the published spectra. When improved data is available or errors are called to our attention we revise and reissue the proper replacement spectra.

SADTLER RESEARCH LABORATORIES, A DIVISION OF BIO-RAD LABORATORIES, INC. DOES NOT WARRANT MERCHANTABILITY OR FITNESS FOR ANY PARTICULAR PURPOSE, OR MAKE ANY OTHER WARRANTY OR AGREEMENT EXPRESS OR IMPLIED WITH RESPECT TO THE SPECTRA CONTAINED HEREIN. IF ANY MODEL OR SAMPLE WAS SHOWN TO BUYER, SUCH MODEL OR SAMPLE WAS USED MERELY TO ILLUSTRATE THE ARTICLE AND NOT TO REPRESENT THAT ANY SPECTRA CONTAINED HEREIN WOULD CONFORM TO THE MODEL OR SAMPLE.

DYES, PIGMENTS, AND STAINS INFRARED SPECTRA

Introduction to Volumes 1 through 9

This total collection contains 2700 infrared reference spectra; volumes 1, 2, 7, 8 and 9 contain infrared grating spectra, volumes 3, 4, 5 and 6 contain infrared prism spectra. The four volumes of prism spectra are now reissued and renumbered as part of the total publication, prior to this the prism spectra were available as a separate collection.

The types of materials included in this publication represent stains commonly used in biological work, coal tar colors certified by the Food and Drug Administration and many other dyes and pigments listed in the Technical Manual of the American Association of Textile Colorists and Chemists.

The spectra in this supplement were prepared on a Digilab FTS-14 Fourier transform spectrophotometer in the spectral region 4000 cm^{-1} to 400 cm^{-1} and are presented on a linear transmittance vs. frequency (wavenumber) format. Spectra previously published in this collection were prepared on a Perkin-Elmer 621 instrument or, in the special case of Volumes 3, 4, 5 and 6, a prism spectrophotometer. The prism spectra were determined in the 2 to 15 micron spectral region on a prism spectrophotometer and the curves recorded on transmittance vs. linear wavelength charts.

Each spectrogram is labelled with the trade name of the product, the source of supply and the sample preparation procedure used in running the spectrum. Descriptive information supplied by the manufacturer is also shown on the spectrum. An alphabetical index of the materials according to trade name and generic name is furnished with the collection. The generic names are obtained from the FDA or Color Index Classification. The column titled GRATING in the index shows the spectrum number of each material in this total publication, entries in the PRISM column refer to the spectrum number of the material in the prism spectra publication.

Many of the acid, mordant, basic, food and direct dyes were also studied in the ultraviolet/visible region, 200 - 800 $\text{m}\mu$. This collection of spectra is available in a separate publication.
