THE INSTITUTE OF ELECTRICAL AND ELECTRONICS ENGINEERS, INC.

Foreword

The "Proceedings of the 1985 IEEE International Conference on Robotics and Automation" presents a truly comprehensive picture of research in robotics and its application to automation. The enthusiastic response to our call for papers shows that this second in a series of conferences fills a longstanding need for a broad-based, research-oriented conference in robotics and advanced automation.

The depth of the papers included in this proceedings clearly indicates that robotics is rapidly maturing into an independent field with important results of its own. The variety of approaches in the papers also shows that robotics is a truly interdisciplinary area, where electrical and mechanical engineering, computer science, mathematics, and other disciplines must interact closely. The need for the interaction of many disciplines that are traditionally separate represents one of the greatest challenges, and potential rewards, of robotics research.

The diversity of backgrounds among researchers in robotics and automation has led to a bewildering variety of avenues for dissemination of research results. As a result, it is nearly impossible to keep track of research across the whole field. This problem is particularly severe for students and newcomers into the field. It is our hope that this series of conferences will help improve the technical communication between the different segments of the research community in robotics and automation. We hope that this conference will become a central forum for interaction among the various disciplines.

Conference Committee

General Conference Committee

Chairperson: K.S. Fu
Purdue University

Vice-Chairperson: Michael A. Wesley
IBM Thomas J. Watson Research Center

Program Chairperson: Tomas Lozano-Pérez
MIT Artificial Intelligence Laboratory

Local Arrangement Chairperson: T.J. Tarn
Washington University

Publication Chairperson: C.S.G. Lee
University of Michigan

Publicity Chairperson: Mark W. Spong
Cornell University

Registration Chairperson: Andrew L. Oldroyd
Washington University

Secretary: S. Ahmad
Purdue University

Treasurer: Harry Hayman

Table of Contents

Session 1A: Three Dimensional Machine Vision

A Vision System with 3D Capabilities.....	2
<i>J. Amat and V. Llarío</i>	
Two View Motion Analysis, Stereo Vision and a Moving Camera's Positioning Their Equivalence and a New Solution Procedure.....	6
<i>X. Zhuang and R.M. Haralick</i>	
Three-Dimensional Vision Techniques for an Advanced Robot System	11
<i>Y. Kuno, H. Numagami, M. Ishikawa, H. Hoshino, and M. Kidode</i>	
Using Chebyshev Polynomials for Interpreting Structured Light Images	17
<i>M.O. Shneier, W.S. Rutkowski, and T.-H. Hong</i>	

Session 1B: Machine Vision in Robotics

Contour Tracing for Precision Measurement.....	22
<i>K.A. Dunkelberger and O.R. Mitchell</i>	
Object Recognition Using Multiple Views.....	28
<i>H.-S. Kim, R.C. Jain, and R.A. Volz</i>	
Shape Detection Using Range Data.....	34
<i>X. Lin and W.G. Wee</i>	
An Intelligent Robot Vision System for Research Applications	40
<i>J. McMillen and O.R. Mitchell</i>	

Session 1C: Object Recognition and Localization

Recognizing Partially Hidden Objects.....	48
<i>J.L. Turney, T.N. Mudge, and R.A. Volz</i>	
A Vision System to Identify Occluded Industrial Parts.....	55
<i>M.W. Koch and R.L. Kashyap</i>	
Recognition and Localization of Overlapping Parts from Sparse Data in Two and Three Dimensions.....	61
<i>W.E.L. Grimson and T. Lozano-Pérez</i>	
Efficient New Techniques for Identification and 3D Attitude Determination of Space Objects from a Single Image	67
<i>B. Bamieh and R.J.P. De Figueiredo</i>	

Session 1D: Visual Ranging

A New Development in Camera Calibration Calibrating a Pair of Mobile Cameras.....	74
<i>A. Izaguirre, P. Pu, and J. Summers</i>	
Passive Ranging to Known Planar Point Sets	80
<i>Y. Hung, P.-S. Yeh, and D. Harwood</i>	
A Ranging Method Based on Triangulation for Robotic Control	86
<i>E. Baumgartner and G. Saridis</i>	
Accurate Remote Measurement of Robot Trajectory Motion	92
<i>A. Dainis and M. Juberts</i>	
Parallel/Pipelined Processor Dedicated to Visual Recognition.....	100
<i>I. Masaki</i>	

Session 2A: Interpreting Ultrasonic Range Data

Locating Object Surfaces with an Ultrasonic Range Sensor	110
<i>M.K. Brown</i>	

High Resolution Maps from Wide Angle Sonar.....	116
<i>H.P. Moravec and A. Elfes</i>	
A Spatial Representation System for Mobile Robots.....	122
<i>D. Miller</i>	
Dynamic World Modeling for an Intelligent Mobile Robot Using a Rotating Ultra-Sonic Ranging Device	128
<i>J.L. Crowley</i>	
Session 2B: Navigation for Mobile Robots	
Position Referencing and Consistent World Modeling for Mobile Robots	138
<i>R. Chatila and J.-P. Laumond</i>	
Simulation of Path Planning for a System with Vision and Map Updating	146
<i>E. Koch, C. Yeh, G. Hillel, A. Meystel, and C. Isik</i>	
Multi-Goal Real-Time Global Path Planning for an Autonomous Land Vehicle Using a High-Speed Graph Search Processor.....	161
<i>A.M. Parodi</i>	
Natural Decomposition of Free Space for Path Planning	168
<i>D.T. Kuan, J.C. Zamiska, and R.A. Brooks</i>	
Session 2C: Expert Systems in Manufacturing	
Logic-Based Factory Design.....	176
<i>E.L. Fisher</i>	
The Application of a Knowledge-Based System to Design for Manufacture.....	182
<i>N.-H. Chao</i>	
Automated Process Planning and Expert Systems	186
<i>M.C. Wu and C.R. Liu</i>	
A Rule-Based Decision System for the Robotization of Metal Laser Cutting	192
<i>L. Foulloy, D. Kechemair, B. Burg, E. Lamotte, and B. Zavidovique</i>	
Session 2D: Space Applications of Robotics and Automation	
Future Uses of Machine Intelligence and Robotics for the Space Station	200
<i>A. Cohen and J.D. Erickson</i>	
Computer Control of Space-Borne Teleoperators with Sensory Feedback.....	205
<i>S. Lee, G. Bekey, and A.K. Bejczy</i>	
A Decision Tree for Inflight Data Processing for Robot Spacecraft Trajectory Guidance	215
<i>A.M. Chandé and R.W. Newcomb</i>	
An Expert System for the Planning and Scheduling of Astronomical Observations	221
Session 3A: Manipulator Design	
Geometric Optimization of Manipulator Structures for Working Volume and Dexterity	228
<i>R. Vijaykumar, M.J. Tsai, and K. J. Waldron</i>	
Mobility and Controllability Characteristics of Mobile Robotic Platforms	237
<i>K.J. Waldron</i>	
Kinematic and Static Characterization of Wrist Joints and Their Optimal Design.....	244
<i>H. Asada and J.A. Cro Granito</i>	
A Method for the Design of Hybrid Position/Force Controllers for Manipulators Constrained by Contact with the Environment	251
<i>H. West and H. Asada</i>	

Session 3B: Control of Manipulators with Sensory Feedback

Historical Perspective and State of the Art in Robot Force Control	262
<i>D.E. Whitney</i>	
The Effect of Wrist Force Sensor Stiffness on the Control of Robot Manipulators.	269
<i>R.K. Roberts, R.P. Paul, and B.M. Hillberry</i>	
Optimal Actuator Stiffness Distribution for Robotic Manipulators Based on Local Dynamic Criteria	275
<i>M. Thomas, H.C. Yuan-Chou, and D. Tesar</i>	
Using Gripper Mounted Infrared Proximity Sensors for Robot Feedback Control	282
<i>D.J. Balek and R.B. Kelley</i>	

Session 3C: Manipulator Motion Control

Tuning of a Multivariable Controller for a Robot Manipulator.....	290
<i>J. Sorvari and H.N. Koivo</i>	
A Multiprocessor for Dynamic Control of Multilink Systems	295
<i>Y.F. Zheng and B.R. Chen</i>	
The Design of a Computer Controlled Planar Manipulator.....	301
<i>T. Nye and R.J. Cipra</i>	
Second Order Nonlinear Kinematic Effects, and Their Compensation.....	307
<i>S. Ahmad</i>	

Session 3D: Design and Control

Optimal Compliance Design for Grinding Robot Tool Holders.....	316
<i>H. Asada and N. Goldfine</i>	
Design and Control of a Redundant Mechanism for Small Motion.....	323
<i>J.K. Salisbury and J.D. Abramowitz</i>	
A Planar XY Robotic Fine Positioning Device.....	329
<i>R.L. Hollis</i>	
Kinematics of Workpart Fixturing.....	337
<i>H. Asada and A.B. By</i>	
Kinematics and Open-Loop Control of an Ilonator-Based Mobile Platform	346
<i>D.J. Daniel, B.H. Krogh, and M.B. Friedman</i>	

Session 4A: CAD Systems

Software Environments for CAD Systems	354
<i>L.R. Nackman</i>	
Relational Data Base Support for Interactive Graphics (extended abstract).....	358
<i>D.R. Warn</i>	
Abstract Data Types for CAD Systems	359
<i>D.L. Spooner, M.J. Wozny, and M.S. Shephard</i>	
An Architecture for Graphics Application Development.....	365
<i>D.J. Kasik</i>	

Session 4B: CAD Science

*Smart CAD Systems.....	372
<i>M. Melkanof</i>	
Issues in Conditional Tolerances for CAD Systems.....	373
<i>V. Srinivasan and R. Jayaraman</i>	
A CAD System for Designing Robotic Manipulators	376
<i>K. Lee and D.A. Tortorelli</i>	
*Representation, Manipulation, and Reasoning About Physical Objects	381
<i>J. Hopcroft</i>	

Session 4C: CAD Applications

Data-Driven Robotic Assembly: Retaining Accuracy Through Process and Software Techniques.....

384

J.D. Swansey

Issues in CAD-Based Robot Programming.....

388

R.B. Tilove

CAD-Based Manufacture of Parts.....

389

G.A. McAlpine

*CAD Applications.....

391

M. Chace

Session 4D: Panel Discussion--CAD into CAM

Moderator: M. Wesley; Panelists: J. Boyse, M. Melkanof, and J. Eiseley

Session 5A: Segmentation of Range Images

Segmentation of Three-Dimensional Images.....

396

W.E. Snyder and G. Bilbro

Geometric Matcher for Recognizing and Positioning 3-D Rigid Objects from

Passive Stereo Data.....

404

O. Faugeras, N. Ayache, and B. Faverjon

Reasoning About Three-Dimensional Space.....

405

D. Kapur, J. Mundy, D. Musser, and P. Narendran

CAGD Based 3-D Vision.....

411

B. Bhanu and T.C. Henderson

Session 5B: Models from Range Data

Toward a Surface Primal Sketch.....

420

J. Ponce and M. Brady

Generating Detailed Scene Descriptions from Range Images.....

426

M. Herman

The Determination of Next Best Views.....

432

C.I. Connolly

Finding Points of High Curvature and Critical Curves from a Volume Model.....

436

J.R. Stenstrom

Session 5C: Visual Inspection for Industry

EYESEE: A Machine Vision System for Inspection of Integrated Circuit

Chips.....

444

M.L. Baird

IRRIS: An Image Registration, Recognition, and Inspection System.....

449

L.N. Kanal and B.A. Lambird

Comparing the Laplacian Zero Crossing Edge Detector with the Second

Directional Derivative Edge Detector.....

452

R.M. Haralick

The Significance of Lighting in Industrial Inspection Tasks.....

458

R. Freeling

Session 5D: Industrial Machine Vision

A Morphological Approach to Finished Surface Inspection.....

462

S.R. Sternberg

*A Generic Switch Parts Recognition System.....

466

R. Aggarwal

Automatic Visual Inspection of Solder Joints.....

467

P. Besl, E. Delp, and R. Jain

A Preliminary Study of Automated Inspection of VLSI Resist Patterns	474
<i>C.C. Li, J.F. Mancuso, D.B. Shu, Y.N. Sun, and L.D. Roth</i>	
Automatic Optical Thorough Hole Inspection Method for Printed Wiring Boards Using Leakage Light Detection	481
<i>M. Ando, K. Mita, and T. Inagaki</i>	
Session 6A: Collision Detection and Avoidance	
A Study of the Clash Detection Problem in Robotics	488
<i>S. Cameron</i>	
Coordinating the Motions of Robot Arms in a Common Workspace	494
<i>J. Roach and M. Boaz</i>	
Real-Time Obstacle Avoidance for Manipulators and Mobile Robots.....	500
<i>O. Khatib</i>	
A Hierarchical-Orthogonal-Space Approach to Collision-Free Path Planning.....	506
<i>E.K. Wong and K.S. Fu</i>	
Session 6B: Algorithmic Motion Planning	
Algorithmic Motion Planning in Robotics: Coordinated Motion of Several Disks Amidst Polygonal Obstacles	514
<i>G. Ramanathan and V.S. Alagar</i>	
Movement Coordination for Single-Track Robot Systems.....	523
<i>M.A. Langston and C.E. Kim</i>	
A Voronoi Method for the Piano-Movers Problem	530
<i>J. Canny</i>	
On Motion Planning with Six Degrees of Freedom: Solving the Intersection Problems in Configuration Space	536
<i>B.R. Donald</i>	
Session 6C: Planning and Learning	
The Mechanics of Manipulation	544
<i>M.T. Mason</i>	
Using Backprojections for Fine Motion Planning with Uncertainty	549
<i>M. Erdmann</i>	
Explanation-Based Manipulator Learning: Acquisition of Planning Ability Through Observation	555
<i>A.M. Segre and G. DeJong</i>	
The Role of Knowledge in the Architecture of a Robust Robot Control.....	561
<i>M. Gini, R. Doshi, M. Gluch, R. Smith, and I. Zualkernan</i>	
Session 6D: Grasping	
Stable Prehension with a Multi-Fingered Hand.....	570
<i>B.S. Baker, S. Fortune, and E. Grosse</i>	
On Grasping Planar Objects with Two Articulated Fingers.....	576
<i>J.M. Abel, W. Holzmann, and J.M. McCarthy</i>	
Pose-Seeking Algorithms for the Control of Dexterous Robot Hands	582
<i>W.J. Palm and P. Datsoris</i>	
A Simple Set of Grasps for a Dexterous Hand.....	588
<i>D.M. Lyons</i>	
Computing the Friction Forces Associated with a Three Fingered Grasp.....	594
<i>W. Holzmann and J.M. McCarthy</i>	

Session 7A: Hybrid and Optimal Control

Hybrid Control of Robot Manipulators.....	602
<i>H. Zhang and R.P. Paul</i>	
Real-Time Cartesian Coordinate Hybrid Control of a PUMA 560 Manipulator.....	608
<i>P.G. Backes, G.G. Leininger, and C.-H. Chung</i>	
On the Optimal Control of Robotic Manipulators with Actuator and End-Effector Constraints.....	614
<i>Z. Shiller and S. Dubowsky</i>	
Optimal/PID Formulation for Control of Robotic Manipulators.....	621
<i>G.L. Luo and G.N. Saridis</i>	
Sensory Feedback Structures for Robots with Supervised Learning.....	627
<i>G. Hirzinger and K. Landzettel</i>	

Session 7B: Robot Manipulator Control

Performance Evaluation of Alternative Robot Controller Architectures Using a Finite-State Machine Emulator.....	638
<i>R.G. Phillips and H.A. Sutherland</i>	
Real-Time Evaluation of Robotic Control Methods.....	644
<i>K.P. Valavanis, M.B. Leahy, Jr., and G.N. Saridis</i>	
Practical Adaptive Control of Actuated Spatial Mechanisms.....	650
<i>H. Durrant-Whyte</i>	
Robustness Issues in Robot Control.....	656
<i>J.-J.E. Slotine</i>	
Dynamic Visual Servo Control of Robots: An Adaptive Image-Based Approach.....	662
<i>L.E. Weiss, A.C. Sanderson, and C.P. Neuman</i>	

Session 7C: Sensing and Control

Control of Tool/Workpiece Contact Force with Application to Robotic Deburring.....	670
<i>T.M. Stepien, L.M. Sweet, M.C. Good, and M. Tomizuka</i>	
Calibration and Use of a Light Stripe Range Sensor Mounted on the Hand of a Robot.....	680
<i>G.J. Agin</i>	
Vision-Guided Robot for Automotive Assembly.....	686
<i>S.R. Sternberg</i>	
A Geometric Approach to Deriving Position/Force Trajectory in Fine Motion.....	691
<i>C.S.G. Lee and D. Huang</i>	

Session 7D: End-Effector Sensing and Control

*High Performance Conformal Skin for Robots.....	700
<i>J.M. Vranish</i>	
Tendon Actuated Exploratory Finger with Polymeric, Skin-like Tactile Sensor.....	701

*Space Applications of Computer Assisted Teleoperator.....	719
<i>J.L. Lacombe, G. Clement, T. Blais, G. Berger, R. Fournier, and J. Vertut</i>	

Session 8A: Kinematics and Trajectories

Kinematic Programming Alternatives for Redundant Manipulators	722
<i>J. Baillieul</i>	
A Unified Approach to Manipulator Modeling	729
<i>M.W. Walker</i>	
Approximate Optimum Paths of Robot Manipulators Under Realistic Physical Constraints	737
<i>C.-S. Lin and P.-R. Chang</i>	
Improved Numerical Solutions of Inverse Kinematics of Robots	743
<i>K.C. Gupta and K. Kazerounian</i>	

Session 8B: Dynamics and Trajectory Planning

*Optimal Trajectories for Robotic Manipulators Using State-Space Networks	750
<i>A.L. Kornhauser and M.L. Brown</i>	
Planning a Minimum-Time Trajectories for Robot Arms	751
<i>G. Sahar and J.M. Hollerbach</i>	
Minimum Time Trajectory Planning	759
<i>V.T. Rajan</i>	
Optimizing Robot Motion Along a Predefined Path	765
<i>G.H. Seeger and R.P. Paul</i>	

Session 8C: Systolic Algorithms and Architectures

Parallelism in Manipulator Dynamics	772
<i>R.H. Lathrop</i>	
A Systolic/Cellular Computer Architecture for Linear Algebraic Operations	779
<i>J.G. Nash</i>	
Pipeline/Parallel Algorithms for the Jacobian and Inverse Dynamics Computations	785
<i>D.E. Orin, H.H. Chao, K.W. Olson, and W.W. Schrader</i>	
Warp as a Machine for Low-Level Vision	790
<i>T. Gross, H.T. Kung, M. Lam, and J. Webb</i>	

Session 8D: Multiprocessor Architectures for Control

A Reconfigurable Multiprocessor Architecture for Reliable Control of Robotic Systems	802
<i>F. Ozguner and M.L. Kao</i>	
GEM: Operating System Primitives for Robots and Real-Time Control Systems	807
<i>K. Schwan, T. Bihari, B.W. Weide, and G. Taulbee</i>	
*Real-Time Multiprocessor-Based Robot Controller	814
<i>S. Ahmad</i>	
A Multiprocessor-Based Controller for the Control of Mechanical Manipulators	815
<i>R. Nigam and C.S.G. Lee</i>	

Session 9A: Interpreting Image Sequences

Visual Map Making for a Mobile Robot	824
<i>R.A. Brooks</i>	
Experiments and Thoughts on Visual Navigation	830
<i>C. Thorpe, L. Matthies, and H. Moravec</i>	
Passive Ranging in Outdoor Environment	836
<i>M.E. Bazakos, D.P. Panda, and D. Duncan</i>	
Octree Generation from Silhouette Views of an Object	843
<i>J. Veenstra and N. Ahuja</i>	

Session 9B: Visual Navigation

Dynamic Scene Analysis for a Mobile Robot in a Man-Made Environment	850
<i>S. Tsuji, Y. Yagi, and M. Asada</i>	
Visual Algorithms for Autonomous Navigation	856
<i>F.P. Andresen, L.S. Davis, R.D. Eastman, and S. Kambhampati</i>	
Visual Navigation of Roadways	862
<i>A.M. Waxman, J. Le Moigne, and B. Srinivasan</i>	
Fast Generation of Chain-Code Image Description	868
<i>R.A. Schmidt</i>	
A Real-Time Iconic Image Processor	873
<i>R. Lumia, M.O. Shneider, and E.W. Kent</i>	

Session 10A: Scheduling and Flexible Cells

Opportunistic Scheduling for Robotic Assembly	880
<i>B.R. Fox and K.G. Kempf</i>	
Automatic Planning and Flexible Scheduling: A Knowledge-Based Approach	890
<i>M.J.P. Shaw and A.B. Whinston</i>	
A Multi-Robot Control Experimental System with Random Parts Arrival	895
<i>O.Z. Maimon</i>	
Programming of Flexible Assembly Cell: Task Modelling and System Integration	901
<i>R. Alami and H. Chochon</i>	

Session 10B: Robot Software Architecture

Communication Primitives for a Distributed Multi-Robot System	910
<i>K.G. Shin and M.E. Epstein</i>	
Computational Architecture for the Utah/MIT Hand	918
<i>D.J. Kriegman, D.M. Siegel, S. Narasimhan, J.M. Hollerbach, and G.E. Gerpheide</i>	
A Distributed Testbed for Active Sensory Processing	925
<i>I. Lee and S.M. Goldwasser</i>	
A Hierarchically Controlled, Sensory Interactive Robot in the Automated Manufacturing Research Facility	931
<i>H.G. McCain</i>	

Session 11A: Advanced Techniques for Robot Control

Robotic Hands with Rheological Surfaces	942
<i>R.W. Brockett</i>	
Manipulator Maneuvering by Feedback Linearization with Saturating Inputs	947
<i>T.A.W. Dwyer, III, M.S. Fadali, N. Chen, and G.K.F. Lee</i>	
Robust Linear Compensator Design for Nonlinear Robotic Control	954
<i>M.W. Spong and M. Vidyasagar</i>	
Robot Arm Dynamic Control by Computer	960
<i>A.K. Bejczy, T.J. Tarn, and Y.L. Chen</i>	

Session 11B: Control of Flexible Manipulators

Compensation Manipulator Flexibility Effects by Modal Space Techniques	972
<i>P. Kärkkäinen</i>	
Invariant Manifolds and Their Application to Robot Manipulators with Flexible Joints	978
<i>K. Khorasani and M.W. Spong</i>	

Dynamics Modelling of a Single-Link Flexible Robot.....	984
<i>F. Rakhsha and A.A. Goldenberg</i>	
Dynamic and Vibration Modeling of a Cartesian Robot.....	990
<i>M.H. Benjamin, A. Garcia-Reynoso, and W.P. Seering</i>	
 Session 12A: Robots with Redundancy	
A Non-Degenerate Orientation Solution of a Four-Jointed Wrist.....	998
<i>M.M. Stanišić and G.R. Pennock</i>	
Manipulability and Redundancy Control of Robotic Mechanisms	1004
<i>T. Yoshikawa</i>	
Industrial Robots with Seven Joints	1010
<i>J.Y.S. Luh and Y.L. Gu</i>	
Redundancy Resolution of Manipulators Through Torque Optimization	1016
<i>J.M. Hollerbach and K.C. Suh</i>	
 Session 12B: Manipulator Dynamics and Control	
Computation of the Inertial and Gravitational Coefficients of the Dynamics	
Equations for a Robot Manipulator with a Load	1024
<i>A. Izaguirre and R.P. Paul</i>	
Dynamic Manipulability of Robot Manipulators	1033
<i>T. Yoshikawa</i>	
Kinematic and Dynamic Analysis of Robot Arm	1039
<i>K. Kosuge and K. Furuta</i>	
Identification of Parameters in Models of Robots with Rotary Joints	1045

Session 1A

Three-Dimensional Machine Vision

A VISION SYSTEM WITH 3D CAPABILITIES

J. AMAT - V. LLARIO

Facultat d'Informàtica
Universitat Politècnica de Catalunya C/ Diagonal N° 12 - 08034 Barcelona (Spain)

ABSTRACT

The first results of a vision system which adds to a 2D image the depth information of certain points are presented. The goal of the system is to provide the control unit of a robot with an approximate 3D description of the industrial part to be manipulated or of the working area.

Depth information about the selected points of the scene is obtained by stereo vision. The determination of disparity is solved by changing the point of view of the TV camera employed by means of two oscillating mirrors which allow continuous tracking of the selected points.

A specialized image processor has been designed to deal with the tasks of selection of outstanding points of objects (vertices) and continuous tracking of these points between consecutive images when displacing the mirrors in order to obtain a short time of calculation as well as a low cost system. That way at the end of each sweep of the mirrors we get the information needed to solve triangulation from pairs of homologous points.

The time spent to get the three dimensional information of the scene is about one second, which corresponds to the time need to get enough intermediate images to guarantee the correct tracking of vertices.

INTRODUCTION

Nowadays there are a lot of vision systems which give a rather good 3D information of the scene.¹ There are different methods of acquiring the depth information but in general they can be classified into three main groups depending on the aspects involved: stereo disparity, structured light projections and range images. Some examples of the mentioned methods are: striped lighting^{2,3,4}, grid coding⁵, relative range from occlusion cues^{6,7,8}, depth from texture^{9,10,11}, range from focusing^{12,13}, shape from shading or surface orientation from image brightness^{14,15}, stereo disparity^{16,17,18}, range from camera motion^{19,20}, range from three orthogonal views²¹, etc.

Most of the three-dimensional vision systems for robotics which at the moment in a development phase share two general characteristics: Powerful informatic requirements and/or a long calculation time. Now, these two reasons make the application of 3D systems in industrial environments quite difficult²². The system presented tries to face these drawbacks by giving up some other features, restricting disparity analysis to some selected points of the scene

in order to get their height above the working plane. This information may be enough to carry out guidance of the robot for a lot of applications if there is a complete information of the object on the X-Y plane. The drastic reduction of points to be analysed has allowed the design of a specialized processor to solve in real time the correspondence problem between two consecutive images.

1.- SYSTEM DESCRIPTION

The system consists on the elements shown in Fig.1. A TV camera mounted with two mobile mirrors which allow it to change the point of view. A signal pre-processor obtains directly during scanning the contour of the object detected on the scene²³ and during a second phase locates the vertices.

Fig. 1 System blocks diagram

A specialized processor deals with tracking tasks during the displacement of the point of view of the scene giving the needed data to a microcomputer at the end of each period. The microcomputer calculates triangulation for each point while the system is tracking vertices of the scene during the next period.
