Handbook of Logic and Proof Techniques for Computer Science

To little Hypatia, who doesn't seem to be very logical.

Preface

Logic is, and should be, the core subject area of modern mathematics. The blueprint for twentieth century mathematical thought, thanks to Hilbert and Bourbaki, is the axiomatic development of the subject. As a result, logic plays a central conceptual role. At the same time, mathematical logic has grown into one of the most recondite areas of mathematics. Most of modern logic is inaccessible to all but the specialist.

Yet there is a need for many mathematical scientists—not just those engaged in mathematical research—to become conversant with the key ideas of logic. *The Handbook of Mathematical Logic*, edited by Jon Barwise, is in point of fact a handbook written by logicians for other mathematicians. It was, at the time of its writing, encyclopedic, authoritative, and up-to-the-moment. But it was, and remains, a comprehensive and authoritative book for the *cognoscenti*. The encyclopedic *Handbook of Logic in Computer Science* by Abramsky, Gabbay, and Maibaum is a wonderful resource for the professional. But it is overwhelming for the casual user. There is need for a book that introduces important logic terminology and concepts to the working mathematical scientist who has only a passing acquaintance with logic. Thus the present work has a different target audience.

The intent of this handbook is to present the elements of modern logic, including many current topics, to the reader having only basic mathematical literacy. Certainly a college minor in mathematics is more than sufficient background to read this book. Specifically, courses in linear algebra, finite mathematics, and mathematical structures would be more than adequate preparation. From the computer science side, it would be good if the reader knew a programming language and had some exposure to issues of complexity and decidability. But all these prerequisites are primarily for motivation. This handbook is, to the extent possible, self-contained. It will be a compact and accessible reference.

This is not a textbook; it is a handbook. It contains very few proofs. What it does contain are definitions, examples, and discussion of all of the key ideas in basic logic. We also include cogent and self-contained in-

tructions to critical advanced topics, including Gödel's completeness and incompleteness theorems, methods of proof, cardinal and ordinal numbers, the continuum hypothesis, the axiom of choice, model theory, number systems and their construction, multi-valued logics, category theory, universal algebra, proof theory, fuzzy set theory, recursive functions, **NP**-completeness, decision problems, Boolean algebra, semantics, decision problems, and the word problem.

This book is intended to be a resource for the working mathematical scientist. The computer scientist or engineer or system scientist who must have a quick sketch of a key idea from logic will find it here in self-contained form, accessible to a quick read. In addition to critical terminology, notation, and ideas, references for further reading are provided. There is a thorough index, a glossary, a lexicon of notation, a guide to the literature, and an extensive bibliography.

There is no other book like this one on the subject of logic and its allied areas. This book is both a reference and a portal to further study of topics in logic. A scientist reading a technical tract in another field and encountering an unfamiliar term or concept from logic can turn to this volume and find a rapid introduction to the key points. The book will be a useful reference both for working scientists and for students.

Certainly computer science is one of the most active areas of modern scientific activity that uses logic. This book has been written with computer scientists in mind. Important ideas, such as recursion theory, decidability, independence, completeness, consistency, model theory, **NP**-completeness, and axiomatics are presented here in a form that is particularly accessible to computer scientists. Examples from computer science are provided whenever possible. A special effort has been made to cut through the mathematical formalism, difficult notation, and esoteric terminology that are typical of modern mathematical logic. The treatment of any key topic is quick, incisive, and to the point.

Although this is a handbook of logic, it is not strictly logical in nature. By this we mean that it is virtually impossible to present all of the topics of this great tapestry in a strictly logical order. For that reason, topics have been repeated or presented in unusual sequence when convenient for local use.

Birkhäuser engaged a number of experts to review various versions of this project and to help prepare it for publication. These reviewers patiently guided me regarding both form and substance. Their criticisms and remarks have been invaluable. Of course, responsibility for all remaining errors and malapropisms resides entirely with the author.

It is hoped that this work will stimulate the communication between computer science and mathematics, and also be a useful handbook for both fields. It is safe to say that computer science is becoming ever more mathematical and also that mathematics is becoming increasingly com-

fortable with the use of computers. This book should serve as a catalyst in both activities. It is both a touchstone for a first look at topics in logic and an invitation to further reading. We hope that it will awaken in others the fascination with logic that we have experienced for more than a quarter century.

Steven G. Krantz
St. Louis, Missouri

Contents

| | |
|---|----------|
| Preface | xvii |
| 1 Notation and First-Order Logic | 1 |
| 1.1 The Use of Connectives | 1 |
| 1.1.1 Elementary Statements | 1 |
| 1.1.2 Connectives | 2 |
| 1.1.3 Redundancy of the Connectives | 3 |
| 1.1.4 Additional Connectives | 3 |
| 1.2 Truth Values and Truth Tables | 4 |
| 1.2.1 Rules for Truth Values and Tables | 4 |
| 1.2.2 Multivalued Logics | 5 |
| 1.2.3 Modal Logic | 6 |
| 1.2.4 Compound Sentences and Truth Values | 6 |
| 1.2.5 Tautologies and Contradictions | 7 |
| 1.2.6 Contrapositives | 8 |
| 1.3 The Use of Quantifiers | 8 |
| 1.3.1 “For All” and “There Exists” | 8 |
| 1.3.2 Relations Between “For All” and “There Exists” | 9 |
| 1.3.3 The Propositional and the Predicate Calculus | 9 |
| 1.3.4 Derivability | 10 |
| 1.3.5 Semantics and Syntax | 11 |
| 1.3.6 A Consideration of First-Order Theories | 11 |
| 1.3.7 Herbrand’s Theorem | 12 |
| 1.3.8 An Example from Group Theory | 13 |
| 1.4 Gödel’s Completeness Theorem | 13 |
| 1.4.1 Provable Statements and Tautologies | 13 |
| 1.4.2 Formulation of Gödel’s Completeness Theorem | 14 |
| 1.4.3 Additional Terminology | 15 |
| 1.4.4 Some More Formal Language | 15 |
| 1.4.5 Other Formulations of Gödel Completeness | 15 |

| | | |
|----------|--|-----------|
| 1.4.6 | The Compactness Theorem | 16 |
| 1.4.7 | Tautological Implication and Provability | 16 |
| 1.5 | Second-Order Logic | 17 |
| 1.5.1 | Semantics | 17 |
| 2 | Semantics and Syntax | 19 |
| 2.1 | Elementary Symbols | 20 |
| 2.1.1 | Formal Systems (Syntax) | 20 |
| 2.2 | Well-Formed Formulas or wffs [Syntax] | 21 |
| 2.3 | Free and Bound Variables (Syntax) | 21 |
| 2.4 | The Semantics of First-Order Logic | 21 |
| 2.4.1 | Interpretations | 21 |
| 2.4.2 | Truth | 22 |
| 2.4.3 | First-Order Theories | 22 |
| 2.4.4 | A Proof System for First-Order Logic | 22 |
| 2.4.5 | Two Fundamental Theorems | 23 |
| 3 | Axiomatics and Formalism in Mathematics | 25 |
| 3.1 | Basic Elements | 26 |
| 3.1.1 | Undefinable Terms | 26 |
| 3.1.2 | Description of Sets | 26 |
| 3.1.3 | Definitions | 26 |
| 3.1.4 | Axioms | 28 |
| 3.1.5 | Lemmas, Propositions, Theorems, and Corollaries | 29 |
| 3.1.6 | Rules of Logic | 30 |
| 3.1.7 | Proofs | 31 |
| 3.2 | Models | 31 |
| 3.2.1 | Definition of Model | 31 |
| 3.2.2 | Examples of Models | 31 |
| 3.2.3 | Finite Model Theory | 32 |
| 3.2.4 | Minimality of Models | 32 |
| 3.2.5 | Universal Algebra | 33 |
| 3.3 | Consistency | 33 |
| 3.3.1 | Definition of Consistency | 33 |
| 3.4 | Gödel's Incompleteness Theorem | 33 |
| 3.4.1 | Introductory Remarks | 33 |
| 3.4.2 | Gödel's Theorem and Arithmetic | 33 |
| 3.4.3 | Formal Enunciation of Arithmetic | 34 |
| 3.4.4 | Some Standard Terminology | 34 |
| 3.4.5 | Enunciation of the Incompleteness Theorem | 35 |
| 3.4.6 | Church's Theorem | 35 |
| 3.4.7 | Additional Formulations of Incompleteness | 36 |
| 3.4.8 | Relative Consistency | 36 |

| | | |
|----------|--|-----------|
| 3.5 | Decidability and Undecidability | 37 |
| 3.5.1 | Introduction to Decidability | 37 |
| 3.5.2 | Recursive Equivalence; Degrees of Recursive Unsolvability | 37 |
| 3.6 | Independence | 37 |
| 3.6.1 | Introduction to Independence | 37 |
| 3.6.2 | Examples of Independence | 38 |
| 4 | The Axioms of Set Theory | 39 |
| 4.1 | Introduction | 40 |
| 4.2 | Axioms and Discussion | 40 |
| 4.2.1 | Axiom of Extensionality | 40 |
| 4.2.2 | Sum Axiom | 40 |
| 4.2.3 | Power Set Axiom | 40 |
| 4.2.4 | Axiom of Regularity | 41 |
| 4.2.5 | Axiom for Cardinals | 41 |
| 4.2.6 | Axiom of Infinity | 41 |
| 4.2.7 | Axiom Schema of Replacement | 41 |
| 4.2.8 | Axiom of Choice | 42 |
| 4.3 | Concluding Remarks | 42 |
| 5 | Elementary Set Theory | 43 |
| 5.1 | Set Notation | 44 |
| 5.1.1 | Elements of a Set | 44 |
| 5.1.2 | Set-Builder Notation | 44 |
| 5.1.3 | The Empty Set | 44 |
| 5.1.4 | Universal Sets and Complements | 45 |
| 5.1.5 | Set-Theoretic Difference | 45 |
| 5.1.6 | Ordered Pairs; the Product of Two Sets | 46 |
| 5.2 | Sets, Subsets, and Elements | 46 |
| 5.2.1 | The Elements of a Set | 46 |
| 5.2.2 | Venn Diagrams | 47 |
| 5.3 | Binary Operations on Sets | 48 |
| 5.3.1 | Intersection and Union | 48 |

| 5.5.3 Examples of Equivalence Relations and Classes | 53 |
| 5.5.4 Construction of the Rational Numbers | 54 |
| 5.6 Number Systems | 55 |
| 5.7 Functions | 56 |
| 5.7.1 What Is a Function? | 56 |
| 5.7.2 Examples of Functions | 56 |
| 5.7.3 One-to-One or Univalent | 57 |
| 5.7.4 Onto or Surjective | 58 |
| 5.7.5 Set-Theoretic Isomorphisms | 59 |
| 5.8 Cardinal Numbers | 59 |
| 5.8.1 Comparison of the Sizes of Sets | 59 |
| 5.8.2 Cardinality and Cardinal Numbers | 60 |
| 5.8.3 An Uncountable Set | 61 |
| 5.8.4 Countable and Uncountable | 63 |
| 5.8.5 Comparison of Cardinalities | 64 |
| 5.8.6 The Power Set | 64 |
| 5.8.7 The Continuum Hypothesis | 65 |
| 5.8.8 Martin’s Axiom | 66 |
| 5.8.9 Inaccessible Cardinals and Measurable Cardinals | 67 |
| 5.8.10 Ordinal Numbers | 67 |
| 5.8.11 Mathematical Induction | 69 |
| 5.8.12 Transfinite Induction | 69 |
| 5.9 A Word About Classes | 70 |
| 5.9.1 Russell’s Paradox | 70 |
| 5.9.2 The Idea of a Class | 70 |
| 5.10 Fuzzy Set Theory | 71 |
| 5.10.1 Introductory Remarks About Fuzzy Sets | 71 |
| 5.10.2 Fuzzy Sets and Fuzzy Points | 71 |
| 5.10.3 An Axiomatic Theory of Operations on Fuzzy Sets | 72 |
| 5.10.4 Triangular Norms and Conorms | 74 |
| 5.11 The Lambda Calculus | 75 |
| 5.11.1 Free and Bound Variables in the λ -Calculus | 80 |
| 5.11.2 Substitution | 80 |
| 5.11.3 Examples | 81 |
| 5.12 Sequences | 82 |
| 5.13 Bags | 82 |

| | |
|--|-----------|
| 6 Recursive Functions | 85 |
| 6.1 Introductory Remarks | 85 |
| 6.1.1 A System for Number Theory | 86 |
| 6.2 Primitive Recursive Functions | 86 |
| 6.2.1 Effective Computability | 87 |
| 6.2.2 Effectively Computable Functions and p.r. Functions | 87 |
| 6.3 General Recursive Functions | 87 |
| 6.3.1 Every Primitive Recursive Function Is General Recursive | 89 |
| 6.3.2 Turing Machines | 89 |
| 6.3.3 An Example of a Turing Machine | 90 |
| 6.3.4 Turing Machines and Recursive Functions | 90 |
| 6.3.5 Defining a Function with a Turing Machine | 91 |
| 6.3.6 Recursive Sets | 91 |
| 6.3.7 Recursively Enumerable Sets | 92 |
| 6.3.8 The Decision Problem | 92 |
| 6.3.9 Decision Problems with Negative Resolution | 93 |
| 6.3.10 The μ -Operator | 93 |
| 7 The Number Systems | 95 |
| 7.1 The Natural Numbers | 95 |
| 7.1.1 Introductory Remarks | 95 |
| 7.1.2 Construction of the Natural Numbers | 96 |
| 7.1.3 Axiomatic Treatment of the Natural Numbers | 97 |
| 7.2 The Integers | 97 |
| 7.2.1 Lack of Closure in the Natural Numbers | 97 |
| 7.2.2 The Integers as a Set of Equivalence Classes | 98 |
| 7.2.3 Examples of Integer Arithmetic | 98 |
| 7.2.4 Arithmetic Properties of the Negative Numbers | 98 |
| 7.3 The Rational Numbers | 98 |
| 7.3.1 Lack of Closure in the Integers | 98 |
