Glossary of Terms	18
-----------------------------	----

PART 1 INTRODUCTION TO TREATMENT OF WASTEWATER AND POTABLE WATER IN FLUIDISED BEDS

Chapter 1 Immobilised biomass — a basis for process development in wastewater treatment

B. Atkinson, Department of Chemical Engineering, University of Manchester Institute of Science and Technology, UK

1.1	Introduction	22
1.2	Objectives	23
1.3	Theoretical principles and methodology	27
1.4	Concluding remarks	32
1.5	References	34
1.6	Nomenclature	34

Chapter 2 Fluidised beds in water treatment — a short historical introduction

D. G. Miller, Water Research Centre, Medmenham Laboratory, UK

2.1	Introduction	35
2.2	Terminology	35
2.3	Clarification	36
2.4	Biological treatment	41
2.5	Softening	44
2.6	References	46

Chapter 3 Removal of ammonia and nitrate in the treatment of potable water

R. B. Gauntlett, Water Research Centre, Medmenham Laboratory, UK

3.1	Introduction	48
3.2	Ammonia removal	51
3.3	Nitrate removal	53
3.4	References	58
Discussion		59

PART 2 BASIC PRINCIPLES OF FLUIDISED BEDS

Chapter 4 Fluid mechanics and aeration characteristics of fluidised beds

J. C. Lee and P. S. Buckley, Department of Chemical Engineering,
University College of Swansea, UK

4.1	Introduction	62
4.2	Onset of fluidisation	62
4.3	General character of gas dispersion	64
4.4	Gas dispersions in large particle beds	67
4.5	Gas-liquid mass transfer coefficients	70
4.6	Conclusions and recommendations	72
4.7	Symbols used	73
4.8	References	74

Chapter 5 The characteristics of solid supports and biomass support particles when used in fluidised beds

B. Atkinson, G. M. Black and A. Pinches, Department of Chemical
Engineering, University of Manchester Institute of Science and Tech-
nology, UK

5.1	Introduction	75
5.2	Choice of support particles	78
5.3	Particle properties	82
5.4	Reactors with steady particle biomass hold-up	89
5.5	Reactors with accumulating particle biomass hold-up	97
5.6	Concluding remarks	102
5.7	References	104
5.8	Nomenclature	105
Discussion		107

PART 3 TREATMENT OF SEWAGE IN FLUIDISED BEDS**Chapter 6 Secondary treatment of municipal wastewater with fluidised bed technology**

J. S. Jeris and R. W. Owens, Ecolotrol Inc., USA; **F. Flood**, Nassau County Department of Public Works, USA

6.1	Introduction	112
6.2	Pilot plant description	112
6.3	Results of pilot plant operation	115
6.4	Design of Bay Park wastewater facility	117
6.5	References	120

Chapter 7 Complete treatment of sewage in a two-fluidised bed system

P. F. Cooper and D. H. V. Wheeldon, Water Research Centre, Stevenage Laboratory, UK

7.1	Introduction	121
7.2	Experimental programme	122
7.3	Characterisation of the anoxic fluidised-bed reactor	124
7.4	Characterisation of the oxygenic reactor using anoxic-reactor effluent	139
7.5	Conclusions	142
7.6	Acknowledgements	143
7.7	References	143

Chapter 8 Steady- and -non-steady-state performance of the aerobic (oxygenic) biological fluidised bed

S. G. Nutt, Dearborn Environmental Consulting Services, Canada,

J. P. Stephenson, Wastewater Technology Centre, Canada, and

J. H. Pries, Canviro Consultants Limited, Canada

8.1	Introduction	145
8.2	Description of pilot-scale fluidised-bed system	146
8.3	Steady-state performance	146
8.4	Performance under diurnal loading conditions	148
8.5	Dynamic modelling of the fluidised-bed process	150
8.6	Conclusions	158
8.7	Acknowledgements	159
8.8	References	159

Discussion	161
-----------------------------	------------

Chapter 9 United States Environmental Protection Agency research and current thinking on fluidised-bed biological treatment

E. T. Oppelt and J. M. Smith, United States Environmental Protection Agency, USA

9.1	Background	165
-----	----------------------	-----

9.2	Experimentation	166
9.3	Conclusions	176
9.4	Future prospects for fluidised systems	177
9.5	References	178
Chapter 10 Fluidised sand recycle reactor for aerobic biological treatment of sewage		
O. A. Sehic, Melbourne and Metropolitan Board of Works, Australia		
10.1	Introduction	179
10.2	Materials and methods	180
10.3	Definitions	182
10.4	Results and discussion	183
10.5	Conclusions	188
10.6	Acknowledgements	188
10.7	References	188
Discussion		190
Chapter 11 Biological wastewater treatment in a three-phase fluidised-bed reactor		
B. Chatib, A. Grasmick, S. Elmaleh and R. Ben Aim, Université des Sciences et Techniques du Languedoc, France		
11.1	Introduction	192
11.2	Material and methods	192
11.3	Experimental results	194
11.4	Model of biological fluidised-bed treatment	198
11.5	Conclusions	202
11.6	Acknowledgement	203
11.7	Notation	203
11.8	References	204
Chapter 12 Denitrification of domestic wastewater in an upflow sludge-blanket reactor without carrier material for the biomass		
A. Klapwijk, H. Smit and A. Moore, Department of Water Pollution Control, Agricultural University, Wageningen, The Netherlands		
12.1	Introduction	205
12.2	Preliminary experiments with a small system	206
12.3	Start-up of the 100-litre reactor	209
12.4	Treatment of 750-litres per day settled domestic sewage in a 'two-sludge system with preliminary denitrification'	211
12.5	Treatment of 2160-litres per day settled domestic wastewater in a 'two-sludge system with preliminary denitrification'	212
12.6	Conclusions	215

12.7	Acknowledgements	215
12.8	References	215
Discussion		217

PART 4 TREATMENT OF INDUSTRIAL WASTEWATER

Chapter 13 The technology and economics of the treatment of a concentrated nitrogenous industrial effluent by biological denitrification using a fluidised-bed reactor

Mrs. J. Bosman and F. Hendricks, AECI Limited, South Africa

13.1	Introduction	222
13.2	Characteristics of the wastewater	222
13.3	Previous investigations	223
13.4	Laboratory studies	224
13.5	Pilot plant studies	227
13.6	Effluent treatment costs	231
13.7	Conclusions	232
13.8	References	232

Chapter 14 Biological denitrification of high-nitrate wastes generated in the nuclear industry

C. W. Francis and C. W. Hancher, Oak Ridge National Laboratory, USA

14.1	Introduction	234
14.2	Nitrate wastes in the nuclear industry	234
14.3	Factors influencing rates of denitrification of various waste streams in the nuclear industry	235
14.4	Bench-scale tests	241
14.5	Process development unit	245
14.6	Conclusions	248
14.7	Disclaimer and acknowledgement	249
14.8	References	249

Chapter 15 Development of the attached microbial film expanded-bed process for aerobic and anaerobic waste treatment

W. J. Jewell, Cornell University, USA

15.1	Introduction	251
15.2	Objectives	252
15.3	Background	252
15.4	Materials and methods	254
15.5	Results	255
15.6	Discussion	263
15.7	Summary and conclusions	264
15.8	Acknowledgements	265
15.9	References	265

Discussion		268
----------------------	--	-----

PART 5 PROCESS ENGINEERING OF FLUIDISED BEDS**Chapter 16 The use of plastic, porous biomass supports in a pseudo-fluidised bed for effluent treatment****I. Walker and E. P. Austin, Simon Hartley Limited, UK**

16.1	Introduction.	272
16.2	Experimental details	272
16.3	Conclusions	282
16.4	References.	282
16.5	Appendix: An example of a proposed CAPTOR installation . . .	283

Chapter 17 Dorr-Oliver's Oxitron SystemTM fluidised-bed water and wastewater treatment process**P. M. Sutton, W. K. Shieh and P. Kos, Dorr-Oliver Incorporated, USA****P. R. Dunning, Dorr-Oliver Company Limited, UK**

17.1	Introduction.	285
17.2	Process and component design principles	285
17.3	Process and component design information and performance results	287
17.4	Design conclusions.	297
17.5	Oxitron system economics	299
17.6	Acknowledgements	300
17.7	References.	300

Discussion	301
-----------------------------	-----

PART 6 PROCESS ECONOMICS**Chapter 18 Economic studies of biological fluidised-beds for wastewater treatment****D. H. V. Wheeldon and R. W. Bayley, Water Research Centre, Stevenage Laboratory, UK**

18.1	Introduction.	306
18.2	Sources of cost data and method of economic assessment	308
18.3	BFB systems compared with conventional activated-sludge treatment	308
18.4	Discussion	315
18.5	Conclusions	319
18.6	Acknowledgements	320
18.7	References.	320
18.8	Appendix A — Costing of oxygen	321
18.9	Appendix B — Assumptions made in sizing BFB and AS plant items	325

Chapter 19 Biological fluidised-bed denitrification of surface water. The economics of a remedy for nitrate in drinking water

R. Gregory and I. Sheiham, Water Research Centre, Medmenham Laboratory, UK

19.1	Introduction	329
19.2	Remedies considered	331
19.3	Assumptions and conditions of the calculations	332
19.4	Cost comparisons	335
19.5	Conclusions	350
19.6	References	350
Discussion		351

APPENDIX I – SUPPLEMENTARY CONTRIBUTIONS

(i)	Denitrification of sewage effluent on a full-scale using an expanded bed	357
	J. E. Hawkins, D. A. Stott, R. L. Stokes and A. Clennett , Thames Water Authority, UK	
(ii)	Sand/biomass separation with production of a concentrated sludge	361
	P. F. Cooper, D. H. V. Wheeldon, P. E. Ingram-Tedd and D. W. Harrington , Water Research Centre, Stevenage Laboratory, UK	
(iii)	Fluidised bed for the WRC Coleshill Experimental Plant	368
	D. H. V. Wheeldon, P. F. Cooper, R. F. Brazier and P. E. Ingram-Tedd , Water Research Centre, Stevenage Laboratory, UK	
(iv)	An anaerobic fluidised-bed reactor for the treatment of industrial waste water containing chlorophenols	374
	R. Hakulinen , Enso-Gutzeit Osakeyhtio Research Centre, and M. Salkinoja-Salonen , University of Helsinki, Finland	
(v)	BOD removal in fluidised beds: high biomass concentration or high oxygen transfer?	383
	J. P. Vanderborght and Ch. Gilliard , Université Libré de Bruxelles, Belgium
