Lecture Notes in Artificial Intelligence 3554

Edited by J. G. Carbonell and J. Siekmann

Subseries of Lecture Notes in Computer Science

Preface

Context is of crucial importance for research and applications in many disciplines, as evidenced by many workshops, symposia, seminars, and conferences on specific aspects of context. The International and Interdisciplinary Conference on Modeling and Using Context (CONTEXT), the oldest conference series focusing on context, provides a unique interdisciplinary emphasis, bringing together participants from a wide range of disciplines, including artificial intelligence, cognitive science, computer science, linguistics, organizational science, philosophy, psychology, ubiquitous computing, and application areas such as medicine and law, to discuss and report on context-related research and projects.

Previous CONTEXT conferences were held in Rio de Janeiro, Brazil (1997), Trento, Italy (1999, LNCS 1688), Dundee, UK (2001, LNCS 2116), and Palo Alto, USA (2003, LNCS 2680). CONTEXT 2005 was held in Paris, France during July 5–8, 2005.

There was a strong response to the CONTEXT 2005 Call for Papers, with 120 submissions received. A careful review process assessed all submissions, with each paper first reviewed by the international Program Committee, and then reviewer discussions were initiated as needed to assure that the final decisions carefully considered all aspects of each paper. Reviews of submissions by the Program Chairs were supervised independently and anonymously, to assure fair consideration of all work. Out of the 120 submissions, 23 were selected as full papers for oral presentation, and 20 were selected as full papers for poster presentation. These outstanding papers are presented in this proceedings.

In addition to the papers presented here, the conference featured a rich program including invited talks and panel sessions, posters of late-breaking work, system demonstrations, a doctoral consortium, and workshops whose results are published in a separate volume.

We would like to thank the members of the Program Committee and all of our additional reviewers for their careful work in assuring the quality of the technical program. We would also like to thank the members of the Organizing Committee, and especially Patrick Brezillon, Organizing Committee Chair, for their tireless efforts; Elisabetta Zibetti, Workshops Chair, for organizing an exceptional workshops program; Chiara Ghidini for putting together an inaugural Doctoral Consortium; Leslie Ganet, Denesh Douglas and Christine Leproux for the wonderful website; and the Steering Committee for their guidance. Special thanks are due to Laure Leger and Mary Bazire for their preparation of this proceedings.

In addition, we would like to thank all the chairs, co-chairs and the many volunteers involved in making CONTEXT 2005 a successful conference. The conference is also grateful to the AAAI, the Association Francaise pour le Contexte, CNRS, the Cognition et Usages Laboratory, FLAIRS, the Laboratory of Computer

VI Preface

Sciences, Paris 6, Nokia, Paris 8 University, Pierre and Marie Curie University, RISC, Supelec, and The University of Maine for their generous assistance to the conference.

We hope that the contributions reported here will illustrate the rich range of current contributions to context, and will provide a foundation for drawing on the best work from many areas in the next generation of research on context.

Organization

CONTEXT 2005 was hosted at the Pierre and Marie Curie University, Paris 6
<http://www.context-05.org/>

- Conference Chair* Roy Turner (University of Maine, USA)
- Program Co-chairs* Anind Dey (Carnegie Mellon University, USA)
Boicho Kokinov (New Bulgarian University, Bulgaria)
David Leake (Indiana University, USA)
- Managing Editors* Mary Bazire (University of Paris 8, France)
Laure Léger (University of Paris 8, France)

Organizing Committee

- Chairs* Patrick Brézillon (University of Paris 6, France)
Jean-Charles Pomerol (University of Paris 6, France)
Charles Tijus (University of Paris 8, France)
- Members*
- Web Site Management*
- Christine Leproux (University of Paris 8, France)
Leslie Ganet (University of Paris 8, France)
Denesh Douglas (University of Paris 6, France)
- Communication Management*
- Chantal Perrichon (University of Paris 6, France)
Virginie Amiache (University of Paris 6, France)
Hind Boumlak (University of Paris 8, France)
- Workshop Management*
- Elisabetta Zibetti (University of Paris 8, France)
Isabel Urdapilleta (University of Paris 8, France)
Patrick Yeu (University of Paris 8, France)
- Doctoral Consortium Management*
- Chiara Ghindini (ITC-IRST, Italy)
Bich-Liên Doan (France)
- Poster and Demonstration Session Management*
- Anind Dey (Carnegie Mellon University, USA)
Jean-Marc Meunier (University of Paris 8, France)
- Volunteers Management*
- Jean-Marc Meunier (University of Paris 8, France)
Lionel Médini (University of Lyon 1, France)
- Publicity Chair*
- Aline Chevalier (University of Paris 10, University of Paris 8, France)

Program Committee

- Aamodt Agnar (NTNU, Norway)
Akman Varol (Bilkent U., Turkey)

Acknowledgments

We would particularly like to thank the FLAIRS society, and especially Susan Haller, John Kolen and Zdravko Markov for their authorization to use the FLAIRS-04 Website as initial version for the CONTEXT-05 Website.

We also thank Brigitte Bricout, graphic designer at the University of Paris 6 for the realization of the poster of the conference, and A. Jeanne-Michaud for the photos on the poster.

We thank very much Nina Runge and Daphne Batamio for their enthusiastic support during the Web site development from June to September 2004.

We thank finally the volunteers who helped us enthusiastically before, during and after this event.

Abstract. The aim of this paper is to present an approach to modelling and using the context of learning in intelligent learning environments. The approach developed allows the modelling of the content and dynamics of learning situations and the way situations develop as a consequence of interactions. Situation models are used to support two aspects of intelligent learning environments: evaluation of learning, taking into consideration the context of learning activity, and adaptation of the learning environment to the learner's perceived needs, taking into consideration the affordances of learning contexts. The main focus of the paper is on the description of the formalism developed to support context modelling in intelligent learning environments. An application of the approach in a system to support learning of software engineering concepts is briefly described.

1 Introduction

Contemporary theories of learning stress that learning requires the development of active experiences in authentic contexts. According to these theories, learning cannot be separated from activity and an essential part of what is learned is the situation in which learning takes place, which refers to the physical as well as to the social context in which the learner is engaged in activity [1], [2], [3].

The implication of this view to the design of systems to support learning is that the computational learning environments must provide interactive situations for the learner in which the conceptual, physical and social aspects of these contexts are addressed in ways that create possibilities for learning.

Moreover, in order that an intelligent system can reason about the learning experiences developed in a situation, so that it can adapt the learning opportunities to the particular needs of the learner, the characteristics of the situation as well as the information about the interaction developed in the situation must be modelled and explicitly represented in the system.

Therefore, a formalism to represent the context of learning interactions and the interactions that happen in this context is needed. This formalism can inherit some characteristics of formalisms developed to represent context in other artificial intelligence research in which contextual representations are sought for different purposes,
