Intermediate Microeconomics

A Modern Approach

Fourth Edition

PREFACE

The success of the first three editions of *Intermediate Microeconomics* has pleased me very much. It confirmed my belief that the market would welcome an analytic approach to microeconomics at the undergraduate level.

My aim in writing the first edition was to present a treatment of the methods of microeconomics that would allow students to apply these tools on their own and not just passively absorb the predigested cases described in the text. I have found that the best way to do this is to emphasize the fundamental conceptual foundations of microeconomics and to provide concrete examples of their application rather than to attempt to provide an encyclopedia of terminology and anecdote.

A challenge in pursuing this approach arises from the lack of mathematical prerequisites for economics courses at many colleges and universities. The lack of calculus and problem-solving experience in general makes it difficult to present some of the analytical methods of economics. However, it is not impossible. One can go a long way with a few simple facts about linear demand functions and supply functions and some elementary algebra. It is perfectly possible to be analytical without being excessively mathematical.

The distinction is worth emphasizing. An analytical approach to economics is one that uses rigorous, logical reasoning. This does not necessarily imply the use of advanced mathematical methods. The language of mathematics certainly helps to ensure a rigorous analysis, and using it is undoubtedly the best way to proceed when possible, but it may not be appropriate for all students.

Many undergraduate majors in economics are students who *should* know calculus, but don't—at least, not very well. For this reason I have kept calculus out of the main body of the text. However, I have provided complete calculus appendices to many of the chapters. This means that the calculus methods are there for the students who can handle them, but they do not pose a barrier to understanding for the others.

I think that this approach manages to convey the idea that calculus is not just a footnote to the argument of the text, but is instead a deeper way to examine the same issues that one can also explore verbally and graphically. Many arguments are much simpler with a little mathematics, and all economics students should learn that. In many cases I've found that with a little motivation, and a few nice economic examples, students become quite enthusiastic about looking at things from an analytic perspective.

There are several other innovations in this text. First, the chapters are generally very short. I've tried to make most of them roughly "lecture size," so that they can be read at one sitting. I have followed the standard order of discussing first consumer theory and then producer theory, but I've spent a bit more time on consumer theory than is normally the case. This is not because I think that consumer theory is necessarily the most important part of microeconomics; rather, I have found that this is the material that students find the most mysterious, so I wanted to provide a more detailed treatment of it.

Second, I've tried to put in a lot of examples of how to use the theory described here. In most books, students look at a lot of diagrams of shifting curves, but they don't see much algebra, or much calculation of any sort for that matter. But it is the algebra that is used to solve problems in practice. Graphs can provide insight, but the real power of economic analysis comes in calculating quantitative answers to economic problems. Every economics student should be able to translate an economic story into an equation or a numerical example, but all too often the development of this skill is neglected. For this reason I have also provided a workbook that I feel is an integral accompaniment to this book. The workbook was written with my colleague Theodore Bergstrom, and we have put a lot of effort into generating interesting and instructive problems. We think that it provides an important aid to the student of microeconomics.

Third, I believe that the treatment of the topics in this book is more accurate than is usually the case in intermediate micro texts. It is true that I've sometimes chosen special cases to analyze when the general case is too difficult, but I've tried to be honest about that when I did it. In general, I've tried to spell out every step of each argument in detail. I believe that the discussion I've provided is not only more complete and more accurate than usual, but this attention to detail also makes the arguments easier to understand than the loose discussion presented in many other books.

I generally cover consumer theory and markets and then proceed directly to producer theory. Another popular path is to do exchange right after consumer theory; many instructors prefer this route and I have gone to some trouble to make sure that this path is possible.

Some people like to do producer theory before consumer theory. This is possible with this text, but if you choose this path, you will need to supplement the textbook treatment. The material on isoquants, for example, assumes that the students have already seen indifference curves.

Much of the material on public goods, externalities, law, and information can be introduced earlier in the course. I've arranged the material so that it is quite easy to put it pretty much wherever you desire. For example, the material on antitrust law fits naturally in with the discussion of monopoly; tort law can be used to illustrate ideas of efficiency; and criminal law can be used to illustrate consumer choice problems.

Similarly, the material on public goods can be introduced as an illustration of Edgeworth box analysis. Externalities can be introduced right after the discussion of cost curves, and topics from the information chapter can be introduced almost anywhere after students are familiar with the approach of economic analysis.

Changes for the Fourth Edition

The major addition is a new chapter on information technology. The newspapers never tire of telling us that we now live in an "information society." Although everyone talks about the information economy, few have attempted to do serious analysis of the issues. In this chapter I describe some economic models of information networks, of intellectual property enforcement, and of sharing information goods. The point is to show how standard economic techniques of the sort developed in this book can lend significant insight into these issues.

I have also added a more extensive treatment of first- and second-degree price discrimination. Previously I had only a very cursory treatment of nonlinear pricing, since the topic is usually considered too advanced for undergraduates. However, I have now found a way to present the essential analytic points at a very elementary level, using only the standard tools of consumers' surplus analysis. The chapter on "Monopoly Behavior" also contains a nice discussion of bundling, along with examples of this marketing technique drawn from the computer software industry. There are additional discussions of income elasticity, sunk costs, and a few other topics of this sort.

Finally, I have added about a dozen new examples illustrating a variety of economic phenomena. Many of these examples are drawn from hardware and software industries and emphasize the information technology theme of this edition.

The Test Bank and Workbook

The workbook, *Workouts in Intermediate Microeconomics*, is an integral part of the course. It contains hundreds of fill-in-the-blank exercises that lead the students through the steps of actually applying the tools they have learned in the textbook. In the third edition we have added a new section to *Workouts* that contains quizzes. These are short, multiple-choice questions that are often based on the longer fill-in-the-blanks problems. These quizzes give a quick way for the student to review the material he or she has learned by working the problems in the workbook.

But there is more . . . instructors who have adopted *Workouts* for their course can get a free copy of a neat computer program called *Norton TestMaker* that will generate new versions of these questions with different numerical values but the same internal logic. This can be used to make additional problems for students to practice on or make short quizzes to be taken in class.

With these quizzes and *Norton TestMaker* it is possible to generate lots of short questions that students can use to check their progress in understanding microeconomics. Grading is quick and reliable because the quizzes are multiple-choice and can be graded electronically. In our course, we tell the students to work through all the quiz questions for each chapter, either by themselves or with a study group. Then during the term we have a short in-class quiz every other week or so. In these quizzes, students are given newly generated versions of the previously assigned homework questions; these are essentially the homework questions with different numbers. Hence, students who have done their homework find it easy to do well on the quizzes.

We firmly believe that you can't learn economics without working some problems. The quizzes provided in *Workouts* and in *Norton TestMaker* make the learning process much easier for both the student and the teacher.

The Production of the Book

The entire book was typeset by the author using \TeX , the wonderful typesetting system designed by Donald Knuth. \TeX gives the author complete control over the structure and appearance of a document; it is especially convenient for text involving mathematics. I used the standard Unix tools `emacs` for editing and `rcs` for version control. I used Tom Rokicki's \TeX system including his previewer, `TeXView`, and print driver, `dvips`. I used `makeindex` for the index, and Trevor Darrell's `psfig` software for inserting the diagrams.

The book design was by Nancy Dale Muldoon, with some modifications by Roy Tedoff and the author. Marie-Josée A. Schorp was the manuscript editor, and Drake McFeely coordinated the whole effort in his capacity as editor.

Acknowledgments

Several people contributed to this project. First, I must thank my editorial assistants for the first edition, John Miller and Debra Holt. John provided many comments, suggestions, and exercises based on early drafts of this text and made a significant contribution to the coherence of the final product. Debra did a careful proofreading and consistency check during the final stages and helped in preparing the index.

The following individuals provided me with many useful suggestions and comments during the preparation of the first edition: Ken Binmore (University of Michigan), Mark Bagnoli (Indiana University), Larry Chenault (Miami University), Jonathan Hoag (Bowling Green State University), Allen Jacobs (M.I.T.), John McMillan (University of California at San Diego), Hal White (University of California at San Diego), and Gary Yohe (Wesleyan University). In particular, I would like to thank Dr. Reiner Buchegger, who prepared the German translation, for his close reading of the first edition and for providing me with a detailed list of corrections. Other individuals to whom I owe thanks for suggestions prior to the first edition are Theodore Bergstrom, Jan Gerson, Oliver Landmann, Alasdair Smith, Barry Smith, and David Winch.

My editorial assistants for the second edition were Sharon Parrott and Angela Bills. They provided much useful assistance with the writing and editing. Robert M. Costrell (University of Massachusetts at Amherst), Ashley Lyman (University of Idaho), Daniel Schwallie (Case-Western Reserve), A. D. Slivinskie (Western Ontario), and Charles Plourde (York University) provided me with detailed comments and suggestions about how to improve the second edition.

In preparing the third edition I received useful comments from the following individuals: Doris Cheng (San Jose), Imre Csekó (Budapest), Gregory Hildebrandt (UCLA), Jamie Brown Kruse (Colorado), Richard Manning (Brigham Young), Janet Mitchell (Cornell), Charles Plourde (York University), Yeung-Nan Shieh (San Jose), John Winder (Toronto). I especially want to thank Roger F. Miller (University of Wisconsin), David Wildasin (Indiana) for their detailed comments, suggestions, and corrections.

CONTENTS

Preface

xix

1 The Market

Constructing a Model 1 Optimization and Equilibrium 3 The Demand Curve 3 The Supply Curve 5 Market Equilibrium 7 Comparative Statics 9 Other Ways to Allocate Apartments 11 *The Discriminating Monopolist* • *The Ordinary Monopolist* • *Rent Control* • Which Way Is Best? 14 Pareto Efficiency 15 Comparing Ways to Allocate Apartments 16 Equilibrium in the Long Run 17 Summary 18 Review Questions 19

2 Budget Constraint

The Budget Constraint 20 Two Goods Are Often Enough 21 Properties of the Budget Set 22 How the Budget Line Changes 24 The Numeraire 26 Taxes, Subsidies, and Rationing 26 *Example: The Food Stamp Program* Budget Line Changes 31 Summary 31 Review Questions 32

3 Preferences

Consumer Preferences **34** Assumptions about Preferences **35** Indifference Curves **36** Examples of Preferences **37** *Perfect Substitutes* • *Perfect Complements* • *Bads* • *Neutrals* • *Satiation* • *Discrete Goods* • Well-Behaved Preferences **44** The Marginal Rate of Substitution **48** Other Interpretations of the MRS **50** Behavior of the MRS **51** Summary **52** Review Questions **52**

4 Utility

Cardinal Utility **57** Constructing a Utility Function **58** Some Examples of Utility Functions **59** *Example: Indifference Curves from Utility* *Perfect Substitutes* • *Perfect Complements* • *Quasilinear Preferences* • *Cobb-Douglas Preferences* • Marginal Utility **65** Marginal Utility and MRS **66** Utility for Commuting **67** Summary **69** Review Questions **70** Appendix **70** *Example: Cobb-Douglas Preferences*

5 Choice

Optimal Choice **73** Consumer Demand **78** Some Examples **78** *Perfect Substitutes* • *Perfect Complements* • *Neutrals and Bads* • *Discrete Goods* • *Concave Preferences* • *Cobb-Douglas Preferences* • Estimating Utility Functions **83** Implications of the MRS Condition **85** Choosing Taxes **86** Summary **89** Review Questions **89** Appendix **90** *Example: Cobb-Douglas Demand Functions*

6 Demand

Normal and Inferior Goods **96** Income Offer Curves and Engel Curves **97** Some Examples **99** *Perfect Substitutes* • *Perfect Complements* • *Cobb-Douglas Preferences* • *Homothetic Preferences* • *Quasilinear Preferences* • Ordinary Goods and Giffen Goods **103** The Offer Curve and the Demand Curve **106** Some Examples **107** *Perfect Substitutes* • *Perfect Complements* • *A Discrete Good* • Substitutes and Complements **111** The Inverse Demand Function **112** Summary **114** Review Questions **115** Appendix **115**

7 Revealed Preference

The Idea of Revealed Preference **118** From Revealed Preference to Preference **119** Recovering Preferences **121** The Weak Axiom of Revealed Preference **123** Checking WARP **124** The Strong Axiom of Revealed Preference **127** How to Check SARP **128** Index Numbers **129** Price Indices **131** *Example: Indexing Social Security Payments* Summary **133** Review Questions **134**

8 Slutsky Equation

The Substitution Effect **136** *Example: Calculating the Substitution Effect* The Income Effect **140** *Example: Calculating the Income Effect* Sign of the Substitution Effect **141** The Total Change in Demand **142** Rates of Change **143** The Law of Demand **146** Examples of Income and Substitution Effects **146** *Example: Rebating a Tax* Another Substitution Effect **150** Compensated Demand Curves **153** Summary **153** Review Questions **154** Appendix **154** *Example: Rebating a Small Tax*

9 Buying and Selling

Net and Gross Demands **157** The Budget Constraint **158** Changing the Endowment **160** Price Changes **161** Offer Curves and Demand Curves **164** The Slutsky Equation Revisited **166** Use of the Slutsky Equation **168** *Example: Calculating the Endowment Income Effect* Labor Supply **170** *The Budget Constraint* • Comparative Statics of Labor Supply **171** *Example: Overtime and the Supply of Labor* Summary **175** Review Questions **176** Appendix **176**

10 Intertemporal Choice

The Budget Constraint **179** Preferences for Consumption **182** Comparative Statics **183** The Slutsky Equation and Intertemporal Choice **184** Inflation **186** Present Value: A Closer Look **188** Analyzing Present Value for Several Periods **189** Use of Present Value **190** *Example: Valuing a Stream of Payments* *Example: The True Cost of a Credit Card* Bonds **194** *Example: Installment Loans* Taxes **196** *Example: Scholarships and Savings* Choice of the Interest Rate **197** Summary **198** Review Questions **198**

11 Asset Markets

Rates of Return **199** Arbitrage and Present Value **201** Adjustments for Differences among Assets **201** Assets with Consumption Returns **202** Taxation of Asset Returns **203** Applications **204** *Depletable Resources* • *When to Cut a Forest* • *Example: Gasoline Prices during the Gulf War* Financial Institutions **208** Summary **209** Review Questions **210** Appendix **210**

12 Uncertainty

Contingent Consumption **212** Utility Functions and Probabilities **216** *Example: Some Examples of Utility Functions* Expected Utility **217** Why Expected Utility Is Reasonable **218** Risk Aversion **220** *Example: The Demand for Insurance* Diversification **224** Risk Spreading **224** Role of the Stock Market **225** Summary **226** Review Questions **226** Appendix **227** *Example: The Effect of Taxation on Investment in Risky Assets*

13 Risky Assets

Mean-Variance Utility **230** Measuring Risk **235** Equilibrium in a Market for Risky Assets **237** How Returns Adjust **238** *Example: Ranking Mutual Funds* Summary **242** Review Questions **242**

14 Consumer's Surplus

Demand for a Discrete Good **244** Constructing Utility from Demand **245** Other Interpretations of Consumer's Surplus **246** From Consumer's Surplus to Consumers' Surplus **247** Approximating a Continuous Demand **247** Quasilinear Utility **247** Interpreting the Change in Consumer's Surplus **248** *Example: The Change in Consumer's Surplus* Compensating and Equivalent Variation **250** *Example: Compensating and Equivalent Variations* *Example: Compensating and Equivalent Variation for Quasilinear Preferences* Producer's Surplus **254** Calculating Gains and Losses **256** Summary **257** Review Questions **258** Appendix **258** *Example: A Few Demand Functions* *Example: CV, EV, and Consumer's Surplus*

15 Market Demand

From Individual to Market Demand **261** The Inverse Demand Function **263** *Example: Adding Up "Linear" Demand Curves* Discrete Goods **264** The Extensive and the Intensive Margin **264** Elasticity **265** *Example: The Elasticity of a Linear Demand Curve* Elasticity and Demand **267** Elasticity and Revenue **268** *Example: Strikes and Profits* Constant Elasticity Demands **271** Elasticity and Marginal Revenue **272** *Example: Setting a Price* Marginal Revenue Curves **274** Income Elasticity **275** Summary **276** Review Questions **277** Appendix **278** *Example: The Laffer Curve* *Example: Another Expression for Elasticity*

16 Equilibrium

Supply **284** Market Equilibrium **284** Two Special Cases **285** Inverse Demand and Supply Curves **286** *Example: Equilibrium with Linear Curves* Comparative Statics **288** *Example: Shifting Both Curves* Taxes **289** *Example: Taxation with Linear Demand and Supply* Passing Along a Tax **293** The Deadweight Loss of a Tax **295** *Example: The Market for Loans* *Example: Food Subsidies* Pareto Efficiency **301** *Example: Waiting in Line* Summary **303** Review Questions **304**

17 Technology

Inputs and Outputs **305** Describing Technological Constraints **306**
 Examples of Technology **307** *Fixed Proportions* • *Perfect Substitutes*
 • *Cobb-Douglas* • Properties of Technology **309** The Marginal Product
310 The Technical Rate of Substitution **311** Diminishing Marginal
 Product **312** Diminishing Technical Rate of Substitution **312** The
 Long Run and the Short Run **313** Returns to Scale **313** Summary
315 Review Questions **316**

18 Profit Maximization

Profits **317** The Organization of Firms **319** Profits and Stock Market
 Value **319** Fixed and Variable Factors **321** Short-Run Profit Max-
 imization **321** Comparative Statics **323** Profit Maximization in the
 Long Run **324** Inverse Factor Demand Curves **325** Profit Maximiza-
 tion and Returns to Scale **326** Revealed Profitability **327** *Exam-
 ple: How Do Farmers React to Price Supports?* Cost Minimization **331**
 Summary **331** Review Questions **332** Appendix **333**

19 Cost Minimization

Cost Minimization **335** *Example: Minimizing Costs for Specific Tech-
 nologies* Revealed Cost Minimization **339** Returns to Scale and the
 Cost Function **340** Long-Run and Short-Run Costs **342** Fixed and
 Quasi-Fixed Costs **344** Sunk Costs **344** Summary **345** Review
 Questions **345** Appendix **346**

20 Cost Curves

Average Costs **349** Marginal Costs **351** Marginal Costs and Variable
 Costs **353** *Example: Specific Cost Curves* *Example: Marginal Cost
 Curves for Two Plants* Long-Run Costs **357** Discrete Levels of Plant
 Size **359** Long-Run Marginal Costs **361** Summary **362** Review
 Questions **362** Appendix **363**

21 Firm Supply

Market Environments **365** Pure Competition **366** The Supply Decision of a Competitive Firm **368** An Exception **370** Another Exception **371** *Example: Pricing Operating Systems* The Inverse Supply Function **373** Profits and Producer's Surplus **373** *Example: The Supply Curve for a Specific Cost Function* The Long-Run Supply Curve of a Firm **377** Long-Run Constant Average Costs **378** Summary **379** Review Questions **380** Appendix **381**

22 Industry Supply

Short-Run Industry Supply **383** Industry Equilibrium in the Short Run **384** Industry Equilibrium in the Long Run **385** The Long-Run Supply Curve **387** *Example: Taxation in the Long Run and in the Short Run* The Meaning of Zero Profits **391** Fixed Factors and Economic Rent **392** *Example: Taxi Licenses in New York City* Economic Rent **394** Rental Rates and Prices **396** *Example: Liquor Licenses* The Politics of Rent **397** *Example: Farming the Government* Energy Policy **399** *Two-Tiered Oil Pricing • Price Controls • The Entitlement Program* • Summary **402** Review Questions **403**

23 Monopoly

Maximizing Profits **406** Linear Demand Curve and Monopoly **407** Markup Pricing **409** *Example: The Impact of Taxes on a Monopolist* Inefficiency of Monopoly **411** Deadweight Loss of Monopoly **413** *Example: The Optimal Life of a Patent* Natural Monopoly **416** What Causes Monopolies? **418** *Example: Diamonds Are Forever* *Example: Pooling in Auction Markets* Summary **421** Review Questions **422** Appendix **423**
