# Foreword

In the short space of about a decade, Commercial-off-the-Shelf (COTS) software has evolved from a relatively minor aspect of software development; a top-management-endorsed silver bullet solution for software development; a disruptive technology requiring people and organizations to extensively rethink their approaches to software development; to an increasingly well-understood software phenomenon for which effective solutions are being developed.

Part of this understanding has been to recognize that different COTS application sectors can be at different stages of this evolution. Some sectors are just beginning to become COTS-intensive. Some have evolved COTS solutions that are very well matched to their problem domain. Others, including most large-scale applications, still involve their developers in rethinking how to adapt their traditional software architectures, processes, management practices, and personnel skills to accommodate economically attractive but complex combinations of powerful but incompletely compatible and independently evolving COTS products.

The series of International Conferences on COTS-Based Software Systems (ICCBSS) was established as a continuing forum for bringing together CBSS developers, suppliers, and researchers to summarize and discuss progress toward understanding and resolving CBSS problems. This year's conference theme, "Matching Solutions to Problems," reflected this objective. We were fortunate to have three outstanding keynote speakers, David Carr, Tricia Oberndorf, and Douglas Schmidt, who have contributed significantly both in analyzing CBSS problems and developing better CBSS solutions.

The contributed papers and summaries of workshops, panels, and tutorials in these proceedings give a good understanding of the nature and directions of evolution of CBSS problems and solutions. As has been my experience with previous ICCBSS proceedings volumes, I believe that you will find lasting value in the content of the proceedings.

I would like to express a special note of thanks to all of the members of the ICCBSS 2004 organizing committee, program committee, and individual committees listed in the proceedings. Their capable and dedicated volunteer efforts are what continues to make the ICCBSS series a timely and useful experience and contribution toward improved CBSS practices. I would also like to thank the Northrop Grumman Corporation for its sponsorship of ICCBSS 2004, and the overall sponsoring organizations of the ICCBSS series: the Canadian National Research Council, the CMU Software Engineering Institute, the European Software Institute, and the USC Center for Software Engineering.

January 2004

Barry Boehm

## Preface

Welcome to the proceedings of the 3rd *International Conference of COTS-Based Software Systems*. The conference is still young, but it is vital and growing fast. This year there were a total of 57 submissions on all aspects of COTS, with about 60% of these coming from the United States and the remainder from Europe and Asia. Equally encouraging, we had about equal numbers of submissions coming from academia and industry. This shows that ICCBSS is hitting our target audience—both practitioners and researchers interested in the effective use of COTS.

The specific program statistics are as follows:

- 4 tutorials submitted
- 3 tutorials accepted
- 4 panels submitted
- 3 panels accepted
- 10 experience presentations submitted
- 8 experience presentations accepted
- 39 refereed papers submitted
- 17 refereed papers accepted
- 2 invited workshops

We were uniformly impressed with the high quality and broad scope of these submissions. There were about an equal number of technically focused and managerially oriented submissions whose topics generally fell into three tracks: COTS Product Evaluation and Selection, COTS-Based System Definition and Development, and COTS-Based System Evolution and Management.

The superb quality of the submissions and the invited workshops continues to indicate the importance and interest in COTS-Based system development and issues. With this trend, ICCBSS 2005 will prove to be even more exciting!

Dan Port, Rick Kazman

# Organization

## ICCBSS 2004 Conference Committee

### Planning Committee

<b>General Chair</b>	Barry Boehm (University of Southern California)
<b>Program Chairs</b>	Ceci Albert (Software Engineering Institute) Dan Port (University of Hawaii)
<b>Proceedings Chairs</b>	Rick Kazman (University of Hawaii) Dan Port (University of Hawaii)
<b>Tutorials Chair</b>	Sergio Bandinelli (European Software Institute)
<b>Panels Chair</b>	Ioana Rus (University of Maryland)
<b>Posters Chair</b>	Hakan Erdogmus (National Research Council Canada)
<b>Publicity Chairs</b>	Lisa Brownsword (Software Engineering Institute) David Morera (European Software Institute) Mark Vigder (National Research Council Canada)
<b>Finance &amp; Local Arrangements</b>	Hal Hart (Northrop Grumman)
<b>Chair Emeritus</b>	John Dean (National Research Council Canada)

### Program Committee

Cecilia C. Albert – Software Engineering Institute, USA  
Sergio Bandinelli – European Software Institute, Spain  
David M. Bennett – POWERflex Corporation, Australia  
David P. Bentley – South Carolina Research Authority, USA  
Ljerka Beus-Dukic – University of Westminster, UK  
Jørgen Bøegh – DELTA, Danish Electronics, Light & Acoustics, Denmark  
Pere Botella – Universitat Politècnica de Catalunya, Barcelona, Spain  
William G. Chismar – University of Hawaii, USA  
Daniel Dumas – IBM Belgium Software Group, Belgium  
Anthony Earl – Sun Microsystems Inc., USA  
Suellen Eslinger – The Aerospace Corporation, USA  
Rose F. Gamble – University of Tulsa, USA  
Suzanne M. Garcia – Software Engineering Institute, USA  
Anatol Kark – National Research Council Canada, Canada  
Rick Kazman – University of Hawaii and SEI, USA  
David Klappholz – Stevens Institute of Tech. & New Jersey CSE, USA  
Ron Kohl – R.J. Kohl & Associates, USA  
Lech Krzanik – University of Oulu, Finland  
Grace A. Lewis – Software Engineering Institute, USA

Fred Long – University of Wales, Aberystwyth

Mike Looney – University of Portsmouth, UK

Ray Madachy – University of Southern California, USA

Jean-Christophe Mielnik – Thales Research & Technologies, France

Maurizio Morisio – Politecnico di Torino, Italy

Diane Mularz – MITRE Corp., USA

Michael Ochs – Fraunhofer Institute for Experimental Software Engineering, Germany

Jim Odrowski – Component Wave, Inc., USA

Dan Port – University of Hawaii, USA

Marco Torchiano – Computer and Control Dept., and Politecnico di Torino, Italy

Mark Vigder – National Research Council Canada, Canada

Göran V. Grahn - Volvo Information Technology, Sweden

# **Using eCots Portal for Sharing Information about Software Products on the Internet and in Corporate Intranets**

Jean-Christophe Mielnik<sup>1</sup>, Vincent Bouthors<sup>2</sup>, Stéphane Laurière<sup>3</sup>, and Bernard Lang<sup>3</sup>

<sup>1</sup>Thales Research and Technology, France

<sup>2</sup>Jalios, France

<sup>3</sup>INRIA, France

The growing use of COTS software components instead of in-house developments brings non-negligible loss of control of the systems in which they are used, and increases dependency on COTS components' producers, particularly critical in the case of obsolescence. This loss of control and dependency can be compensated only by extremely reliable, accurate and continuously updated knowledge of the software component market and its trends. It is a matter of factual data, not subjected to interpretation, on both the actors (producers, distributors and consulting companies) and the products in this market. These data must be processed on technical, commercial, economical, financial, and legal dimensions. Most industrial groups now try to organize the collection of COTS information to make it available in-house, but the effort is considerable due to the size and variability of the software component market and the difficulty in collecting and updating information. This assessment and selection phase is consequently a hard task for enterprises, particularly for SMEs, which cannot invest enough time or money into COTS management to gain qualified information. Although specialized companies dedicated to technological analysis and market monitoring can bring help in the process of collecting software descriptions, the analysis they provide are often expensive and short-lived. In addition, this information market has not developed a standard for COTS description. This tutorial will describe eCots, a platform that gathers on a common mutualized portal the raw data on COTS products that is held both by producers and by the very large community of COTS users.

# Testing Component-Based Software – Issues, Challenges, and Solutions

Jerry Zeyu Gao<sup>1</sup> and Ye Wu<sup>2</sup>

<sup>1</sup>San Jose State University, USA

<sup>2</sup>George Mason University, USA

Many regard widespread development and reuse of software components as one of the next biggest phenomena for software. However, widespread reuse of a software component with poor quality may lead to disasters. Improper reuse of software components of good quality may also be disastrous. Testing and quality assurance is therefore critical for both software components and component-based software systems. This tutorial provides an in-depth look at the technical issues, challenges, managerial aspects, and needs in testing of components and systems. Moreover, this tutorial reports on the recent advances and research efforts in developing new solutions to solve those problems and meet those needs, from the perspectives of component-based software engineering. The tutorial will discuss the state-of-the-art practice, issues, and challenges, new solutions and research efforts in third-party component testing, component-based program validation, and test automation. The targeted audience includes technical managers, software testing engineers, quality assurance people, and development engineers who are working on component-based software projects. The tutorial will be useful for professionals, researchers, and students interested in understanding the general concepts and methods in component testing and component-based software validation. This tutorial assumes that participants have a general understanding of software engineering and software testing methods, and have some working experience in software development and validation.
