## Preface

*Middleware systems* comprise programming models, abstractions, protocols, and services to facilitate the design, the development, the integration, and the deployment of distributed applications in heterogeneous computing environments. Conceptually, the term “middleware” refers to a layer of software above the networking substrate and the operating system and below the (distributed) application. In practice these boundaries are not clear cut, with middleware functionality moving into and out of these layers. Remote communication, publish/subscribe, messaging, and (distributed) transaction constitute examples of common middleware abstractions and services.

Middleware research encompasses, builds on and extends a wide spectrum of concepts, techniques and ideas from a broad range of fields, including programming languages, distributed systems, operating systems, networking, and data management.

Following the success of the past conferences in this series in the Lake District, UK (1998), in Palisades, NY (2000), in Heidelberg, Germany (2001), and in Rio de Janeiro, Brazil (2003), the 5th International Middleware Conference in Toronto, Canada aimed to be the premier conference for middleware research and technology in 2004. The broad scope of the conference included the design, the implementation, the deployment, and the evaluation of distributed systems platforms and architectures for emerging computing environments. The conference gave an overview of research on middleware for peer-to-peer computing, middleware for mobility, middleware for replication and transactions, on publish/subscribe systems, on routing protocols and overlay networks, on application servers, resource management, and software engineering, and on Web services.

This year, the technical program of Middleware drew from 194 submitted papers, among which 13 were explicitly submitted as work-in-progress papers. At the program committee meeting on Saturday and Sunday, June 5th and 6th in Toronto, 25 research papers and 1 invited paper were selected for presentation at the conference. Two, as research papers designated submissions, were recommended for inclusion in the conference’s work-in-progress paper program. The work-in-progress paper committee selected 6 papers among the 13 submitted and the 2 recommended papers for inclusion in the program. The paper selection was based on the papers’ technical merit, originality, projected impact on the field, and pertinence to the scope of the conference. Each research paper was reviewed by at least three reviewers. A PC-authored paper (i.e., one or more authors on the paper was a Middleware committee member) was reviewed by at least four reviewers.

Finally, I would like to express my deepest gratitude to the authors of submitted papers, to all program committee members for their active participation in the paper review and selection process, to all external reviewers for their help in evaluating submissions, to Mark Hau and Microsoft Research for providing us

with the Conference Management System and support, and finally to the members of the organizing committee and the steering committee for their efforts towards making Middleware 2004 a successful conference.

- iOverlay*: A Lightweight Middleware Infrastructure  
for Overlay Application Implementations . . . . . 135  
*Baochun Li, Jiang Guo, and Mea Wang*

## Middleware for Replication and Transactions

- Ganymed: Scalable Replication for Transactional Web Applications . . . . . 155  
*Christian Plattner and Gustavo Alonso*

Adaptive Middleware for Data Replication ..... 175  
*Jesús M. Milan-Franco, Ricardo Jiménez-Peris,  
Marta Patiño-Martínez, and Bettina Kemme*

Alternative Edge-Server Architectures  
for Enterprise JavaBeans Applications ..... 195  
*Avraham Leff and James T. Rayfield*

Transparent Information Dissemination ..... 212  
*Amol Nayate, Mike Dahlin, and Arun Iyengar*

**Publish/Subscribe**

An Ontology-Based Publish/Subscribe System ..... 232  
*Jinling Wang, Beihong Jin, and Jing Li*

Meghdoot: Content-Based Publish/Subscribe over P2P Networks ..... 254  
*Abhishek Gupta, Ozgur D. Sahin, Divyakant Agrawal,  
and Amr El Abbadi*

Subscription Propagation  
in Highly-Available Publish/Subscribe Middleware ..... 274  
*Yuanyuan Zhao, Daniel Sturman, and Sumeer Bhola*

**Web Services:  
Composition, Integration and Interoperability**

Composition of Coordinated Web Services ..... 294  
*Stefan Tai, Rania Khalaf, and Thomas Mikalsen*

Adaptive Resource Sharing in a Web Services Environment ..... 311  
*Vijay K. Naik, Swaminathan Sivasubramanian, and Sriram Krishnan*

Interoperability Among Independently Evolving Web Services ..... 331  
*Shankar R. Ponnekanti and Armando Fox*

**Middleware for Mobility**

SyD: A Middleware Testbed for Collaborative Applications  
over Small Heterogeneous Devices and Data Stores ..... 352  
*Sushil K. Prasad, Vijay Madiseti, Shamkant B. Navathe,  
Raj Sunderraman, Erdogan Dogdu, Anu Bourgeois, Michael Weeks,  
Bing Liu, Janaka Balasooriya, Arthi Hariharan, Wanxia Xie,
